About this guide

This guide discusses Workforce Management Request Management features from the perspective of a Workforce Management administrator, manager, and scheduler.

Intended audience

This guide is designed to be used by administrators of the Workforce Management portion of the Workforce Optimization Solution. Users are expected to be experienced in working with contact center equipment and software applications, and PC workstation hardware and software.

Documentation feedback

We strive to produce the highest-quality documentation products and welcome your feedback. If you have comments or suggestions about our guides or help, you can email us. With your feedback, include the following information:

- Document name and revision number or title of help topic and product version
- Your suggestion for correcting or improving the documentation

Send your messages to userguides@verint.com.

The email address is only for documentation feedback. If you have a technical question, contact Technical Support.

Technical support

Our goal at Verint Systems is to provide you with the best products backed by a high-quality support network with various resource options. Verint Systems Technical Support services include email and telephone support.

To learn more about the support options that best suit your needs, visit us at Customer Engagement Support.

Verint Learning

In addition to documentation, help, and support services, Verint also offers both instructor-led and self-paced learning options to suit your specific needs.

To learn more about available training options from Verint, visit us at connect.verint.com/learn.

Document revision history

Revision	Description of changes
1.40	In *Create a special day*, updated the content to emphasize that a special day must be associated with at least one time-off pool.
1.39	Updates for 1136: • To support accessibility enhancements, in the chapter, *Managing employee requests*, added the topic: *View the My Time Off Calendar (WCAG)*. Viewing the My Time Off Calendar in this format from the My Home module is currently being rolled out to cloud customers. It may not be available in your site just yet. • In the chapter, *Submitting requests for employees*, under *Submitting shift bids for auctions (for employees)*, and *Submit multiple, grouped shift bids for a Full Schedule Period auction (for employees)*, after the step to select **Save Preferences**, added a note stating that if you exceeded the maximum number of bids per employee, the system only saves the maximum number of bid option preferences.
1.38	Updates for 1134: In the chapter, *Running a shift bidding auction*, under *Create a shift bidding auction* and *Schedule Auctions: Settings page*, the following updates were made: • For the **Auction Name** setting, stated that auctions are sorted by scheduling period, from the future to the past in ascending order. • For the **Group Bid Options** setting, added a note, stating that the two grouping options that include organization are *not* available if an organization is specified by the **Organization(s)** setting or the setting, **By Organization** - **Employees can bid only on their organization schedule** is selected.
1.37	Made the following update: In *Swap request and swap posting overview*, added a note, stating that if employees involved in a shift swap are poolers belonging to different campaigns, and the shift swap is approved, activities from either campaign are transferred to each other, regardless of the skill sets present in the respective campaign queues.

Confidential and Proprietary Information of Verint Systems Inc.

Revision	Description of changes
1.36	Updates for 1130: In the chapter, *Running a shift bidding auction*, make the following updates: • Renamed the previous topic, *Add a template description*, to the new topic, *Set auction template options*. Rewrote this topic to describe the new behavior on the Schedule Auctions screen on the Schedules tab, including updating the total number of bid options for the selected template, and searching and filtering templates. • In the topic, *Schedules list page*, added descriptions of the new columns: **Total**, **Submitted**, and **Approved**. • Added the new topic, *Schedules filter settings*, which describes the specific filter settings for the Schedules table. An additional update includes the following: In the chapter, *Setting up time-off requests*, in *Time-off pools overview*, added the subtopic, **Organization time zones in daily allocations time-off pool**, which explains that when employees submit time-off requests for a daily allocation time-off pool, the requested time off is converted to their organization time zone and hours are deducted from the daily pool based on the organization time zone.
1.35	Updates for 1128: In the chapter, *Managing employee requests*, under *Create a filter for viewing requests* and *Employee Requests page: Time-off request filter view*, removed the note indicating that the **Add to Waitlist** action is currently being rolled out to cloud customers and might not be available in your site yet. This option is now available for all customers.
1.34	Updates for 1124: In the chapter, *Running a shift bidding auction*, under *Create a shift bidding auction*, and *Schedule Auctions: Settings page*, added the new setting, **Dynamic Ranks**, which determines the effective date by which an employee's rank for an auction is based.
1.33	Updates for 1120: • In the chapter, *Managing employee requests*, under *Create a filter for viewing requests* and *Employee Requests page: Time-off request filter view*, for the **Actions** column description, added the list of possible actions for time-off requests, including the new **Add to Waitlist** option. • In the chapter, *Setting up time-off requests*, in *Assign employees to a time-off pool and allocate time-off hours*, added a step describing how to revert the update of a time-off pool back to the default pool by selecting a **Revert** icon.

Confidential and Proprietary Information of Verint Systems Inc.

Revision	Description of changes
1.32	Updates for 1116: • In the chapter, *Running a shift bidding auction*, under *Create a shift bidding auction* and *Schedule Auctions: Settings page*, added the auction setting, **Combine Shifts**. This setting determines whether shifts that are adjacent to each other that cross the day boundary are combined into one shift. • In the chapter, *Setting up time-off requests*, under *Define validation rules for time-off requests* and *Time-off request validation rules*, removed the note indicating that the validation, **Request does not overlap with approved time-off requests**, is currently being rolled out to Cloud customers. This validation rule is now available for all customers. Additional update: In the chapter, *Setting up flex time requests*, under *Define validation rules for flex time requests*, and *Flex time request validation rules*, updated the rule: **Maximum duration of Flex Time Request: <number> <Minutes or Hours>** to specify that the maximum duration includes flex time-off duration, and any consecutive requests enabled for Flex Time.
1.31	In the chapter, *Setting up time-off requests*, under *Assign employees to a time-off pool and allocate time-off hours*, made the following updates to two topics: • In the *Time-Off page* topic, updated the **Balance** and **Date Last Updated** fields to clarify that the **Date Last Updated** value is the date *from which the time-off balance is effective*, and *not* the last date the balance was updated. • In *View history of time-off balances*, rewrote this topic to clarify the meaning of the date range and the historical information displayed on this page.
1.30	Updates for 2024R1: • Throughout the guide, for the ability to group shift bid options, removed the note stating that the feature is for Cloud customers only. • In the *Update an auction schedules and employee list* and the *Close a shift bidding auction* topics, removed the note stating that the **Update Schedule** auction setting and related behavior are currently being rolled out to cloud customers.
1.29	Update for 1048: In *Time-off request validation rules*, added a new time-off validation, **Request does not overlap with approved time-off requests**.
1.28	Updates for 1042: • In the chapter, *Submitting requests for employees*, rewrote a new section, *Submitting shift bids for auctions*, that describes how to submit shift bid requests for employees, including how to group shift bid options. • In the chapter, *Running a shift bid auction*, under *Create a shift bidding auction*, updated the topic, *Schedule Auctions: Settings page*, to include two new settings: **By Skills** and **Group Bid Options**.

Confidential and Proprietary Information of Verint Systems Inc.

Revision	Description of changes
1.27	Update for 1040: Under *Define validation rules for time-off requests*, and in *Time-off request validation rules*, renamed the validation rule, **Employee has enough time off hours** to the new name, **Employee's time off balance has reached a value lower than the minimum allowed balance of <zero (0.00) or negative (-) n> hours.**
1.26	Updates for 1038: • In the chapter, *Setting up time-off requests*, in the topic, *Add a reference schedule for one or more employees*, added the subtopic, **Recalculation of time-off requests applies to daily defaults**, which explains the recalculation process of time-off requests. • In the chapter, *Running a shift bidding auction*, under *Create a shift bidding auction*, in the topic, *Schedule Auctions: Settings page*, added the new auction setting, **Update Schedule**, which locks existing phantom schedules on the Calendar. • In the topic, *Update an auction schedules and employee list*, added a note, describing the circumstances under which existing phantom schedules, saved shift bidding requests, and bidding preferences are affected when schedule updates occur. • In the topic, *Close a shift bidding auction*, added content stating that if you locked phantom schedules on the Calendar by selecting the **Update Schedule** auction setting, the system automatically deletes phantom schedules assigned to employees, and unlocks the remaining phantom schedules *not* assigned to employees.
1.25	Under *Time-off pools overview*, *Create a time-off pool*, and *Time-Off Pools page*, for **Waitlist sort priorities**, added a detailed list of the priorities and tips related to sorting.
1.24	General updates: • In the *Setting up time-off requests* chapter, under *Assign employees to a time-off pool and allocate time-off hours*, in *Time-Off page*, in the **Reference Schedule** section, clarified that a reference schedule is available for selection when it is a past, present, *or future* published single week schedule assigned to the employee.
1.23	Updates for 15.2 2023R1 1020: • Renamed the chapter, *Creating auto breaking rules*, to *Creating Shift optimization rules*, and rewrote the entire chapter to describe the functionality of optimizing working shift events in shift assignments. This chapter includes a new overview, process flow, examples, an updated task, and updated parameters and descriptions. • Added a link to the how to video on creating and managing shift optimization rules.
1.22	In the *Managing employee requests* chapter, in the *Process individual requests* topic, added a note stating that before approving overlapping time off requests, make sure that the employee understands that once the overlapping time off requests are approved, they *cannot* withdraw them.

Confidential and Proprietary Information of Verint Systems Inc.

Revision	Description of changes
1.21	Made the following updates: • In *Running a shift bidding auction*, under *Add employees to an auction at the same time*, *Employees page*, updated the **Rank** column. • In *Submitting requests for employees*, under *Submit multiple shift bid requests for an employee*, *Bid Options page*, added a description of the column, **Bid Rank**.
1.20	Updates for 15.2 2022R1 1014: • In the *Shift requests & changes settings* topic, updated the description for *Allow requests for regular (non-overtime) extensions during a gap*. In addition to shift/overtime gaps, this setting now covers custom gaps. • In the *Shift Request and changes validation rules* topic, updated the following rule to include shift gap activities: **Minimum duration of the activity** <activity name> **is** <number of> **Minutes** or **Hours after an extension during the activity**. • In the *Auto breaking rules overview* topic, updated Auto breaking rules effect on gaps section to indicate that shift requests and changes support an extension in a custom gap. • In the **Shift Request and change form** topic, added a Extension During a Shift section. • In the **Flex time request form** topic, under **Flex Makeup information**, added a note for **Activity**, indicating that the list of activities that appear in this drop-down field and are available for selection are the activities defined in the employee's work pattern.
1.19	• Added the topic: *Swap request and swap posting overview*. Updates for 15.2 2021R1 928: • In the *Flex time validation rules* topic, updated the following rule to include shift gap activities: **Minimum duration of the activity** <activity name> **is** <number of> **Minutes** or **Hours after a make-up extension during the activity**. • In the *Flex time settings* topic, updated the description for *Allow makeup extensions in shift gaps*. In addition to shift/overtime gaps, this setting now covers custom gaps. • In the *Auto breaking rules overview* topic, added *Auto breaking rules effect on gaps* section.

Confidential and Proprietary Information of Verint Systems Inc.

Revision	Description of changes

1.18	Updates for 15.2 2021R1 926
	• In the *Shift requests & changes validation rules* topic, the following two rules were updated:
	  ▪ Maximum paid duration allowed <*number*> minutes per <*Organization Day or 24 Hour Period*>
	  ▪ Minimum paid duration allowed <*number*> minutes per <*Organization Day or 24 Hour Period*>
	• In the *Flex time request validation rules* topic, the following changes were made:
	  ▪ The Maximum paid duration allowed <*number*> minutes per <*Organization Day or 24 Hour Period*> was updated.
	  ▪ A new validation rule was added: Minimum paid duration allowed <*number*> minutes per <*Organization Day or 24 Hour Period*>.
	• In the *Shift swap request validation rules* topic, the Maximum paid duration allowed <*number*> minutes per <*Organization Day or 24 Hour Period*> was updated.

Confidential and Proprietary Information of Verint Systems Inc.

Revision	Description of changes

1.17	• In the *Flex time settings* topic, added **Allow makeup extensions on a non-working day**.
	• In the *Flex time validation rules* topic, added the following rule: **Maximum consecutive working days allowed as per organization settings.**
	• In the *Create a flex time request for an employee* topic, updated with information about making up time on a non-working day.
	• For flex time requests and shift requests & change requests, made updates to support *adjustable breaks activities*. When adjustable break activities are created and the Request Management setting is turned on, employees can request to make up time by working during their break.
	  ▪ In the *Flex time settings* topic for organization settings, added **Allow makeup extension in adjustable breaks**.
	  ▪ In the *Flex time request validation rules* topic, added a new rule: **Minimum duration of the activity** <adjustable break activity> **is** <number of> **Minutes** or **Hours after a make-up extension during the activity**.
	  ▪ In the *Shift requests & changes settings* topic, added **Allow requests for regular (non-overtime) extension during adjustable breaks**.
	  ▪ In the *Shift requests and changes validation rules* topic, added a new rule: **Minimum duration of the activity** <adjustable break activity> **is** <number of> **Minutes** or **Hours** after an extension during the activity.
	  ▪ In the *Auto breaking rules overview* topic, added information about how auto breaking rules effect adjustable breaks.
	• In the *Shared request Settings* topic, a setting was added: **When approving work requests**. This setting provides the option to publish full days when approving requests.
	• In the *Flex time request validation rules* topic, added three options to the rule that requires make-up time to be made-up in a specific time period.
	• In the *Time Off Pools page* topic, under the Time Off Waitlist section, added the following setting: Allow denied requests to be added to the waitlist.

1.16	Updated the following topics: • In the *Recommended workflow: Run a shift bidding auction* topic, moved the *Close a shift bidding auction* topic after the *Approve all shift bed requests without violations* topic. • In the *Close a shift bidding auction* topic, updated the introductory paragraph.
1.15	Updates for 15.2 2021R1: See the updates listed for V15.2 HFR8 0810, 0812, and 0814.

Confidential and Proprietary Information of Verint Systems Inc.

Revision	Description of changes
1.14	In *Time-off request validation rules*, changed the name of the validation rule: **Request avoids blackout days for the Time Off Pool** to **Request avoids days where time off is not allowed**, and changed the description to: This rule is violated if the request covers a day where time off is *not* allowed.
1.13	Updates for 15.2 2020R1 HFR8 814: • Updated the Bid Options topic. Under the Multiple shifts per day auction, deleted the list item that states only one activity is allowed when bidding on multiple shift blocks on a specific day. This restriction no longer exists.
1.12	Updates for 15.2 2020R1 HFR8 812: • Updated multiple topics about special days to indicate that special days can be created for a single time off pool when needed.
1.11	In the *Shared request settings* topic, updated the description for the following setting: Limit employees' schedule viewing to the following organizations. Updates for 15.2 2020R1 810: • Updated the *Special Days list* topic with information about the list view and date range selector. • Added the following shift swap validation rule: Both employees have the required skills to work the swapped shifts. • Updated the *Shift Swap Request Details* topic, Request Summary section. Primary skill for the shift was added. • In the Managing requests chapter, added the following topic: *Request expiration rules*.

1.10	Updates for 15.2 2020R1:
	• The following topics were updated to indicate that special days now includes Time Off Not Allowed:
	  ▪ *Create a special day*
	  ▪ *Special days settings page*
	  ▪ *Import special days*
	• Topics and content about Blackout days were deleted.
	• Added the *Time off waitlist feature setup* topic.
	• See the updates listed for V15.2 HFR7 0712, 0714, and 0716.

1.09	Updates for V15.2 HFR7 0716: • The following Time Off request and Flex Time requests netstaffing validation rule was enhanced to include a queue value: A maximum of <number> percent of changed intervals improves net staffing based on all queues that the employee is <eligible to work *or* assigned to work> for the request duration.

Confidential and Proprietary Information of Verint Systems Inc.

Revision	Description of changes
1.08	Updates for V15.2 HFR7 0714: • In the Time off settings topic, under Time Off Request options section, a setting was added: Time Off Hours Request Options. Previously, this setting was labeled Time Off Request Types Enabled and on the Settings page (in System Management, under General Settings). The setting was renamed to be consistent with the label used on the Time Off request form.

1.07	Updates for V15.2 HFR7 0712:
	• In the *Time off settings* topic, the following changes were made:
	  ▪ Under *Time Off Request options*, a new setting was added: Include waitlist in time off pool validation.
	  ▪ Under *Time Off Accural*, a new setting was added for biweekly accrual. The name of the settings for monthly and and weekly acrual were changed to be consistent.
	• In the *Shift request and changes settings* topic, the following changes were made:
	  ▪ The settings were organized to match the new organization in the system.
	  ▪ The *Enforce the gap for overtime extension requests* setting was updated to show that it now accepts a value up to 24 hours.
	  ▪ The *Allow requests to modify shift selection* setting was added.

1.06	Updates for 15.2 HFR7: • In the *Flex time request validation rules* topic, a new validation rule was added. This rule allows an organization to require a minimum percentage of changed intervals in a flex time request to approve net staffing. • In the *View employee requests* topic, updated the instructions for viewing requests that start in a specific date range. • See the updates listed for V15.2 HFR6 0610

1.05	Updates for V15.2 HFR6 0610:
	• In the *Setting up time-off requests* chapter
	  ▪ In the *Time-off request settings* topic, added a new setting: Add to Waitlist option selected by default for Time Off Requests.
	  ▪ In the *Time-off validation request rules* topic, updated the name and description of the rule that validates net staffing improvement.
	• In the *Setting up shift requests and changes* chapter, the *Shift request & changes validation rules* topic, the name and description of the rule that validates net staffing improvement was updated.
	• In the *Running a shift bidding auction* chapter, updated the topic: *Update schedules in an auction* to *Update an auction schedules and employee list*.

Confidential and Proprietary Information of Verint Systems Inc.

Revision	Description of changes
1.04	Updates for V15.2 HFR6: • In the *Setting up time off request* chapter, added the following topic: *Delete a reference schedule for one or more employees.*

1.03	Updates for V15.2 HFR5:
	• Added a new chapter about Auto breaking rules. These rules specify where non-work shift events are automatically placed when a request adds or removes time from a shift is approved.
	• Changes to the Request Management Settings page:
	  ▪ Time Off Request Options: A new setting was added to default the From time and To time in the Select Date Range box to Hours of Operation instead (instead of 12 AM and 11:59 PM).
	  ▪ Shift Requests and Change: A new setting was added to control whether employees can change the start time of existing shifts.
	  ▪ Added a section for the new Auto breaking feature. The setting works with auto breaking rules for time off requests.
	• When importing daily time off hours, blackout days can be imported.
	• On the Auction Settings page, added the setting Continuous Bid. This setting used with the Include Previously Schedule Employee setting creates a continuous bid aution. These auctions are available for two auction types: Combination of Individual Shifts and Multiple Shifts per Day.

1.02	Updated the following topics with more information about the different auction shift bid types: • Submit one shift bid request at a time for an employee • Submit multiple shift bid requests for an employee • Auction shift bid types
1.01	Updates for V15.2 HFR4: • The *Setting up shift requests and changes* chapter was updated with content for the following feature: Employees can request to withdraw an approved shift request & change. Content includes validation rules, filing rules, and autoprocessing rules. • The *Setting up shift bidding requests* chapter was updated with content for the following feature: Administrators can create shift bid auctions for the current schedule period for two shift bid auction types: Combination of Individual Shifts option and Multiple Shifts per Day option. Content updates include changes on the Schedule Auction Settings page and the Bid Options page.
1.00	Initial publication.

Chapter 1

Introduction to Request Management

Request Management provides many options for automating the employee request process and managing employee requests.

With Request Management, you can set up and manage the following:

- Time-off requests
- Flex time requests
- Shift swap requests
- Shift bid requests
- Shift requests and changes
- Time-off bids for vacation
- Shift bid auctions

Topics

Request Management overview 21

Request Management overview

As part of the Workforce Management (WFM) solution, Request Management provides a way to manage employee requests that provides benefits to both management and employees.

- Management productivity can increase by automating many routine administrative tasks and providing employees with self-service capability for requests. Managers and supervisors can spend extra time focusing on more critical areas such as coaching and performance-related tasks.
- Employees can feel more empowered and have greater job satisfaction because they participate in the workforce management process from their desktops. For example, they can access their schedule information, view the time-off calendar, submit their requests, view request status, and conflict information if any.

Time off

Employees can view time off availability, submit, withdraw, and track requests for time-off days and partial days, and receive conflict and request status information. They can request time off down to 15-minute increments. If employee requests cannot be approved due to insufficient hours in the time-off allotment, requests can be put on a waitlist.

After a time-off event is approved, an employee can opt to withdraw this request. If approved, the hours used from the time-off allocation are replaced and made available to other employees. The system checks for requests on the time-off wait list.

Flex time

Flex time requests allow employees to request time-off with associated make-up time instead of having time deducted from their time-off accrual.

Employees can do the following:

- Submit a request for time-off before the makeup time. For example, an employee can request to make up for a late arrival by adding an extension to the end of the shift instead of being marked late.
- Submit a request for makeup time before the time-off. For example, an employee can request to work extra time in advance to avoid taking time-off for an upcoming appointment.

Shift swap

Shift swapping efficiently enhances the flexibility of schedules without sacrificing service levels or quality.

Employees can swap either a shift or nonwork time using the following options:

- Post a shift swap on the online swap board. The posting is listed for others to view and, when interested, accept the posting to negotiate the swap.
- Send a swap request to a specific employee.

After a shift swap is approved, an employee can withdraw their request if needed.

Confidential and Proprietary Information of Verint Systems Inc.

Shift requests and changes

Shift requests and changes allow employees to submit requests for new shifts, to work overtime, and to extend or shorten an existing shift.

In addition, depending on how you configure the Workforce Management system, the requests can be approved or rejected automatically based on net staffing requirements you define to ensure shift coverage.

Shift bidding

Employees can identify and submit bids for the shifts that they want during an online auction. A set of rules can be set up to process the bids. Assignment of shifts is based on seniority, performance or rank, and unique discretionary points awarded by managers to employees. These points reward employees for hard work and superior performance.

Schedulers can start the auction by naming the shift period available for bidding, setting a deadline for the bids, and defining the scoring system. You can add all employees to the bid at the same time or one at a time according to a specified order such as seniority or rank.

Employees can view the available schedules and see their bid positions. They can filter shifts available for bidding using multiple criteria, and then sort and subsort on multiple columns to narrow down their search for shifts they want to bid on. Then, they rank their shift bids. Employee can use their bonus points to give them a greater chance of getting desired shifts. They can also add comments to their bids at the same time. After they submit their bids, the application automatically sorts them by seniority, rank, bonus points, performance rankings, and shift preferences.

Supervisors can view employee comments and then approve the bids, either all at once or individually. Then, with a click, they can fill the schedule and send it to the employees' desktops.

Time-off bidding for vacation

Time-off bidding automates the vacation bidding process which is typically held for the next calendar year.

When administrators create a time-off bid, they set the period that employees can submit bids, period that employees can request time-off for vacation, minimum and maximum period that can be included in a time-off choice, and the maximum period that can be approved. The time-off approval limit can be set to one amount for all employees or to different amounts for employees.

During the bid period, employees submit time-off requests with their vacation choices for the bid request period.

Management can use a filter can be used to view only requests from a specific bid. Time-off bids can be processed individually or as a group. Multiple choices from a request can be approved with the group processing options.

Employees can be given the option to copy unapproved choices in a time-off request to a new time-off bid.

Chapter 2

Defining shared request settings

Shared request settings are optional settings that are effective for all request types. Use these settings to define Employee Workflow Option, track Minimum Hours per Pay Period, and change how auto breaking rules manage unpaid breaks for time off requests.

Topics

Define settings shared by all request types 24

Define settings shared by all request types

While most Request Management settings are specific to one type of request, several optional settings are effective for all request types.

- **Employee Workflow Options settings**: Determine whether employees can escalate denied requests, view auto-processing rules, and view schedules of specific organizations.
- **Required Pay Period Hours settings**: If you want to track minimum hours per pay period for employees, these settings must be completed as part of the feature setup.
- **Auto Breaking settings**: This setting only applies to time off requests, and is selected by default. It ensures that after a time off request is approved, the employee's paid time does not exceed the paid time prior to the request.

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Settings**.
2. From the **Organization Name** pane, click an organization.
3. Optional: Define the following settings:
   - Employee Workflow Options settings
   - Required Pay Period Hours settings
4. Optional: Change the following setting:
   - Auto Breaking
5. To save these settings, do one of the following:
   - Click **Save and apply to sub-orgs**.
   - Click **Save**.

Related topics

Shared request settings (page 24)

Shared request settings

Shared request settings are optional settings that are effective for all request types.

Employee Workflow Options

Setting	Description
Allowed escalation of denied requests	Determines whether employees can escalate a denied request for further consideration. If selected, employees have an action button available next to the denied request. This button sends the request to a manager who has privileges to decide on the disposition of escalated requests.

Confidential and Proprietary Information of Verint Systems Inc.

Setting	Description
Show auto processing rules to employees.	If selected, employees can see the autoprocessing rules set for their organization on the **Policies** page. This page is located on My Home, under My Requests.
Limit employees' schedule viewing to the following organizations	This settings affects employees who have the privilege to view group schedules. Determines whether employees in the selected organization are limited to viewing the schedules of specific organizations on My Group page (located on My Home under My Schedule). • When the organization list is blank, employees can view schedules for all organizations. • When organizations are selected for the list, employees can only view schedules for these specific organizations.

Required Pay Period Hours

Setting	Description
Track Required Pay Period Hours by	If this check box is selected, the required minimum hours per pay period are tracked.
Pay Period	Identifies the pay period frequency. Match the frequency in your payroll system.
Start Date	Identifies the date that the pay period starts. This start date must be a date that going forward synchronizes to the pay period date range in your payroll system.

Start Date is 01/01/2017

When the Pay Period is...	Then the next pay period starts on...
weekly	01/08/2017
bi-weekly	01/15/2017
monthly	02/01/2017

Start Date is 02/17/2017

When the Pay Period is...	Then the next pay period starts on...
weekly	02/24/2017
bi-weekly	03/03/2017
monthly	03/17/2017

Additional setup requirements before Minimum Pay Period Hours can be tracked:

Confidential and Proprietary Information of Verint Systems Inc.

- The Required Pay Period Hours value must be defined for users in the organization on the **Work Rules** page. This page is located on **User Management**, under **Employees**.
- For time-off activities, one or more absence activities must be set up to apply to the Required Pay Hours balance. Activities are set up on the **Activities** page. This page is located on **Work Administration**, under **Activities**.
- The Request Complies with Required Pay Period Hours validation rule must be set. This rule is available for three types of requests: time-off requests, shift swap requests, and shift request and changes.

Shift Optimization Settings

Setting	Description
Move unpaid breaks under time off for shift length optimization.	Shift optimization rules for time off requests use this setting. It ensures that after a time off request is approved, the employee's paid time does not exceed the paid time before the request.

Request Approval

Setting	Description
When approving work requests:	This setting affects what is published when approving the following *work* requests: • Shift Request and Change (new shift, shift extensions, shift time and type) • Shift Bidding (all auction types) • Flex Time (makeup segments) This setting does not affect the following request types: • Shift swap: Publishes the entire day by default. • Time off: When these requests are approved, only the time off activity is published. Options are: • **Publish requested time range** (default): When the request is approved, only the requested time range is published. • **Publish entire day**: When the request is approved, the entire day or days in the request are published based on the employee's organization hours of operation. This option is recommended when you are using interval allocations in a time off pool and multiple shifts per day auctions. It ensures that time off hours and working hours span the entire day.

Chapter 3

Setting up time-off requests

With time-off requests, employees can request various types of time-off such as paid time-off, voluntary or unpaid time-off, and sick time.

For submitted requests, you can do the following:

- Approve and deny time-off requests
- Approve and deny withdrawal of approved time-off requests
- Approve and deny waitlisted time-off requests
- Withdraw approved time-off request on the behalf of employees
- Waitlist denied time-off requests on the behalf of employees

Recommended workflow: Set up time-off requests

Set up time-off requests to manage various types of time-off such as paid time-off, voluntary time-off, and sick time.

This workflow describes the procedures for setting up time-off requests and using all system features. Follow the procedures that fit the needs of your organization.

Workflow

1. Define settings shared by all request types (page 24)

   While most Request Management settings are specific to one type of request, several optional settings are effective for all request types.

2. Turn on time off waitlists (page 31)

   Waitlisting is an optional, system-wide feature for time off requests. The waitlisting auto processing rule that you create during setup determines if a request is automatically put on the waitlist. If hours are added to the time off pool later, the waitlisted requests are processed and may be approved. Hours are added to a pool when various events occur such as withdrawal of requests or deletion of a Special Day of Time Off Not Allowed.

3. Define settings for time-off requests (page 33)

   Time-off settings determine the workflow for both managers and employees, time-off request options, time-off accrual, and time-off calendar colors.

4. Create policies for time-off requests (page 37)

   Time-off request policies provide guidance to employees about submitting requests. Employees can view all request policies on the Policies page (on the My Request menu.)

5. Define validation rules for time-off requests (page 38)

   Validation rules verify that requests meet the conditions that you specify. Rules can be defined for both time-off requests and approved time-off withdrawal requests. The validation rules that you set for a request type are available as criteria for auto-processing rules.

6. Create filing rules.
   - Create a filing rule for time-off requests (page 58)

     You can create a filing rule to specify when time-off request must be submitted. When time-off requests are submitted, a validation rule verifies that the requests comply with the filing rule for the time-off type in the request.

   - Create a filing rule for approved time-off withdrawal requests (page 66)

     You can create a filing rule to specify when approved time-off withdrawal requests must be submitted. When these requests are submitted, a validation rule verifies that these requests comply with the filing rule.

7. Create autoprocessing rules.
   - Create an autoprocessing rule for time-off requests (page 68)

     Instead of processing time-off requests manually, you can save time by creating an autoprocessing rule. The system uses this rule to approve, waitlist, and deny requests that violate time-off request validation rules.

   - Create an autoprocessing rule for approved time-off withdrawal requests (page 75)

Confidential and Proprietary Information of Verint Systems Inc.

While approved time-off withdrawal requests can be processed manually, you can set up a rule for the system to process them automatically. An autoprocessing rule can be used to approve and deny requests based on the validation rules that you set.

8. Create a special day (page 78)

   Special days are added to an organization's time off calendar to identify days where time off is not allowed, non-working holidays, and working holidays. Viewing special days on the calendar helps employees plan their time off requests and helps you manage these requests.

9. Create a time-off pool (page 86)

   Create a time-off pool to define how much time can be taken off for a specific time period. A time-off pool can have time-off allocations for each day, segments of each day, or both.

10. Assign employees to a time-off pool and allocate time-off hours (page 99)

    Assign a time-off pool and allocate time-off hours to any employee in an organization with time-off types (activities) that are set up to deduct from a time-off pool.

Related topics

Set up time off waitlists (page 32)

Confidential and Proprietary Information of Verint Systems Inc.

Turn on time off waitlists

Waitlisting is an optional, system-wide feature for time off requests. The waitlisting auto processing rule that you create during setup determines if a request is automatically put on the waitlist. If hours are added to the time off pool later, the waitlisted requests are processed and may be approved. Hours are added to a pool when various events occur such as withdrawal of requests or deletion of a Special Day of Time Off Not Allowed.

A request is automatically put on the waitlist when it meets both of the following conditions:

- The request was submitted with the optional **Waitlist if applicable** check box selected.
- The request would be approved if the requested hours were available in the time off pool. That is, the request must pass all required validation rules except for the following rules:
  - Time Off Pools has available time off hours (when selected during setup)
  - Request avoids days where time off is not allowed. (when selected during setup)

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Settings**.
2. From the left pane, select the company. When a suborganization is selected, the setting is not available.
3. Under **Global Level Settings**, select **Enable time off waitlists**. If you selected a suborganization, the setting is not available.
4. Click **Save**.

Set up time off waitlists

A waitlist is an optional feature for time off requests, and must be set up for each organization.

Whether you set up waitlists as part of the initial set up of time off requests or do it later, use this procedure to know what you need to do in settings, validation rules, auto processing rules, and time off pools.

Before you begin

Turn on time off waitlists (page 31)

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Settings**.
2. From the left pane, select an organization.
3. Optional: When defining Time Off settings, under **Time Off Request Options**, select the option **Include waitlist in time off pool validation**.
4. When defining Time Off validation rules, select one or both of the following rules:
   - Time Off Pools has available time off hours
   - Request avoids days where time off is not allowed.
5. When creating Auto Processing rules, create a rule for waitlisting.
6. When creating time off pools, do the following:
   a. Select **Enable waitlists**.
   b. Optional: Select **Enable autoscan of waitlisted requests**.
   c. Optional: Under **Waitlist sort priorities**, change the default and add more sort priorities.
7. If needed, repeat this procedure for other organizations.

Define settings for time-off requests

Time-off settings determine the workflow for both managers and employees, time-off request options, time-off accrual, and time-off calendar colors.

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Settings**.
2. From the **Organization Name** pane, click an organization.
3. Define the Time Off organization settings:
   - Time Off Management Activation
   - Time Off Request Options
   - Time Off Accrual
   - Time Off Calendar Colors
4. To save these settings, do one of the following:
   - Click **Save and apply to sub-orgs**.
   - Click **Save**.

Related topics

Time-off request settings (page 33)

Time-off request settings

Time-off settings define options and set requirements in time-off requests submitted by employees in an organization.

Location

Go to **Organization Management**. Under **Request Management**, select **Settings** page.

Time Off Management Activation

Setting	Description
Activate Manager Workflow	Determines whether *managers* in the selected organization can view and act on time off requests from their employees. It also enables managers to access the Time Off Calendar.
Activate Employee Workflow	Determines whether *employees* in the selected organization can view, create, and edit time off requests. It also enables employees to access the Time Off Calendar.

Confidential and Proprietary Information of Verint Systems Inc.

Time Off Request Options

Setting	Description
Time Off Hours Request Options	Determines the time off request options available to employees on the request form. Options are: • **Use my time-off hours to schedule my absence**: Allocated time off hours are required to schedule an absence. • **Schedule around my time off requests if possible**: Instead of using allocated time off hours, the scheduler run tries to build a schedule around the employee's request. • **Both**: Both options are available.
Time Off Rounding Options	Specifies a rounding option for time-off requests. When a request is saved, the time is rounded up or down, depending on what time is closest to the selected rounding option. Options: • **Round to the nearest 1-minute interval**: Rounds to the nearest minute of a submitted employee request. Example: If an employee submits a request for 9:01 AM and 55 seconds to 11:52 AM and 3 seconds, the request is rounded to 9:02 AM to 11:52 AM. • **Round to the nearest 15-minute interval** (default): Rounds to the nearest 15-minute interval of a submitted employee request. Example: If an employee submits a request for 12:53 PM to 4:27 PM, the request is rounded to 1:00 PM to 4:30 PM. • **Round to the nearest 1-hour interval**: Rounds to the nearest 1-hour interval of a submitted employee request. Example: If an employee submits a request for 5:55 PM to 9:10 PM, the request is rounded to 6:00 PM to 9:00 PM. • **Round to the nearest 1-day interval**: Rounds to the nearest 1-day interval of a submitted employee request. Example: If an employee submits a request for 9 AM, it is rounded to 12 AM of the *same* day. If an employee submits a request for 2 PM, it is rounded to 12 AM of the *next* day.
Maximum Allowed Time Off Choice(s) Per Request	Specifies the maximum number of time-off choices that can be made per time-off request.

Confidential and Proprietary Information of Verint Systems Inc.

Setting	Description
Allow Time Off Bid request to be copied	If selected, employees can pre-populate choices in a new time-off bid request with choices that were not approved in a previous time-off bid. Comment History is not pre-populated. On My Request page, a copy icon is displayed in the Actions column for a request when it meets all of the following conditions: • Is from a closed bid. • Has the status of pending or closed. • Has choices that can be approved. This feature is not available on the Employee Request page.
Use hours of operation for Time Off Requests	If selected, the **From time** and **To time** in the **Select Date Range** box defaults to the organization's hours of operation (instead of 12:00 AM and 11:59 PM).
Add to Waitlist option selected by default for Time off Requests	When selected, the Time Off request form option **Add to Waitlist if not Approvable** is selected by default.
Include waitlist in time off pool validation	This setting works with the *Time Off Pool has available time off hours* validation rule. With this option, this rule does another validation when the employee has selected the Waitlist if applicable check box in the request. In addition to validating that there are available hours in the time off pool, the rule checks for existing waitlisted requests for the same date range. When these waitlisted requests exist, the new request is added to the waitlist in the existing sort order. When more hours are added to the time off pool, the waitlisted requests are approved based on the sort order.

Time Off Accrual

Setting	Description
Time Off Year	Determines the boundary of the year for time-off requests: • **Employee Anniversary date**: Boundary of the year for time-off requests is determined by the start date of the employee at the company. This anniversary date is used as the accrual schedule for all activities that accrue on a yearly schedule. • **Fixed date**: Boundary of the year for time-off requests is determined by this specific date. This date is used as the accrual schedule for all activities that accrue on a yearly schedule.

Confidential and Proprietary Information of Verint Systems Inc.

Setting	Description
Accrual Day of Month	Day of the month used as the accrual schedule for all activities that accrue on a monthly schedule.
Accrual Day of Week	Day of the week used as the accrual schedule for all activities that accrue on a weekly schedule.
Monthly Accrual Day	Day of the month used as the accrual schedule for all activities that accrue on a monthly schedule.
Weekly Accrual Day of Week	Day of the week used as the accrual schedule for all activities that accrue on a weekly schedule.
Biweekly Accrual Start Date	Start date used as the accrual schedule for all activities that accrue on a biweekly schedule.

Time Off Calendar Colors

The time-off calendar uses different colors to identify types of days and whether time off hours are available. You can change any of the default colors.

Example: By default, red is the color for Time Off Not Allowed days.

Define validation rules for time-off requests

Validation rules verify that requests meet the conditions that you specify. Rules can be defined for both time-off requests and approved time-off withdrawal requests. The validation rules that you set for a request type are available as criteria for auto-processing rules.

Each validation rule has an icon. When a request violates a validation rule, alert information is available on the following:

- Employee Requests page: An alert icon is displayed. When you point to the icon, information about the validation rule violation is displayed.
- The request details: The alert icon and information about the validation rule violation are on the details view.

Rules for time-off type

By default, time-off request validation rules are set for all time-off types (activities). When you define these rules, you can choose a different set of rules for each time-off type.

An (*) asterisk displays on the left of a rule check box when a rule applies to some, but not all, activities in an organization.

Example: All time-off activities have validation rule 1 set. Activity B has rule 1 and rule 2 set. An asterisk is displayed next to rule 2.

No changes are made to the time-off type activities associated with these rules when you save. If you want to make these rules apply to all activity types, modify the Time Off Validation rule settings to remove the asterisk from them.

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Validation**.
2. In the left pane, select an organization.
3. Optional: To apply validation rules to an activity type, do the following:
   a. Under the **Time Off Request Validation rules** section, in the **Time-off type** list, click an activity.
   b. To add more time-off types, press Ctrl and click another activity type.
4. To define the validation rules that you want to use.
   a. Select the check box.
   b. When needed, complete the rule values (Example: number of minutes, hours, or days).
5. Under the **Approved Time Off Withdrawal Validation rules** section, select the check box.
6. To save, do one of the following:
   - Click **Save**.
   - Click **Save and Apply to Sub-Orgs**.

Related topics

Validation rules page (page 43)
VTO options request validation rules (page 57)

Time-off request validation rules

Use any of these validation rules to set conditions that you want validated in time-off requests. You can specify rules for a specific activity.

Time off type list

This list lets you select validation rules for all activity types or a specific activity type. The default is **All**.

The list includes all activities created for the organization with the **Used in Requests** option. This option is set on the **Activities** page. This page is located on **Work Administration**, under **Activities**.

Validation rules

- **Time Off Pool has available time off hours.** This rule is violated if the total length of scheduled time-off events for all employees during the requested day(s) is greater than the number of hours entered in either the Daily Pool or the Interval Pool or both time-off pools depending on the setup of the Time Off Activity selected for the request.

  Hours for the Daily Pool and the Interval Pool are entered on the **Time Off Pools** page. This page is located on **Organization Management**, under **Request Management**.

- **Request avoids days where time off is not allowed.** This rule is violated if the request covers a day where time off is *not* allowed.

  Days where time off is *not* allowed are set up on the **Special Days** page. (This page is located in **Organization Management** under **Request Management**.)

- **Employee's time off balance has reached a value lower than the minimum allowed balance of <zero (0.00) or negative (-) n> hours.** If this validation rule is set to zero, the rule is violated if the total length of scheduled time-off events for this employee during the schedule of accrual *is a negative value*. (Employees can accrue time off hours on different schedules, such as daily, weekly, biweekly, monthly.)

  If this validation rule is set to a negative value, the rule is violated if the total length of scheduled time-off events for this employee during the schedule of accrual is lower *than the defined negative value*.

  For example, this validation is set to **Employee's time off balance has reached a value lower than the minimum allowed balance of negative (-) 8 hours.** The total length of scheduled time-off events for an employee is -12 hours. In this case, an error message is displayed that this validation has been violated.

  The allotment is entered on the **Time Off** page. This page is located on **User Management**, under **Employees**. Time Off year may be either the employee anniversary year or a calendar year, as configured on the page.

  This validation rule takes into account the number of hours accrued by an employee as of the request target date.

Confidential and Proprietary Information of Verint Systems Inc.

- **Request complies with filing rules.** This rule is violated if the request submittal date violates any of the filing rules applicable to the employee's organization.
- **Requested time off is not being swapped.** This rule is violated if one or more request choices overlaps a shift that will be received from a pending shift swap request (state of shift swap request is either pending, in negotiation or escalated).
- **Scheduled calendar event activities that the request avoids**: <**All** or a specific calendar event>**.** This rule is violated if the requested time off period overlaps with the selected scheduled calendar event.
- **Minimum duration of the request:** <*number*> <**Minutes, Hours,** or **Days.**> This rule is violated if the request duration (end date - start date) is not at least the specified minimum. The minimum can be expressed in units of **Minutes**, **Hours**, or **Days**.
- **Maximum duration of the request:** <*number*> <**Minutes, Hours**, or **Days.**> This rule is violated if the request duration (end date - start date) exceeds the specified maximum. The maximum can be expressed in units of **Minutes**, **Hours**, or **Days.**
- **Requested time off is for a past date.** This rule is violated any time a request is created for a start date earlier than the creation date of the request.
- **A minimum of**<*x*> **percent of changed intervals improves net staffing based on all queues that the employee is** <eligible to work or assigned to work> **for the request duration**. This rule is violated when the percentage of queue time intervals that will be changed by the request is less than the specified minimum percentage for net staffing improvement in the work queues.

  The minimum staffing level percentage is calculated as follows:

  Improvement Percentage = (#periods where net staffing is improved / (#periods where net staffing is improved + #periods where net staffing is worsened))*100

Examples

Example 1

Employee information:

Alice has skills to work both Queue-A and Queue-B. Both queues are overstaffed on Friday between 8:00 AM and 12:00 PM. Alice is only working Queue-A during this time. She requests Voluntary Time Off for this time range.

Time off validation rule setting for Voluntary Time Off:

A minimum of [*100*] percent of changed intervals improves net staffing based on all queues that the employee is [*eligible to work*] {for the request duration.

Result:

Alice's request receives the following validation alert:

Time Off Request violates the net staffing requirements

Explanation:

The validation rule states all of the queues that the employee is eligible to work must be compared against the request. Because Alice is working only Queue-A, Queue-A improves.

Confidential and Proprietary Information of Verint Systems Inc.

Queue-B gets no better, no worse; so the denominator of the fraction interval made better/interval changed is zero. Therefore, the percent improved cannot be calculated.

Example 2

Employee information: (This is the same employee as in Example 1.)

Alice has skills to work both Queue-A and Queue-B. Both queues are overstaffed on Friday between 8:00 AM and 12:00 PM. Alice is only working Queue-A during this time. She requests Voluntary Time Off for this time range.

Time off validation rule setting for Voluntary Time Off:

A minimum of [*100*] percent of changed intervals improves net staffing based on all queues that the employee is [*assigned to work*] for the request duration.

Result:

Alice's request does not receive an alert.

Explanation:

Because Alice's request is compared only to Queue-A and 100 percentage of the intervals that are changing improve, the request passes the validation.

Example 3

Employee information:

Barry has skills to work both Queue-A and Queue-B. Both queues are overstaffed on Friday between 8:00 AM and 12:00 PM. Barry is working a blended shift that applies to both queues during this time. He requests Voluntary Time Off for this time range.

Time off validation rule setting for Voluntary Time Off:

A minimum of [*100*] percent of changed intervals improves net staffing based on all queues that the employee is [*eligible to work*] for the request duration.

Result:

Barry's request does not receive an alert.

Explanation:

Because Barry’s request will improve both queues, the validation passes.

- **Request complies with employee’s maximum VTO per day/week.** This rule is violated if approval of the request results in the employee exceeding his maximum VTO hours per day / week.
- **Request complies with Required Pay Period Hours.** This rule is violated if the request would cause the employee to not meet the minimum hours in a pay period (includes Flex Time Requests).

  Tracking for the Required Pay Period Hours entered on the **Settings** page. This page is located on **Organization Management**, under **Request Management**. When this setting is selected for an employee's organization, the Required Hours (balance) for Pay Period section is available on the following pages:

  - **Time Summary**: This page is located on **Tracking**, under **Roster**.
  - **My Schedule Summary**: This page is located on **My Home**, under **My Schedule**.

  One or more time off activities must be set up to deduct from the Required Pay Period Balance. (This is done on the Activities page. It is located on **Administration**, under **Work Administration**, **Request Management Usage** section.)

Confidential and Proprietary Information of Verint Systems Inc.

- **Time Off Bid: Enforce the maximum approvals per employee for Time Off Bids.** This rule is violated if the request exceeds the maximum time that can be approved for that employee and bid. The maximum time can be hours or days.

  The maximum time for all employees in an organization and its suborganizations that are in the bid is set on the **Settings** page. This page is located on **Request Management**, under **Time Off Bidding**. The maximum time for individual employees that are in the bid is set on the **Employees** page. This page is located on **Request Management**, under **Time Off Bidding**.
- **Time Off Bid: Requests submitted before Time Off Bid deadline.** This rule is violated if the request is submitted after the Time Off Bid deadline.
- **Time Off Bid: Request does not overlap with approved Requests.** This rule is violated if the request overlaps one or more approved time-off requests. This rule prevents automatic approval of multiple continuous requests in the Time Off Bid process.
- **Request complies with maximum** <*number*> **approved time off requests per quarter.** This rule is violated if the request for the selected time off type exceeds the specified number of approved time off request in any quarter. The four quarters are:
  - January, February, and March (Q1)
  - April, May, and June (Q2)
  - July, August, and September (Q3)
  - October, November, and December (Q4)
- **Request does not overlap with approved time-off requests**. This rule is violated if the request submitted by the employee overlaps a portion of an already approved request submitted by the employee.

Validation rules page

Validation rules verify that requests meet the conditions that you specify. The validations rules that you use are available as approval and denial criteria for autoprocessing rules. A subset of these rules are available as waitlist criteria for time-off requests.

Each validation rule has an icon. If a request violates a validation rule, the icon is displayed for both the requesting employee (My Request page) and the employees that manage these requests (Employees Request page).

Time Off Request Validation rules section

Time off type list

This list lets you select validation rules for all activity types or a specific activity type. The default is **All**.

The list includes all activities created for the organization with the **Used in Requests** option. This option is set on the **Activities** page. This page is located on **Work Administration**, under **Activities**.

Validation rules

- **Time Off Pool has available time off hours.** This rule is violated if the total length of scheduled time-off events for all employees during the requested day(s) is greater than the number of hours entered in either the Daily Pool or the Interval Pool or both time-off pools depending on the setup of the Time Off Activity selected for the request.

  Hours for the Daily Pool and the Interval Pool are entered on the **Time Off Pools** page. This page is located on **Organization Management**, under **Request Management**.

- **Request avoids days where time off is not allowed.** This rule is violated if the request covers a day where time off is *not* allowed.

  Days where time off is *not* allowed are set up on the **Special Days** page. (This page is located in **Organization Management** under **Request Management**.)

- **Employee's time off balance has reached a value lower than the minimum allowed balance of <zero (0.00) or negative (-) n> hours.** If this validation rule is set to zero, the rule is violated if the total length of scheduled time-off events for this employee during the schedule of accrual *is a negative value*. (Employees can accrue time off hours on different schedules, such as daily, weekly, biweekly, monthly.)

  If this validation rule is set to a negative value, the rule is violated if the total length of scheduled time-off events for this employee during the schedule of accrual is lower *than the defined negative value*.

  For example, this validation is set to **Employee's time off balance has reached a value lower than the minimum allowed balance of negative (-) 8 hours.** The total length of scheduled time-off events for an employee is -12 hours. In this case, an error message is displayed that this validation has been violated.

Confidential and Proprietary Information of Verint Systems Inc.

The allotment is entered on the **Time Off** page. This page is located on **User Management**, under **Employees**. Time Off year may be either the employee anniversary year or a calendar year, as configured on the page.

This validation rule takes into account the number of hours accrued by an employee as of the request target date.

- **Request complies with filing rules.** This rule is violated if the request submittal date violates any of the filing rules applicable to the employee's organization.
- **Requested time off is not being swapped.** This rule is violated if one or more request choices overlaps a shift that will be received from a pending shift swap request (state of shift swap request is either pending, in negotiation or escalated).
- **Scheduled calendar event activities that the request avoids**: <**All** or a specific calendar event>**.** This rule is violated if the requested time off period overlaps with the selected scheduled calendar event.
- **Minimum duration of the request:** <*number*> <**Minutes, Hours,** or **Days.**> This rule is violated if the request duration (end date - start date) is not at least the specified minimum. The minimum can be expressed in units of **Minutes**, **Hours**, or **Days**.
- **Maximum duration of the request:** <*number*> <**Minutes, Hours**, or **Days.**> This rule is violated if the request duration (end date - start date) exceeds the specified maximum. The maximum can be expressed in units of **Minutes**, **Hours**, or **Days.**
- **Requested time off is for a past date.** This rule is violated any time a request is created for a start date earlier than the creation date of the request.
- **A minimum of**<*x*> **percent of changed intervals improves net staffing based on all queues that the employee is** <eligible to work or assigned to work> **for the request duration**. This rule is violated when the percentage of queue time intervals that will be changed by the request is less than the specified minimum percentage for net staffing improvement in the work queues.

  The minimum staffing level percentage is calculated as follows:

  Improvement Percentage = (#periods where net staffing is improved / (#periods where net staffing is improved + #periods where net staffing is worsened))*100

Examples

Example 1

Employee information:

Alice has skills to work both Queue-A and Queue-B. Both queues are overstaffed on Friday between 8:00 AM and 12:00 PM. Alice is only working Queue-A during this time. She requests Voluntary Time Off for this time range.

Time off validation rule setting for Voluntary Time Off:

A minimum of [*100*] percent of changed intervals improves net staffing based on all queues that the employee is [*eligible to work*] {for the request duration.

Result:

Alice's request receives the following validation alert:

Confidential and Proprietary Information of Verint Systems Inc.

Time Off Request violates the net staffing requirements

Explanation:

The validation rule states all of the queues that the employee is eligible to work must be compared against the request. Because Alice is working only Queue-A, Queue-A improves. Queue-B gets no better, no worse; so the denominator of the fraction interval made better/interval changed is zero. Therefore, the percent improved cannot be calculated.

Example 2

Employee information: (This is the same employee as in Example 1.)

Alice has skills to work both Queue-A and Queue-B. Both queues are overstaffed on Friday between 8:00 AM and 12:00 PM. Alice is only working Queue-A during this time. She requests Voluntary Time Off for this time range.

Time off validation rule setting for Voluntary Time Off:

A minimum of [*100*] percent of changed intervals improves net staffing based on all queues that the employee is [*assigned to work*] for the request duration.

Result:

Alice's request does not receive an alert.

Explanation:

Because Alice's request is compared only to Queue-A and 100 percentage of the intervals that are changing improve, the request passes the validation.

Example 3

Employee information:

Barry has skills to work both Queue-A and Queue-B. Both queues are overstaffed on Friday between 8:00 AM and 12:00 PM. Barry is working a blended shift that applies to both queues during this time. He requests Voluntary Time Off for this time range.

Time off validation rule setting for Voluntary Time Off:

A minimum of [*100*] percent of changed intervals improves net staffing based on all queues that the employee is [*eligible to work*] for the request duration.

Result:

Barry's request does not receive an alert.

Explanation:

Because Barry’s request will improve both queues, the validation passes.

- **Request complies with employee’s maximum VTO per day/week.** This rule is violated if approval of the request results in the employee exceeding his maximum VTO hours per day / week.
- **Request complies with Required Pay Period Hours.** This rule is violated if the request would cause the employee to not meet the minimum hours in a pay period (includes Flex Time Requests).

  Tracking for the Required Pay Period Hours entered on the **Settings** page. This page is located on **Organization Management**, under **Request Management**. When this setting is selected for an employee's organization, the Required Hours (balance) for Pay Period section is available on the following pages:

Confidential and Proprietary Information of Verint Systems Inc.

- **Time Summary**: This page is located on **Tracking**, under **Roster**.
- **My Schedule Summary**: This page is located on **My Home**, under **My Schedule**.

One or more time off activities must be set up to deduct from the Required Pay Period Balance. (This is done on the Activities page. It is located on **Administration**, under **Work Administration**, **Request Management Usage** section.)

- **Time Off Bid: Enforce the maximum approvals per employee for Time Off Bids.** This rule is violated if the request exceeds the maximum time that can be approved for that employee and bid. The maximum time can be hours or days.

  The maximum time for all employees in an organization and its suborganizations that are in the bid is set on the **Settings** page. This page is located on **Request Management**, under **Time Off Bidding**. The maximum time for individual employees that are in the bid is set on the **Employees** page. This page is located on **Request Management**, under **Time Off Bidding**.
- **Time Off Bid: Requests submitted before Time Off Bid deadline.** This rule is violated if the request is submitted after the Time Off Bid deadline.
- **Time Off Bid: Request does not overlap with approved Requests.** This rule is violated if the request overlaps one or more approved time-off requests. This rule prevents automatic approval of multiple continuous requests in the Time Off Bid process.
- **Request complies with maximum** <*number*> **approved time off requests per quarter.** This rule is violated if the request for the selected time off type exceeds the specified number of approved time off request in any quarter. The four quarters are:
  - January, February, and March (Q1)
  - April, May, and June (Q2)
  - July, August, and September (Q3)
  - October, November, and December (Q4)
- **Request does not overlap with approved time-off requests**. This rule is violated if the request submitted by the employee overlaps a portion of an already approved request submitted by the employee.

Approved Time Off Withdrawal Validation rules section

- **Request complies with filing rules.** This rule is violated if the withdrawal request submission date violates any of the filing rules applicable to the employee's organization.

Flex Time Request Validation rules section

- **Maximum duration of Flex Time Request:** <*number*> <**Minutes** or **Hours**>**.** This rule is violated if the flex time-off duration, and any consecutive requests enabled for Flex Time, is equal to a value that is greater than the specified maximum duration.
- **Minimum duration of Flex Time Request:** <*number*> <**Minutes** or **Hours**>**.** This rule is violated if the total flex time duration is less than the specified minimum.

Confidential and Proprietary Information of Verint Systems Inc.

- **Maximum number of makeup blocks per request:** <*number*>**.** This rule is violated if the total number of flex time makeup blocks is greater than the specified maximum.
- **Maximum number of Flex Time Requests:** <*number*> <**Month** or **Quarter**>**.** This rule is violated if the total flex time requests are greater than the specified maximum. When this rule is selected for an employee's organization, the Flex Time Summary section is available on the following pages:
  - **Time Summary**: This page is located on **Tracking**, under **Time Summary**.
  - **My Schedule Summary**: This page is located on **My Home**, under **My Schedule**.
- **Minimum duration of the activity** < *adjustable break activity or shift gap activity*> **is** <*number*> <**Minutes** or **Hours**> **after a make-up extension during the activity**. This rule is violated if the minimum duration of the selected activity will not be met after an extension during the activity. (Until shift event activities are created for adjustable breaks or shift gaps, the list of activities is empty.) Example - adjustable break activity: Employees get a 60 minute, unpaid lunch break for a shift that exceeds six hours. By law, they are required to take 30 minutes for lunch. You can define this rule with a minimum activity duration of 30 minutes to prevent employees from making their lunch break too short.

  Two break segments can occur due to a gap--one segment before and one segment after the work extension. Only one of these break segments must meet the minimum duration requirement in this rule.

  If you are defining this rule for multiple activities with the same duration, you can select all applicable activities and enter the duration once. If you are defining this rule for activities with different durations, define each activity separately. Also, you can save or cancel all activities at one time instead of processing them individually. By default, the first adjustable break activity or shift gap activity shows in the list box.

  To remove a minimum duration for an activity, set the duration to *blank* and save the change.
- **Makeup must occur** <time period option>. This rule is violated when the requested make-up time does not occur in the selected time period. Time period options are:
  - **as soon as possible and no later than a specific number of days** <number of days> Make-up time must be made up in the next gap, shift start, or shift end--whichever one comes first.

    Employees can use an adjustable break to make up time, but it is not included in this validation.

    Examples:
    - If an employee requests time off at the beginning of a shift and the shift has a gap, then all or part of the make-up time must occur during the gap.
    - If an employee requests time off at the end of a shift, then the make-up time must occur before the next shift.
  - **in the same organization week**
    Make-up time must start and end within the same organization week as the time off.

    The organization week is based on **Week Start Day** defined on the Organization Settings page (under Hierarchies Organization Management, then Hierarchies).

Confidential and Proprietary Information of Verint Systems Inc.

- **in the same scheduling period**
  Make-up time must start and end within the same scheduling period as the time off.

  The scheduling period is based on the scheduling periods listed on the Campaigns Settings page (under Forecasting and Scheduling then Campaigns).
- **in the same pay period**
  Make-up time must start and end within the same pay period as the time off.

  The pay period is based on two Required Pay Period Hours settings, **Pay Period** and **Start Date**, defined on the Request Management Settings page (under Organization Management then Request Management).

> For the organization week, scheduling period, and pay period options: When the time off crosses periods due to the shift assignment crossing periods, then the entire time off is attributed to the first period. Therefore, the make-up time must start and end in the same first period.

- **Makeup must occur as soon as possible and no later than** <*number*> **days.** This rule is violated if earlier suitable flex makeup times occur before the proposed flex makeup time (excludes flex time with adjustable breaks).
- **Scheduled calendar event activities that time off must avoid** <**All** or specific calendar event>**.** This rule is violated if the flex time request falls within a calendar event activity which must be avoided.
- **Request complies with filing rules.** This rule is violated if the request submittal date violates at least one of the filing rules applicable to the employee's organization
- **Makeup time complies with the organization hours of operation.** This rule is violated if the flex makeup time specified in the flex time request does not fall within the hours of operation for the organization.
- **Maximum consecutive working days allowed as per organization settings.** This rule is violated if the requested flex makeup time on a non-working day causes the employee to exceed the maximum number of shifts defined in the **Maximum consecutive working days to schedule** organization setting. (This setting is located on the Organization Settings page, under Scheduler Options.)
- **Minimum required time gap between consecutive shifts as per organization settings.** This rule is violated if consecutive shifts including the makeup shift are scheduled closer than the minimum time required between consecutive shifts.

Confidential and Proprietary Information of Verint Systems Inc.

- **Maximum paid duration allowed:** <*number*> **minutes per** <**Organization Day**> or **24 Hour Period**>**.** This rule is violated if the request causes the paid duration to exceed the user-defined duration allowed for the selected period. Shift length is not considered; however, all paid hours during the selected period are considered. For the paid duration calculation, only paid hours are counted. Shift work (normal shifts, overtime, overtime extension) and time off are counted as paid hours. Flex time off segments are not counted as paid hours.

  For the reference period that defines the day, select from the following options:

  - **Organization Day**: If all employees only have shifts that start and end in the organization day boundary, use this option.
    During validation, the duration calculation uses the time period defined for the organization day. The organization day is defined on the Organization Setting page (located on the Organization Management menu, under Hierarchies). If the maximum paid duration threshold is exceeded, an alert is generated.

  - **24 Hour Period**: If any employees have shifts that cross the organization day boundary (shift starts on one day and ends on another day), use this option.
    During validation, the duration calculation uses a sliding 24-hour window that increments by 15 minutes. The sliding window begins 24 hours + 15 minutes before the request start time and stops at 24 hours - 15 minutes after the request end time. If the maximum paid duration threshold is exceeded in a 24-hour window, the rule is violated. No more 24-hour windows are checked, and an alert is generated.

- **Minimum paid duration allowed:** <*number*> **minutes per** <**Organization Day** or **24 Hour Period**>**.** This rule is violated if the request for a makeup extension on a nonworking day causes the employee to fall under the user-defined duration allowed for the selected period. Shift length is not considered; however, all paid activities during the selected period are considered. For the paid duration calculation, only paid hours are counted. Shift work (normal shifts, overtime, overtime extension) and time off are counted as paid hours. Flex time off segments are not counted as paid hours.

  For the reference period that defines the day, select from the following options:

  - **Organization Day**: If all employees only have shifts that start and end in the organization day boundary, use this option.
    During validation, the duration calculation uses the time period defined for the organization day. The organization day is defined on the Organization Setting page (located on the Organization Management menu, under Hierarchies). If the minimum paid threshold is not met, an alert is generated.

  - **24 Hour Period**: If any employees have shifts that cross the organization day boundary (shift starts on one day and ends on another day), use this option.

    During validation, the duration calculation uses a sliding 24-hour window that increments by 15 minutes. The sliding window begins 24 hours + 15 minutes before the request start time and stops at 24 hours - 15 minutes after the request end time. If the minimum paid duration threshold is not met after checking all windows, an alert is generated.

- **A minimum of** <*x*>**percent of changed intervals improves net staffing based on all queues that the employee is** <eligible to work or assigned to work> **for the request duration**. This rule is violated when the percentage of queue intervals that will be changed by the request is less than the specified minimum percentage for net staffing improvement in the queues. Both the time off

Confidential and Proprietary Information of Verint Systems Inc.

portion and each make up portion of the request are evaluated. When any portion of the request fails validation, an alert is displayed for the request. The alert specifies which portion failed validation: the time off portion or any of the make up portions.

The minimum staffing level percentage is calculated as follows:

Improvement Percentage = (#periods where net staffing is improved / (#periods where net staffing is improved + #periods where net staffing is worsened))*100

Shift Swap Request Validation rules section

- **Both employees are from the same organization.** This rule is violated if employees are assigned to different organizations.
- **Both employees are from the same campaign.** This rule is violated if both shifts in a swap do not belong to the same campaign. They can be in different campaign weeks.
- **Both employees have the same skills for the active campaign queue.** This rule is violated if the receiving employee does not have the same skills as the employee currently scheduled to work the shift.
- **Both employees have at least same skills for the active campaign queue.** This rule is violated if the receiving employee does not have at least the same skills as the employee currently scheduled to work the shift. Receiving employees with additional skills will not cause a violation.
- **Both employees have the required skills to work the swapped shifts.** This rule is violated if the employee or employees receiving a shift or partial shift do not have the required skills for the activities during that shift or partial shift.
  - One-way shift swap: When the employee receiving the shift does not have the skills to work all activities in the shift, this rule is violated.
  - Two-way shift swap: When a minimum of one of the two employees receiving a shift does not have the skills to work all activities in the shift, this rule is violated.
  - One-way partial shift swap: When the employee receiving the partial shift does not have the skills to work all activities in that partial shift, this rule is violated.
  - Two-way partial shift swap: When a minimum of one of the two employees receiving a partial shift does not have the skills to work all activities in that partial shift, this rule is violated.
- **Both employees have the same proficiencies for the active campaign queue.** This rule is violated if the receiving employee does not have the same skills and proficiencies as the employee currently scheduled to work the shift.
- **Request complies with filing rules.** This rule is violated if the request submittal date violates any of the filing rules applicable to the employee's organization.
- **Both employees comply with min/max hours.** This rule is violated if, after the swap, at least one of the employees will not comply with the min/max hours during the corresponding week(s) of the shift they get and the shift they give away in the swap.
- **Swapped shifts start on the same organization week.** This rule is violated if the swapped shifts do not fall in the same organization week.

Confidential and Proprietary Information of Verint Systems Inc.

- **Swapped shifts have the same paid hours.** This rule is violated if the total duration of paid time in the two shifts is different.
- **Swapped shifts must overlap the exact same portion with scheduled calendar events and time offs, and not overlap unavailabilities.** This rule is violated if the following events occur:
  - Calendar events, which may or may not be inside a shift, do not overlap the same portion of the swapped-in shift.
  - Time off events, which may or may not be inside a shift, do not overlap the same portion of the swapped-in shift.
  - Any unavailability type event will overlap with the swapped shifts as the result of the swap.
- **Swapped shifts will overlap scheduled calendar events that must occur during a shift.** This rule is violated if calendar events, which have to be inside a shift, fall outside shifts as the result of the swap.
- **Partial Shift Swap: Minimum duration of the shift that can be swapped:** <*number*> **Percent** or **Minutes.** This rule is violated if the duration of the swapped shift is less than the specified duration.
- **Partial Shift Swap: Minimum duration of the shift to leave after pickup:** <*number*> **Percent** or **Minutes.** This rule is violated if the remaining shift duration after the swap is less than the specified duration.
- **Maximum paid duration allowed:** <*number*> **minutes per** <**Organization Day** or **24 Hour Period**>**.** This rule is violated if the request causes the paid duration to exceed the user-defined duration allowed for the selected period. Shift length is not considered; however, all paid hours during the selected period are considered. For the paid duration calculation, only paid hours are counted. Shift work (normal shifts, overtime, overtime extension) and time off are counted as paid hours. Flex time off segments are not counted as paid hours.

  For the reference period that defines the day, select from the following options:

  - **Organization Day**: If all employees only have shifts that start and end in the organization day boundary, use this option.
    During validation, the duration calculation uses the time period defined for the organization day. The organization day is defined on the Organization Setting page (located on the Organization Management menu, under Hierarchies). If the maximum paid duration threshold is exceeded, an alert is generated.
  - **24 Hour Period**: If any employees have shifts that cross the organization day boundary (shift starts on one day and ends on another day), use this option.

    During validation, the duration calculation uses a sliding 24-hour window that increments by 15 minutes. The sliding window begins 24 hours + 15 minutes before the request start time and stops at 24 hours - 15 minutes after the request end time. If the maximum paid duration threshold is exceeded in a 24-hour window, the rule is violated. No more 24-hour windows are checked, and an alert is generated.
- **Partial Shift Swap: Activities that cannot be included in the swap:** <*activity name(s) from drop-down*>. This rule is violated if the swap includes any of the specified activities.

Confidential and Proprietary Information of Verint Systems Inc.

- **Gap should be between** *<number>* **and** *<number>* **minutes, or at least** *<number>* **minutes.** This rule is violated if the gap created as a result of the swap is outside the specified range, or if the gap is less than the specified duration. If both the range and the minimum are specified, the rule will be violated only if both the conditions are violated.
- **Maximum overlap with an existing shift:** *<number>* **minutes.** This rule is violated if the overlap with an existing shift caused due to the swap is greater than the specified duration.
- **Maximum consecutive working days allowed as per organization Settings.** This rule is violated if the maximum consecutive working days limit is exceeded.

  This rule only checks the start of shifts (not the end dates).

  The **Maximum consecutive working days to schedule** set on the **Organization Settings** page. under the **Scheduler Options** section. This page is located on **Organization Management**, under **Hierarchies**. For example, if the maximum consecutive working days count is set to three, and Employee A is requesting a one-way shift swap from 4/1 to 14/1 then the rule would validate if this shift swap would violate the maximum consecutive working day count for shifts from 1/1 to 1/17, and for the period 1/11 to 1/17.
- **Minimum required time gap between consecutive shifts as per organization Settings.**

  This rule is violated if the minimum time between the end of a first shift and the start of the next shift for all types of shift swap requests is not met.

  The **Minimum time between shift assignments is** set on the **Organization Settings** page. under the **Scheduler Options** section. This page is located on **Organization Management**, under **Hierarchies**.
- **Maximum number of** *<number>* **one-way shift swap requests per**<**Month** or **Quarter**>**.** This rule is violated if the number of one-way shift swaps requested exceeds the maximum number of one-way shift swap requests allowed per month or quarter.

  When this rule is selected for an employee's organization, the One Way Shift Swap section is available on the following pages:

  - **Time Summary**: This page is located on **Tracking**, under **Roster**.
  - **My Schedule Summary**: This page is located on **My Home**, under **My Schedule**.)

    This rule does not count a swap against the one-way swap limit if the employee picks up another shift on the day that was previouly given away.
- **Maximum number of approved swaps for a shift** *<number>***.** This rule is violated if the shift swap requested exceeds the maximum number of shift swaps allowed per shift.
- **Partial Shift Swap: Limit number of employees involved to** *<number>***.** This rule is violated if the number of employees who can receive swaps from the same shift is exceeded. This rule is limited to partial swaps.
- **Maximum hours per day** *<number>* **with an alternate maximum hours of** *<number>* **the day after the swap when the maximum hours were reached the day before.** This rule is violated if either condition one or condition two is met.

Confidential and Proprietary Information of Verint Systems Inc.

- **Condition one**: **Maximum hours per day** <*number*>

  This rule condition is violated if the maximum hours per day limit is exceeded due to a shift swap (that is, an employee works a standard shift and picks up a shift from another employee).

- **Condition two**: **with an alternate maximum hours of** <*number*> **the day after the swap when the maximum hours were reached the day before.**

  This rule condition is violated if the maximum hours in the day after a shift swap limit is exceeded after the maximum hours per day limit was reached on the previous day.

  Example of completed rule:

  Maximum hours per day 12 with an alternate maximum hours of 10 the day after the swap when the maximum hours were reached the day before.

  Example of results:

  - **Condition one**: If Employee A's standard shift is 8 hours AND Employee A submits a request to pickup a 4-hour shift from Employee B on Monday, then the first condition of this rule is not violated. The maximum hours per day limit is *reached*, but not *exceeded*.
  - **Condition one**: If Employee C's standard shift is 8 hours AND Employee C submits a request to pickup a 6-hour shift from Employee D on Monday, then the first condition of this rule is *violated*. The maximum hours per day limit is *exceeded*.
  - **Condition two**: If Employee A's shift swap request for Monday is approved (total of 12 hours), AND Employee A submits a request to swap their 8-hour shift with Employee E's 12-hour shift on the next day (Tuesday), then the rule is violated. The 12-hour work day on Tuesday exceeds the 10-hour limit for the day after a swap that reached the maximum hours limit per day.

- **Request complies with Required Pay Period Hours.** This rule is violated if the employee's shift swap request would cause the employee not to meet the minimum hours in a pay period.

  Tracking for the Required Pay Period Hours is set up on the **Settings** page. This page is located on **Organization Management**, under **Request Management**. When this setting is selected for an employee's organization, the Required Hours (balance) for Pay Period section is available on the following pages:

  - **Time Summary**: This page is located on **Tracking**, under **Roster**.
  - **My Schedule Summary**: This page is located on **My Home**, under **My Schedule**.

  One or more time-off activities must be set up to deduct from the Required Pay Period Balance. (This setting is on the **Activities** page, under the **Request Management Usage** section. This page is located on **Work Administration**, under **Activities**.

Approved Shift Swap Withdrawal Validation rules section

- **Request complies with filing rules.** This rule is violated if the withdrawal request submittal date violates any of the filing rules applicable to the requester's organization.

Confidential and Proprietary Information of Verint Systems Inc.

Shift Bidding Request Validation rules section

- **Request complies with filing rules.** This rule is violated if the request submittal date violates any of the filing rules applicable to the employee's organization.
- **Employee's schedule complies with min/max hours, including overtime maximums.** This rule is violated if the requested schedule does not comply with the employee's min/max hours for the week of the auction including the maximum overtime allowed per day or week.
- **Employee has the same skills as required for the selected schedule.** This rule is violated if the employee does not have the same skills as the phantom employee the schedule was generated for. If an employee has more skills than required, this rule is violated.
- **Employee has sufficient skills for the selected schedule.** This rule is violated if the employee does not have some skills in common with the phantom employee the schedule was generated for.
- **Employee's schedule complies with organization hours of operation.** This rule is violated if any of the requested shifts in the shift bid fall outside the employee organization's hours of operation.

Shift Requests and Changes Validation rules section

- **A minimum of** <*x*> **percent of changed intervals improves net staffing.** This rule is violated when the percentage of intervals that will be changed by the request is less than the specified minimum percentage for net staffing improvement. Gaps between shifts and extensions are not included.

  The minimum staffing level percentage is calculated as follows:

  Improvement Percentage = (#periods where net staffing is improved / (#periods where net staffing is improved + #periods where net staffing is worsened))*100

- **Maximum paid duration allowed:** <*number*> **minutes per** <**Organization Day** or **24 Hour Period**>**.** This rule is violated if the request causes the paid duration to exceed the user-defined duration allowed for the selected period. Shift length is not considered; however, all paid hours during the selected period are considered. For the paid duration calculation, only paid hours are counted. Shift work (normal shifts, overtime, overtime extension) and time off are counted as paid hours. Flex time off segments are not counted as paid hours.

  For the reference period that defines the day, select from the following options:

  - **Organization Day**: If all employees only have shifts that start and end in the organization day boundary, use this option.
    During validation, the duration calculation uses the time period defined for the organization day. The organization day is defined on the Organization Setting page (located on the Organization Management menu, under Hierarchies). If the maximum paid duration threshold is exceeded, an alert is generated.
  - **24 Hour Period**: If any employees have shifts that cross the organization day boundary (shift starts on one day and ends on another day), use this option.

Confidential and Proprietary Information of Verint Systems Inc.

During validation, the duration calculation uses a sliding 24-hour window that increments by 15 minutes. The sliding window begins 24 hours + 15 minutes before the request start time and stops at 24 hours - 15 minutes after the request end time. If the maximum paid duration threshold is exceeded in a 24-hour window, the rule is violated. No more 24-hour windows are checked, and an alert is generated.

- **Minimum paid duration allowed:** <*number*> **minutes per** <**Organization Day** or **24 Hour Period**>**.** This rule is violated if the request causes the employee to fall under the user-defined duration allowed for the selected period. Shift length is not considered; however, all paid activities during the selected period are considered. For the paid duration calculation, only paid hours are counted. Shift work (normal shifts, overtime, overtime extension) and time off are counted as paid hours. Flex time off segments are not counted as paid hours.

  For the reference period that defines the day, select from the following options:

  - **Organization Day**: If all employees only have shifts that start and end in the organization day boundary, use this option.
    During validation, the duration calculation uses the time period defined for the organization day. The organization day is defined on the Organization Setting page (located on the Organization Management menu, under Hierarchies). If the minimum paid threshold is not met, an alert is generated.

  - **24 Hour Period**: If any employees have shifts that cross the organization day boundary (shift starts on one day and ends on another day), use this option.

    During validation, the duration calculation uses a sliding 24-hour window that increments by 15 minutes. The sliding window begins 24 hours + 15 minutes before the request start time and stops at 24 hours - 15 minutes after the request end time. If the minimum paid duration threshold is not met after checking all windows, an alert is generated.

- **Minimum duration of the activity** <*adjustable break activity or shift gap activity*> **is** <*number*> <**Minutes** or **Hours**> after an extension during the activity. This rule is violated if the minimum duration of the selected activity will not be met after an extension during the activity. (Until shift event activities are created for adjustable breaks or shift gaps, the list of break activities is empty.) Example - adjustable break activity: Employees get a 60 minute, unpaid lunch break for a shift that exceeds six hours. By law, they are required to take 30 minutes for lunch. You can define this rule with a minimum activity duration of 30 minutes to prevent employees from making their lunch break too short.
  Two break segments can occur due to a gap--one segment before and one segment after the work extension. Only one of these break segments must meet the minimum duration requirement in this rule.

  If you are defining this rule for multiple activities with the same duration, you can select all applicable activities and enter the duration once. If you are defining this rule for activities with different durations, define each activity separately. Also, you can save or cancel all activities at one time instead of processing them individually. By default, the first adjustable break activity shows in the list box.

  To remove a maximum duration for an activity, set the duration to *blank* and save the change.

- **Maximum consecutive working days allowed as per organization Settings.** This rule is violated if the request causes the user to exceed the maximum number of consecutive working days that has been defined for the organization.

Confidential and Proprietary Information of Verint Systems Inc.

- **Minimum required time gap between consecutive shifts as per organization Settings.** This rule is violated if approving the shift change request results in the minimum time gap between shifts being violated. The time gap is determined by comparing the start time of the requested shift with the end time of the preceding shift; in addition the end time of the requested shift is checked against the start time of the succeeding shift.
- **Request complies with filing rules.** This rule is violated if the request submittal date violates any of the filing rules applicable to the employee's organization.
- **Employee's schedule complies with min/max hours, including OT maximums.** This rule is violated if approving the request causes the employee not to meet or to exceed the minimum or maximum hours allowed respectively, including the maximum overtime allowed per day/week.
- **Employee's schedule complies with organization hours of operation.** This rule will generate an alert if approving the request causes the employee's working hours to fall outside the defined hours of operation for the organization.
- **Request does not overlap with a time off event.** This rule is violated if the request overlaps with a time-off event.
- **Request does not overlap with an unavailability.** This rule is violated if the shift change request overlaps with an unavailability.
- **Request period is published.** This rule is violated if the request date and time range falls outside a published period. If any part of the shift is outside a published period, the validation fails.
- **Request complies with Required Pay Period Hours.** This rule is violated if the request would cause the employee to not meet the minimum hours in a pay period.

  Tracking for the Required Pay Period Hours is set up on the **Settings** page. This page is on **Organization Management**, under **Request Management**. When this setting is selected for an employee's organization, the Required Hours (balance) for Pay Period section is available on the following pages:

  - **Time Summary**: This page is located on **Tracking**, under **Roster**.
  - **My Schedule Summary**: This page is located on **My Home**, under **My Schedule**.

Approved Shift Requests and Changes Withdrawal Validation rules section

- **Request complies with filing rules.** This rule is violated if the withdrawal request submittal date violates any of the filing rules applicable to the requester's organization.

VTO options request validation rules

A subset of the time-off request validation rules verifies VTO options requests. These rules must be turned on to be effective.

Rules validated when a VTO request is submitted

- Request avoids days where time off is not allowed.
- Request complies with filing rules.
- Requested time-off is for a past date.
- Requested time is not being swapped.

Rules validated when processing VTO options requests with a group action

- Time Off Pool has available time-off hours.
- Scheduled calendar event activities that the request avoids.
- Request complies with Required Pay Period Hours.

Create a filing rule for time-off requests

You can create a filing rule to specify when time-off request must be submitted. When time-off requests are submitted, a validation rule verifies that the requests comply with the filing rule for the time-off type in the request.

After a rule has been created for an organization, you can copy it to another organization to save time. The **copy to** organization becomes an owner organization of the rule too (as if the rule was created by the organization).

> If the following time-off validation rule is not selected, the filing rule is not effective:
>
> Request complies with filing rules.

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Filing Rules**.
2. In the left pane, click an organization.
3. Click **Create New Rule**.
4. Click **Time Off**.
5. In the **Filing Rules** workspace, complete the settings.
6. Click **Save**.

Filing rules list page

Filing rules set the protocols that an employee must follow to file various types of requests.

Column	Description
Apply	Indicates whether the rule applies to the currently selected organization under **Organization Name**. For sub-organizations, it depends on the **Apply to sub-orgs** options when creating a filing rule. You can apply the rule to the organization for which you are creating the rule and to its sub-organizations (the default). Alternatively, you can apply the rule to the parent organization *only*.
Request Type	Indicates the type of request for this filing rule.

Confidential and Proprietary Information of Verint Systems Inc.

Column	Description
Which Request	Indicates the criteria that is used to determine which requests are affected by the rule. When creating a request, you can select to have **all requests of this type** affected by the rule, or only requests submitted for a specific day of the week or date and time range.
When to file	Specifies when the request (of the specified type) must be filed in relation to a specific date or date range. For example, you can specify for Vacation time-off requests to be filed more than 5 days in advance before June 1, 2017.
Owner Organization	Indicates the organization for which the rule was created. To edit a rule, select the owner organization and click **Edit Rule**.

Time-off request filing rule settings

Use these settings to create a filing rule for time-off requests.

Location

Go to **Organization Management**. Under **Request Management**, select **Filing Rules** page (when the selected request type is Time Off).

Settings

Field	Description
Time off requests affected by the rule you are creating	Two settings determine which requests are affected by this rule. • Time off type list: Specifies time-off requests for this time off type (activity) are affected. • Specifies which requests of the selected time off type are affected: ▪ All requests of this type (default setting) ▪ For (limited to requests submitted for a weekend, specific day of the week, or working holiday) ▪ For (limited to requests submitted for a specific date and time range)
Request must be filed	Two settings with multiple options are available. • Use the first setting to create a rule that a request must be submitted on, before, or after a *specific* date and time. • Use the second setting to create a rule that controls whether a request can be made for dates that occur in the future or the past and specify the time period for the requested dates: ▪ If you want to allow requests for future dates and want to limit the time period of the requested future dates, then create an *in advance* rule that specifies the time period the request dates must occur in. ▪ If you want to allow requests for past dates and want to limit the time period of the requested past dates, then create an *in the past* rule that specifies the time period the request dates must occur in. ▪ If you do not want to allow requests for any dates in the past, then create an *in the past* rule and specify zero days.
Apply to sub-orgs	Specifies whether this rule applies only to the organization or to the organization and its suborganizations.

Time-off requests settings

Field	Description
Time off requests affected by the rule you are creating	Two settings determine which requests are affected by this rule. • Time off type list: Specifies time-off requests for this time off type (activity) are affected. • Specifies which requests of the selected time off type are affected: ▪ All requests of this type (default setting) ▪ For (limited to requests submitted for a weekend, specific day of the week, or working holiday) ▪ For (limited to requests submitted for a specific date and time range)
Request must be filed	Two settings with multiple options are available. • Use the first setting to create a rule that a request must be submitted on, before, or after a *specific* date and time. • Use the second setting to create a rule that controls whether a request can be made for dates that occur in the future or the past and specify the time period for the requested dates: ▪ If you want to allow requests for future dates and want to limit the time period of the requested future dates, then create an *in advance* rule that specifies the time period the request dates must occur in. ▪ If you want to allow requests for past dates and want to limit the time period of the requested past dates, then create an *in the past* rule that specifies the time period the request dates must occur in. ▪ If you do not want to allow requests for any dates in the past, then create an *in the past* rule and specify zero days.
Apply to sub-orgs	Specifies whether this rule applies only to the organization or to the organization and its suborganizations.

Confidential and Proprietary Information of Verint Systems Inc.

Approved time-off withdrawal request settings

Field	Description
Request must be filed	Use to create a rule that controls whether a request can be made for dates that occur in the future or the past and specify the time period for the requested dates • If you want to allow requests for future dates and want to limit the time period of the requested future dates, then create an *in advance* rule that specifies the time period the request dates must occur in. • If you want to allow requests for past dates and want to limit the time period of the requested past dates, then create an *in the past* rule that specifies the time period the request dates must occur in. • If you do not want to allow requests for any dates in the past, then create an *in the past* rule and specify zero days.
Apply to sub-orgs	Specifies whether this rule applies only to the organization or to the organization and its suborganizations.

Flex time request settings

Field	Description

Flex time requests affected by the rule you are creating	Three settings determine which requests are affected by this rule.
	• Time off type list: Specifies time-off requests for this time off type (activity) are affected.
	• Specifies whether the rule affects requests for flex time before or after the makeup time.
	• Specifies which requests of the selected time off type are affected:
	  ▪ All requests of this type (default setting)
	  ▪ For (limited to requests submitted for a weekend, specific day of the week, or working holiday)
	  ▪ For (limited to requests submitted for a specific date and time range)

Request must be filed	Controls whether a request can be made for dates that occur in the future or the past and specifies the time period for the requested dates: • If you want to allow requests for future dates and want to limit the time period of the requested future dates, then create an *in advance* rule that specifies the time period the request dates must occur in. • If you want to allow requests for past dates and want to limit the time period of the requested past dates, then create an *in the past* rule that specifies the time period the request dates must occur in. • If you do not want to allow requests for any dates in the past, then create an *in the past* rule and specify zero days.

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Apply to sub-orgs	Specifies whether this rule applies only to the organization or to the organization and its suborganizations.

Shift swap request settings

Field	Description
Shift Swap Requests affected by this rule	Specifies which requests are affected: • All requests of this type (default setting) • For (specific date and time range)
Request must be filed	Two settings with multiple options are available. • Use the first setting to create a rule that a request must be submitted on, before, or after a *specific* date and time. • Use the second setting to create a rule that controls whether a request can be made for dates that occur in the future and specify the time period for the requested dates.
Apply to sub-orgs	Specifies whether this rule applies only to the organization or to the organization and its suborganizations.

Approved shift swap withdrawal requests

Field	Description
Request must be filed	Use to create a rule that controls whether a request can be made for dates that occur in the future and specify the time period for the requested dates.
Apply to sub-orgs	Specifies whether this rule applies only to the organization or to the organization and its suborganizations.

Shift bidding request settings

Field	Description
Request must be filed	Use to create a rule that requires bids be submitted in a specified time period before the auction deadline.
Apply to sub-orgs	Specifies whether this rule applies only to the organization or to the organization and its suborganizations.

Confidential and Proprietary Information of Verint Systems Inc.

Shift request & change settings

Field	Description
Shift Requests and Changes affected by this rule	Specifies which types of regular and overtime requests are affected.
Requested Dates	Specifies which requests are affected based on the request date: • All requests of this type (default setting) • For (limited to requests that start between a specific date and time range)

Request must be filed	Two settings with multiple options are available.
	• Use the first setting to create a rule that a request must be submitted on, before, or after a *specific* date and time.
	• Use the second setting to create a rule that controls whether a request can be made for dates that occur in the future or the past and specify the time period for the requested dates:
	  ▪ If you want to allow requests for future dates and want to limit the time period of the requested future dates, then create an *in advance* rule that specifies the time period the request dates must occur in.
	  ▪ If you want to allow requests for past dates and want to limit the time period of the requested past dates, then create an *in the past* rule that specifies the time period the request dates must occur in.
	  ▪ If you do not want to allow requests for any dates in the past, then create an *in the past* rule and specify zero days.

Apply to sub-orgs	Specifies whether this rule applies only to the organization or to the organization and its suborganizations.

Approved shift request and change withdrawal settings

Field	Description
Approved Shift Request & Change Withdrawal Requests affected by the rule you are creating	Specifies which types of regular and overtime requests are affected.
Request must be filed	Use to create a rule that controls whether a request can be made for dates that occur in the future and specify the time period for the requested dates.
Apply to sub-orgs	Specifies whether this rule applies only to the organization or to the organization and its suborganizations.

Create an autoprocessing rule for time-off requests

Instead of processing time-off requests manually, you can save time by creating an autoprocessing rule. The system uses this rule to approve, waitlist, and deny requests that violate time-off request validation rules.

After an autoprocessing rule has been created for an organization, you can copy it to another organization to save time. The **copy to** organization becomes an owner organization of the rule too (as if the rule was created by the organization).

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Autoprocessing**.
2. On the **Autoprocessing** list page, click **Create New Rule**.
3. On the **Create New Autoprocessing Rule** popup, click **Time Off**.

   The **Autoprocessing** rule form is displayed.
4. Optional: Under **Apply to sub-orgs**, click a sub-org option.
5. Under **Time Off Requests affect by this rule**, click one of the options.
6. Under **Autoprocessing Criteria**, do the following to set up auto-processing criteria for approval, waitlist (when available), and denial:

   a. Based on the autoprocessing action you want to define, select one of the following check boxes:

      - **Approval Criteria**
      - **Waitlist Criteria** (Available when Waitlists are set up.)
      - **Denial Criteria**

   b. Click one of the autoprocessing options.

   c. If you selected the option that requires validation rules for the auto-processing criteria, select one or more of the rules shown in **bold**. This convention indicates which validations rules are configured for this organization. If you select any other rules, they are ignored.

   d. Repeat these steps until you have completed the auto-processing criteria for all actions that you want to use for this request type.
7. Click **Save**.

Auto processing list page

On this page, you can manage all actions related to autoprocessing rules for all request types.

You can do the following:

- Access the rule form to create a rule or edit an existing rule.
- Copy a rule from one organization to another.
- Change the rule from active to inactive for an organization.
- Delete a rule.

Column	Description
Apply	This check box provides the following functions: • Indicates the status of the rule for the selected organization. When the check box is selected, the rule is active (applied to the organization). When the check box is clear, the rule is inactive (not applied to the organization). • When the check box is available, it can be selected or cleared to change the status of the rule for the selected organization.
Request Type	Identifies which request type this rule autoprocesses.
Which Request	Identifies which requests this rule autoprocesses.
How to Auto-Process	Identifies the auto-processing criteria used by this rule. When the criteria is a validation rule, the rule icon is shown. You can point to an icon to view the name of the rule.
Owner Organization	Identifies the organization that either created the rule or the *copy to* organization. Only the owner organization can edit or delete the rule.

Apply to sub-orgs section

This section provides options to exclude or include suborganizations from this rule.

Field	Description
Apply to this org only	Rule applies only to the organization, and not to its suborganizations.
Apply to sub-orgs (no overrides)	Rule applies to the organization and its sub-organizations. The suborganizations cannot change the status of the rule or edit it.
Apply to sub-orgs (allow overrides)	Rule applies to the organization and its sub-organizations. The suborganizations can change the status of the rule, but cannot edit it.

Time-off requests affected by the rule you are creating section

This section provides options to limit which requests are auto-processed.

Field	Description
Time off type	Rule applies only to time-off requests with the selected time-off type (activity).
All requests of this type	All time-off requests are auto-processed for approval. No restrictions are applied.
For (specific day of the week, a weekend or working holiday)	Only requests submitted for the selected day of the week, a weekend, or a working holiday are autoprocessed for approval.
For (date range)	Only time-off requests submitted for the specified date range are autoprocessed for approval.

Confidential and Proprietary Information of Verint Systems Inc.

Autoprocessing Criteria - Approval

Use this section to select autoprocessing criteria for request approval. This section varies based on the request type.

Field	Description
Approval Criteria	When selected, autoprocessing approves requests based on the selected criteria.
The following three auto-approve options are available.	
Do not auto approve any requests	No requests are automatically approved. All requests must be approved manually.
Approve requests with no violations	Only requests that do not violate any validation rules configured for this request type are autoapproved.
Approve requests violating only:	The following requests are auto-approved: • Requests that do not violate any validation rules configured for this request type. • Requests that only violate the validation rules selected for approval criteria.

Autoprocessing Criteria - Waitlist

This section is available when the **Enable Time Off Waitlist** setting is selected on the General page. This page is located on System Management, under General Settings (Request Management section).

Field	Description
Waitlist Criteria	When selected, auto-processing is used to waitlist requests based on the selected criteria.
The following auto-waitlist options are available.	
Do not auto waitlist any requests	No requests are automatically put on the waitlist. All requests must be waitlisted manually.
Waitlist requests with at least one violation	Requests that violate one or more validation rules are waitlisted.
Waitlist requests violating only:	Requests that only violate the validation rules selected for waitlist criteria are waitlisted.

Auto-Processing Criteria - Denial

Field	Description
Denial Criteria	When selected, auto-denial is used to process requests based on the selected criteria.
The following auto-deny options are available.	
Do not auto deny any requests.	No requests are automatically denied. All requests must be denied manually.

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Deny requests with at least one violation.	Requests that violate *any* validation rules configured for this request type are automatically denied.
Deny requests violating:	Requests that violate the *selected* validation rules are automatically denied.

Apply to sub-orgs section

This section provides options to exclude or include suborganizations from this rule. These options are the same for all request types.

Field	Description
Apply to this org only	Rule is applied only to the organization, and not to its suborganizations.
Apply to sub-orgs (no overrides)	Rule is applied to the organization and its sub-organizations. The suborganizations cannot change the status of the rule or edit it.
Apply to sub-orgs (allow overrides)	Rule is applied to the organization and its sub-organizations. The suborganizations can change the status of the rule, but cannot edit it.

<name of request type> affected by the rule that you are creating section

This section provides options to limit which requests are auto-processed. The options vary based on the request type.

Field	Description
Time Off Type	Rule is applied only to time-off requests with the selected time-off type (activity). (Available for Time-Off Requests and Flex Time Requests)

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
(type of regular or overtime requests)	Only the selected regular time and overtime requests types are auto-processed for approval. Any or all the following types can be selected: • Regular time: New Shift and Shift Change • Overtime: New Shift and Shift Change (Available for Shift Requests and Change requests)
One of the following two fields is available for each request type.	
All requests of this type	All requests of this type are auto-processed for approval. No restrictions are applied.
All	
For (a specific day of the week, a weekend, or working holiday)	Only requests submitted for the selected day of the week, a weekend, or a working holiday are auto-processed for approval. (Available for Time-Off requests, Approved Time-off Withdrawal requests and Flex Time requests)
For (date range)	Only requests submitted for the specified date range are auto-processed for approval.

Auto-Processing Criteria - Approval

Use this section to select auto-processing criteria for request approval. This section varies based on request type.

Field	Description
Approval Criteria	When selected, auto-processing is used to approve requests based on the selected criteria.
The following three auto-approve options are available.	
Do not auto approve any requests	No requests are automatically approved. All requests must be approved manually.
Approve requests with no violations	Only requests that do not violate any validation rules configured for this request type are auto-approved.
Approve requests violating only:	The following requests are auto-approved: • Requests that do not violate any validation rules configured for this request type. • Requests that only violate the validation rules selected for approval criteria.

Auto-Processing Criteria - Waitlist

Available for Time-Off requests when the **Enable Time Off Waitlist** setting is selected on the System Management > General Settings > General page (under the Request Management section).

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Waitlist Criteria	When selected, auto-processing is used to waitlist requests based on the selected criteria.
The following auto-waitlist options are available.	
Do not auto waitlist any requests	No requests are automatically put on the waitlist. All requests must be waitlisted manually.
Waitlist requests with at least one violation	Request that violate one or more validation rules are waitlisted.
Waitlist requests violating only:	Requests that only violate the validation rules selected for waitlist criteria are waitlisted.

Auto-Processing Criteria - Denial

Field	Description
Denial Criteria	When selected, auto-denial is used to process requests based on the selected criteria.
The following auto-deny options are available.	
Do not auto deny any requests.	No requests are automatically denied. All requests must be denied manually.
Deny requests with at least one violation.	Requests that violate any validation rules configured for this request type are auto-denied.
Deny requests violating:	Requests that violate the validation rules selected for waitlist criteria are waitlisted?

Create an autoprocessing rule for approved time-off withdrawal requests

While approved time-off withdrawal requests can be processed manually, you can set up a rule for the system to process them automatically. An autoprocessing rule can be used to approve and deny requests based on the validation rules that you set.

After an autoprocessing rule has been created for an organization, you can copy it to another organization to save time. The **copy to** organization becomes an owner organization of the rule too (as if the rule was created by the organization).

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Autoprocessing**.
2. On the **Autoprocessing** list page, click **Create New Rule**.
3. On the **Create New Autoprocessing Rule** popup, click **Approved Time Off Withdrawal**.

   The **Autoprocessing** rule form is displayed.
4. Optional: Under **Apply to sub-orgs**, click a sub-org option.
5. Under **Approved Time Off Withdrawal Requests affect by this rule**, click one of the options.
6. Under **Autoprocessing Criteria**, do the following to set up auto-processing criteria for approval and denial:

   a. Based on the autoprocessing action you want to define, select one of the following check boxes:

      - **Approval Criteria**
      - **Denial Criteria**

   b. Click one of the autoprocessing options:

      - **Approve requests with no violations**
      - **Approve requests violating only:** (*selected validation rules*)

   c. If you select the option that requires validation rules for the autoprocessing criteria, select the available rule. If the rule is **bold**, it indicates the rule is effective for your organization; otherwise, it is ignored.

   d. Repeat these steps until you have completed the autoprocessing criteria for all actions that you want to use for this request type.
7. Click **Save**.

Create a special day

Special days are added to an organization's time off calendar to identify days where time off is not allowed, non-working holidays, and working holidays. Viewing special days on the calendar helps employees plan their time off requests and helps you manage these requests.

For special days created for Time Off Not Allowed, you can use a time off validation rule to check if a request avoids these days. In addition, you can create an auto processing rule to approve, waitlist, or deny requests that violate this validation rule. A special day *must* be associated with at least one time-off pool.

After a special day has been created for an organization, you can copy it other organizations. The *copy to* organizations becomes the owner organization of the rule as if it had created it.

Before you begin

Determine how you want to add special days to the system:

- If you want to add a few special days, use this procedure to create each one individually.
- If you want to add all special days for a long period such as multiple months or a year, consider the import option - see Import special days (page 80)
- Determine the time-off pool with which to associate the special day.

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Special Days**.
2. Optional: In the **View Year** list, select another year.
3. In the left pane, click an organization.
4. Click **Create Special Day**.
5. To define the special day, do the following:
   a. Type a descriptive name.
   b. Select the type.
   c. Choose a date range, and change the time if needed. For a single day, select the same day for both the From and To dates.
   d. Optional: Apply this special day to sub-orgs (no override allowed).
   e. Select a specific time off pool.

      By default, this is set to **All Pools**. The special day *must* be associated with at least one time-off pool.
6. Click **Save**.

Special Days list page

Use this page to manage special days.

From this page, you can do the following:

- Access the special day form to create or edit a special day
- Copy a special day to other organizations
- Delete a special day
- Import multiple special days using a .txt file

The view of the special days list varies based on whether you have used either the Time Off Pools page or the Time Off Calendar page during your current WFO session. Before using one of these pages in a session, the default list shows all special days for the current year. Afterward, the default list shows all special days in the last month selected on these pages.

On the top, right side of the page, the **Date Range** selector allows you to enter different dates for the special days list.

Column	Description
Special Day Name	Descriptive name of the special day.
Type	Indicates whether the special day is a Working Holiday, Non-working Holiday, or Time Off Not Allowed day.
Start Date	Date and time the special day starts.
End Date	Date and time the special day ends.
Owner Organization	The organization that can edit, copy, or delete a special day. The owner organization either created the day or the day was copied to it.
Apply to sub-orgs	Indicates whether the special day applies to sub-orgs or only to the organization.
Time Off Pool	Indicates whether the special day applies to all time off pools or a specific time off pool.

Confidential and Proprietary Information of Verint Systems Inc.

Special Days setting page

Use this page to create or edit a special day for an organization.

Field	Description
Organization Name	(*Display only*)
Special Day Name	Descriptive name of the special day.
Type	Identifies the type of special day. Choices are: • Non-Working Holiday (paid holiday). Employees do not need to submit a time-off request for these days. • Working Holiday (unpaid holiday). Employees can submit a time-off request for these days. • Time Off Not Allowed. Employees can submit a time-off request for these days. If a validation rule has been set up, an alert will be displayed on the request. On the time off pool, different colored icons indicate the types of special days. On the time off calendars, different colors indicate the types of special days.
Date Range	Start date and time, and end date and time.
Apply to sub-orgs	The following two options are available: • **Apply to this org only**: The special day only applies to the organization it was created in--the owner organization. • **Apply to sub-orgs (no overrides)**: This special day applies to the parent organization (owner organization) and its suborganizations. The sub-organization cannot change the special day. Only the owner organization can edit, delete, or copy it. The **Apply to sub-orgs (allow overrides)** option is not available for special days.
Time Off Pool	Specifies which time off pools the special day applies to (all pools or a single pool in the selected organization).

Import special days

Special days are added to an organization's time off calendar to identify days where time off is not allowed, non-working holidays, and working holidays. To save time when you have numerous special

Confidential and Proprietary Information of Verint Systems Inc.

days to enter, you can import them using a text file. When you want to create, edit, or delete individual special days, you can do it manually.

Before you begin

Create the import file - see Special days import file (page 82)

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Special Days**.
2. In the left panel, click an organization.
3. Optional: in the top, left part of the page, change the year.
4. From the Special Days list, click **Import**.
5. Complete the **Special Days Import** window, and click **Import**.
6. Do one of the following:
   - If there are errors, update the import file and import it again.
   - If there are no errors, you can review the import results on the Special Days list page.

Confidential and Proprietary Information of Verint Systems Inc.

Special days import file

When you have numerous special days to define, you can import them using a text file.

When you want to create, edit, or delete a few special days, you can do it manually.

Import file format

- Use a column delimiter such as tab, comma, or semicolon.
- Start each special day on a new line.
- Convert other file formats such as Microsoft Excel to text files before importing them.
- Create the text (.txt) file using the following format:

  <special day> <start date> <start time> <end date> <end time> <organization scope> <type> <time off pool>

  Where:

  - <special day> specifies the name of the special day.
  - <start date> specifies the first date of the special day in your regional date format (month, day, and year).
  - <start time> specifies the start time in your regional time format.
  - <end date> specifies the last date of the special day in your regional date format (month, day, and year). For a single day, use the same day for both the Start and End dates.
  - <end time> specifies the end time in your regional time format.
  - <organization scope> specifies the organization the special day applies to. Values are:
    - For apply to this org only - thisOrgOnly
    - For apply to sub-orgs (no override) - subOrgNoOverride
  - <type> specifies the type of special day. Values are:
    - For a No Time Off Allowed day- NoTimeOff
    - For a Non-working Holiday - NonWorking
    - For a Working Holiday - Working
  - <time off pool> optional. When you want the special day added to a single pool, add the pool name. When blank, the special day is added to all time off pools in an organization.

Error handling

- Duplicate rows are not imported, and the import fails.
- The End Date must be the same or later than the Start Date.
- The End Time must be larger than the Start Time

Time-off pools overview

Time-off pools let you allocate how much time-off a group of employees can take for a specific time period. A time-off pool can have time-off allocations for a day, segments of a day, or both.

Time-off pools are created for an organization, and an organization can have multiple time-off pools. Hours in requests for time-off activities that deduct from a time-off pool affect the hours displayed on the Time-Off calendar.

Daily allocations time-off pool

A set number of hours are allocated for each 24-hour day for employees to use for time-off. Requests for an entire day are deducted from the daily allocations time-off pool.

Example: Daily Allocations

- On Monday, May 1, 16 hours are allocated for time-off.
- Tom and Lisa both submit a time-off request for May 1. Their requests are approved, and zero hours remain for May 1 in this time-off pool now. The next request for May 1 will be either denied or waitlisted.

Organization time zones in daily allocations time-off pool

When employees submit time-off requests, the requested time off is converted to their organization time zone and hours are deducted from the daily pool based on the organization time zone.

For example:

There is a time-off pool in an organization in the Eastern Standard Time Zone (EST).

Employee A has a preferred time zone of EST, the same as their organization. Employee A submits a time-off request for February 2, which is calculated as 8 hours (by default). The time-off pool reflects 8 hours pending on February 2, and the request is validated against that same day.

Employee B has a preferred time zone of Central Time Zone (CST), which is different than their organization (EST). Employee B submits a time-off request for February 2 (12:00 AM-12:00 PM). The request is converted to the organization time zone, which is February 1 at 11:00 PM to February 2 at 11:00 PM. The time-off pool reflects 1 hour on February 1 and 8 hours on February 2.

> If you want a full day request to be validated against the same full day in the pool, you can instruct employees to submit time-off requests with the time zone that matches their organization time zone. Employees can change their time zone from the **User Actions** menu. From **Preferences**, select the **General** tab. Under **Regional Settings**, define your preferred **Time Zone**.

Interval allocations time-off pool

A set number of hours are allocated for segments of time during a day for employees to use for time-off. The segments can be as small as 15 minutes. Requests for time-off during a specific time range during the day are deducted from this pool.

Example: Interval 1 definition

- Start and end time: 6:00 A.M. to 8:15 A.M. for a duration of 2 hours and 15 minutes
- 3 hours are allocated for time off during this interval

Confidential and Proprietary Information of Verint Systems Inc.

Example: Interval 2 definition

- Start and end time: 1:00 P.M. to 4:45 P.M for a duration of 3 hours and 45 minutes
- 2 hours are allocated for time off during this interval

Interval allocation time-off pool considerations

To determine the range of hours to target for pool availability, employees in an organization with any activity set up to deduct from an interval allocations time-off pool must have either a published schedule for the requested time-off or a reference schedule. Otherwise, an error occurs.

- If you use the interval time-off pool for *near-term activities* when the employee would have a published schedule (such as voluntary time-off), you do not need to assign a reference schedule to the employees.
- If you use the interval time-off pool for *future activities* that occur when the employee does not have a published schedule, you must assign a reference schedule to the employees. For the reference schedule, select a one-week published schedule that best represents the employee's typical work week.

Related information

Organization Activity Details (*Workforce Management Administration Guide*)

Create a time-off pool

Create a time-off pool to define how much time can be taken off for a specific time period. A time-off pool can have time-off allocations for each day, segments of each day, or both.

If you need to stop before you have finished, you can edit the time-off pool later.

Before you begin

- Make sure you understand the two types of allocations available in a time off pool: daily and interval.
- Create activities that deduct from a daily allocation time-off pool, interval allocation time-off pool, or both. Activities are set up on the Activities page. This page is on the **Work Administration** menu.
- Determine if you want to import the daily allocation hours or interval allocation hours instead of adding them to the calendar manually. The import option is available after the time-off pool is created.) Next, decide if you want to import allocations when you create the time-off pool or later. If you want to import allocations now, pause and create the import file.

Confidential and Proprietary Information of Verint Systems Inc.

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Time Off Pools**.
2. Click **Create**.
3. In the **Time Off Pools Detail** section, do the following:
   a. Type a name.
   b. Optional: Type a description.
4. Optional section: In the **Time Off Waitlist** section, do the following if you want to set up one or both waitlist options:
   a. To waitlist time-off requests, select the check box.
   b. To auto scan waitlisted request, select the check box.
   c. If needed, change the waitlist sort priorities.
5. If you want to create daily allocations, do the following:
   a. In the **Allocation Type** section, no action is needed. Daily allocations is the default.
   b. Under **Enter Allocated Time Off hours into the calendar** section, do the following:
      - Optional: Change the default month and year.
      - When time-off is allowed, type the number of time-off hours that you want to allocate. Repeat until your are finished.
      - Click **Save**.

      Now the options to import allocations are available.
6. If you want to create interval allocations, do the following:
   a. Under the **Allocation Type** section, click **Interval Allocations**.
   b. For each day of the month, do one of the following:
      - When time-off is allowed, allocate interval hours for the day using one of the two methods:
        - In the space under a date row, place your pointer at the start time and drag it to the end time. View the interval on **Create Interval** window. Click **Set**. Repeat as needed for other intervals.
        - Click **Create Interval**, and enter the interval allocation on the **Create Interval** window. Click **Set**. Repeat as needed for other intervals.
      - Click **Save**.

      Now the options to import allocations is available.

Time-Off Pool page for managing time-off pools

Use this page to manage time-off pools. You can access the time-off pool form to create a time-off pool or edit an existing pool, view a time-off pool, and delete a time-off pool.

Column	Description
Time Off Pool	Name of the time-off pool
Description	Optional: Description of time-off pool.
Owner Organization	Name of the organization that created the time-off pool.

Related topics

Create a time-off pool (page 86)
Delete a time-off pool (page 91)
Time-Off Pools page (page 88)

Time-Off Pools page

Use time-off pools to manage the amount of time that employees can take off in a specific time period.

Field	Description
Time Off Pools Details section	
Organization Name	Read only.
Name	Name of time-off pool.
Description	Optional: Description of time-off pool.
Time Off Waitlist section	
Enable waitlists	When selected, turns on waitlists for the time off pool. Pending or denied time off requests can be manually added to the waitlist.
Allow denied requests to be added to waitlist	Determines whether employees have the option to manually add eligible, denied requests to the Waitlist. • When selected, the Add to Waitlist action icon is available for these requests (on My Requests page). • When clear, the Add to Waitlist action icon is not available. NOTE| This setting does not affect whether the Add to Waitlist action icon is available on the Employee Requests page.

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Enable auto scan of waitlisted requests	When selected, waitlisted requests scans are triggered when one of the following events that cause changes in the organization's time-off pool allocated hours or employee time-off hours occur. • A change to the time-off pool for an organization. • An employee withdraws an approved time-off event. • A Special Day of Time Off Not Allowed is created or deleted for a date. • A change in the approved allocation hours of the approved time-off after the schedule has been published. • Any changes such as an update, addition, deletion, enabling/disabling auto-processing or auto-filing, or validation rules for time-off. (Including similar actions for the parent organization's time-off pool or organizations sharing the time-off pool allocation hours. After a waitlist scan has been triggered, the waitlisted requests are filtered and sorted according to the date range and the organizations affected by the triggering event. Then, the auto-processing engine sequentially processes these filtered and sorted waitlisted requests for approval or denial.

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Waitlist sort priorities	Available when **Enable waitlists** is selected. Identifies the sort order priority for waitlists. Up to three different columns are available for sorting the waitlist requests for processing. By default, the first priority (column) is set to sort by Seniority in Ascending order. This priority can be changed, and two other priorities can be defined. The priorities include the following: • **Seniority**: Sorts by seniority date (by how long employees have worked for their organizations). To sort by the employees who have worked the longest for their organizations, sort this priority type in *Ascending* order. • **Rank**: Sorts by employee rank. In your organization, if 1 indicates the *highest* rank, sort in *Ascending* order. If 1 indicates the *lowest* rank, sort in *Descending* order. • **Submitted**: Sorts by the date the request was submitted. To sort by the earliest submitted date, sort this priority type in *Ascending* order. • **Days on Waitlist**: Sorts by the number of days the request has been on the waitlist (1 day, 2 days, 3 days). To sort by the longest amount of time (in days) that the request has been on the waitlist, sort this priority type in *Descending* order. • **Time on Waitlist**: Sorts by the total amount of time on the waitlist (1 hour, 2 hours, 3 hours). To sort by the longest amount of time (in hours) that the request has been on the waitlist, sort this priority type in *Descending* order. • **Length**: Sorts by the length of the request. To sort by the longest request, sort this priority type in *Descending* order. • **Hours Accounted**: Sorts by the number of hours accounted for the time-off request. To sort by the greatest number of hours accounted for by the request, sort this priority type in *Descending* order.
Allocation Type section	
(*drop down list*)	List includes the following options: • **Daily Allocations** (default): Time-off allocation hours are for an entire day. • **Interval Allocations**: Time-off allocation hours are for periods smaller than a day. By default, each day is populated with a 24-hour interval with zero hour allocated for time-off. Interval allocations can be as short as 15 minutes or as long as 24 hours.

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
(*calendar*)	Based on the selected allocation type, a monthly calendar is displayed for entering the allocation hours. • **Daily Allocations** (default): Calendar is in the traditional table format with a box for each day in the month. In each box, there is a text box for typing the allocation hours. • **Interval Allocations**: Calendar is a non-traditional table format. The first column lists each day of the month. The remaining columns show each of the 24 hours in a day. When an interval time-off period has been configured for a time-off pool, it is listed in the row for that date and under the appropriate time column for the period start and end time. Three values, separated by commas, are shown in the following sequence: ▪ 1 Hours Allocated ▪ 2 Hours Pending ▪ 3 Schedule Time Off

Delete a time-off pool (page 91)
Time-Off Pool page for managing time-off pools (page 88)

Delete a time-off pool

If a time-off pool is no longer needed, you can delete it. Employees who are assigned to the deleted pool need to be assigned to another pool. Otherwise, requests from these employees are not processed correctly or not processed as you intended.

Example: An employee's default time-off pool is deleted

Requests with hours for a time-off type that deducts from the default time-off pool violate the following time-off validation rule:

Time Off Pool has available time-off hours.

Example: An employee's default time-off pool is unchanged, but the time-off pool assigned to a time-off type is deleted

The pool for the time-off type reverts to the default time-off pool. Requests with hours for this time-off type are deducted from the default time-off pool.

Before you begin

Create a time-off pool (page 86)

Confidential and Proprietary Information of Verint Systems Inc.

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Time Off Pools**.
2. Identify the time-off pool that you want to delete.
3. In the left pane, click the owner organization.
4. In the right pane, click the time-off pool.
5. Click **Delete**.

Edit interval allocation hours for a time-off pool

When you need to change the time range or number of allocated hours for an interval, you can edit it.

Before you begin

Create a time-off pool (page 86)

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Time Off Pools**.
2. In the left panel, click an organization.
3. In the Time Off Pools list, click a time-off pool and click **Edit**.
4. Under **Allocation Type**, click Interval Allocations.
5. Optional: Using the date selector, change the default month.
6. Locate the interval, and double-click the number (allocated hours).
7. Do the following as needed:
   a. To change the interval start and end times, either type over the time or use the time range selector.
   b. Type the number of hours.
8. Click **Set**.
9. Click **Save**.

Interval window

From this window, you can create, edit, and delete interval allocation hours. When these hours are defined, employees can request time off for periods less than a day.

Field	Description
Date	Date of the interval. When you edit an interval, this field is not available.
Interval	Beginning and ending time of the interval. Both times must occur in the same 24-hour day.
Hours	Number of hours allocated for time off during this interval. Valid values: • Whole numbers (0, 1, 2, 3,...) • Decimal numbers (.5, 1.75, 2.0...)

Related topics

Edit interval allocation hours for a time-off pool (page 92)

Import time-off allocations

To save time when you have numerous time-off allocations to enter, you can import them using a text file. When you want to create, edit, or delete individual time-off allocations, you can do it manually.

Before you begin

- Create a time-off pool (page 86)
- Allocation hours import file (page 95)

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Time Off Pools**.
2. In the left panel, click an organization.
3. In the Time Off Pools list, click a time-off pool and click **Import**.
4. Complete the **Allocated Time Off** window, and click **Import**.
5. Review the import results.
6. If there are errors, update the import file and repeat Step 4 through Step 6.
7. If needed, make other changes to the time-off pool
8. Click **Save**.

Allocation hours import file

When you have numerous daily or interval time-off hours to define, you can import them using a text file.

When you want to create, edit, or delete a few interval hours, you can do it manually.

Import file format

- Use a column delimiter such as tab, comma, or semicolon.
- Start each date on a new line.
- Convert other file formats such as Microsoft Excel to text files before importing them.
- To import daily allocations, create the text (.txt) file using the following format:

  <date> <hours>

  Where <date> specifies the month, day, and year in your regional format.

  Where <hours> specifies the number of allocated time-off hours.
- To import interval allocations, create the text (.txt) file using the following format:

  <date> <hours> <start time> <end time>

  Where <date> specifies the month, day, and year in your regional format.

  Where <hours> specifies the allocated time-off.

  Where <start time> and <end time> have a 15-minute format (0, 15, 30, 45).

  These two times form an inclusive range.

Error handling

- If there are syntax errors, they are ignored silently (that is, no error messages are displayed).
- Interval allocations only
  - Duplicate rows are not imported.
  - Intervals not in 15-minutes increments are not imported.
  - The End Time must be larger than the Start Time.

Example: Daily allocation hours

The following example use the regional formats for the United States, where the date is in the format mm/dd/yyyy.

Date	Hours
01/10/2003	50.5
01/11/2003	55

Confidential and Proprietary Information of Verint Systems Inc.

Using German regional format (dd.mm.yyyy), the lines would be:

Date	Hours
10.01.2003	50.5
11.01.2003	55

Example: Interval allocation hours

This example shows an import file for an entire day.

Date	Hours	Start Time	End Time
11/30/2017	0	0:00	0:30
11/30/2017	1	0:30	1:00
11/30/2017	2	1:00	1:30

Assign employees to a time-off pool and allocate time-off hours

Assign a time-off pool and allocate time-off hours to any employee in an organization with time-off types (activities) that are set up to deduct from a time-off pool.

The time off calendar shows scheduled hours regardless of whether the time off event was requested through Request Management or added to the scheduling calendar.

Optional: Assign a separate time-off pool for a time-off type

Time Off Type (activities) have a Time Off Pool list. By default, the selected employee time-off pool is assigned to these time-off types. If you want a time-off type to be counted against a different time-off pool, you can assign another pool.

Before you begin

Create a time-off pool (page 86)

Procedure

1. Go to **User Management**. Under **Employees**, select **Time Off**.
2. In the left pane, select one or more employees.
3. Under the **Time Off Pool** section, click the pencil (Edit icon).
4. From the **Effective Dates** dialog box, do the following:
   a. Click an effective date option.
   b. Click a time-off pool.
   c. Click **Set**.
5. Optional: To assign a different time-off pool to a time-off type for the selected employees, do the following:
   a. Under the **Time Off Type** section, in a Time Off Pool list, click a different time-off pool.
      The **Edit** icon (a pencil) is displayed.
   b. Optional. To revert this update back to the default pool, click the **Revert** icon .

      > If there are existing associated requests with this pool, when you revert back to the default time-off pool after making a change and click **Save**, the requests are impacted by the default time off pool.

   c. Optional: To change the effective dates, click the Edit icon (pencil). From the **Effective Dates** dialog box, click an effective date option, and click **Set**.
   d. Click **Save**.
      The **Edit** icon is displayed going forward.
6. To allocate time-off hours, in the text boxes, type the number of time-off hours allotted for each time-off activity or activity type.

Organization Activity Details (*Workforce Management Administration Guide*)

Time-Off page

Use the **Time-Off** page to assign time off pools, set time-off allocation hours, and assign a reference schedule to employees.

Employee Selection pane

Lists the available employees.

Workspace Date selector

Changes the time-off information displayed. The default date is your current month, day, and year.

Time-Off Pool section

- **First box**: Lists the time-off pools available for assignment. Only time-off pools defined at the employee's organization and its parent organizations are available for selection.

  A time-off pool must be assigned to any employee in an organization with time-off activities set up to deduct from a time-off pool.

  The employee's current time-off pool is available for selection regardless of which organization the time-off pool was created in. The current time-off pool is available even if it was not created in the employee's current organization or its parent organizations.
- **Second and third boxes**: Display the time-off pool effective dates.

Time-Off Type section

Each row in the table represents a “time off” type of activity and related information. If multiple employees are selected, only the fields in common are displayed. Where information varies, asterisks are displayed in the field.

Column	Description
Time-Off Type	Lists time-off types (activities) defined for the organization.

Confidential and Proprietary Information of Verint Systems Inc.

Column	Description
Time-Off Pool	If a list is available, a different time-off pool can be selected for the time-off type (activity). By default, the employee's time-off pool is selected for each time off type. A list is available when the time-off type (activity) was created with either of the following settings selected: • Deduct from Daily Pool • Deduct from Interval Pool The other time-off pools have the same effective date options as the employee's time-off pool. If the employee's time-off pool is changed for the activity, the activity time-off pool has its own effective dates regardless of which time-off pool is selected. The effective dates for the activity time-off pool are independent of the employee main time-off pool afterward. The effective dates remain independent even when the following occurs: • The time-off pool for the activity is changed back to the original employee time-off pool. • The employee's time-off pool changes.
Default Per Day	When the request or time off calendar event is for a single day, this value is the number of hours that are debited for a calendar day.
Default Per Week	When the request or time off calendar event spans multiple days, this value is the maximum number of hours that can be debited during a seven-day period.
Accrual Schedule	If the time-off type (activity) was created with **Time Off With Accrual** selected, the accrual schedule is listed. The remaining columns have text boxes for typing the values.
Balance	Balance of time-off hours for the specified employee, which is effective from the date displayed in **Date Last Updated**.
Date Last Updated	Date from which the time-off balance is effective. For example, the **Balance** is 40.00 and the **Date Last Updated** is 01/01/2024. Therefore, *from* 01/01/2024, the time-off balance for the specified employee is 40.00. To view a history of time-off balance updates, select the pencil icon next to the **Date Last Updated** field.
Maximum Balance	Maximum number of hours an employee can accrue.
Maximum Carryover	Maximum number of hours that can be carried over based on the accrual schedule. (Time-off balances are carried over automatically.)
Accrual Rate	Text box for typing the accrual rate for the accrual schedule. Example: If the Accrual Schedule for this activity is a year, four years are available for entering the accrual rate.

Confidential and Proprietary Information of Verint Systems Inc.

Reference Schedule section

Field	Description
(*first box*)	Provides a list of reference schedules that can be assigned. A reference schedule must be assigned to any employee that belongs to an organization with any time-off activities that deduct from an Interval Time Off Pool. The reference schedule is used when an employee submits a time-off request for a period outside a published schedule. The reference schedule determines which intervals are affected by the request. A reference schedule is available for selection when it is a past, present, or future published single week schedule assigned to the employee.
(*second box*)	Displays the start date that the reference schedule is effective.
(*third box*)	Displays the end date that the reference schedule is effective (when applicable)

Time-Off page (page 100)
View history of time-off balances (page 103)
Time off accrual carryover (page 103)

View history of time-off balances

View a history of time off balance updates for a selected employee. For each employee, view the balance of their time-off hours, the date from which that balance was effective, and date their current time-off hours balance was updated.

Procedure

1. Using the date range selector at the top of the screen, enter the date range of effective dates for past time-off balances.

   For example, to view a history of time-off balances for an employee that were effective from January 1, 2024 to June 15, 2024, enter 01/01/2024-06/15/2024 as the date range.
2. View the following historical information:
   - **Employee Name**: Name of the employee for whom the time-off balance information is relevant.
   - **Balance**: Balance of time-off hours for the specified employee.
   - **Date Updated**: Date from which the balance of time-off hours was effective. For example, if the **Balance** is 75.00 and the **Date Updated** is 05/14/2024, the employee had a time-off hours balance of 75 hours from May 14, 2024.
   - **Date Modified**: Date the current time-off hours balance for the specified employee was updated. This value is the date the balance for the employee was updated on the **Time Off** page in the **User Management** module under **Employees**.
3. Determine the next step:
   a. To delete a time-off balance row, select the row and select **Delete**.
   b. To close the window, select **Done** or **Close**.

Assign employees to a time-off pool and allocate time-off hours (page 99)
Time-Off page (page 100)
Effective Dates window: Time-Off Pool (page 102)
Time off accrual carryover (page 103)

Time off accrual carryover

Time Off Accrual is designed to work with the customer payroll system. The **Balance** and **Date Last Updated** fields on the **Time Off** page for a specific employee are periodically updated from the payroll system. This page is located on **User Management**, under **Employees**.

Specifically, it assumes that there is a starting balance and a date last updated to seed the time-off accrual calculations. When these values are in place, the time-off accrual logic works.

Confidential and Proprietary Information of Verint Systems Inc.

Automatically, time off balances carry over into the future in our system. Therefore, you do *not* need to complete any box on the **Time Off** page to enable carryover of accrued hours. This page is on **User Management**, under **Employees**.

To *limit* the hours employees can accrue in total, or *limit* the maximum hours carried over, set the values in **Maximum Balance** and **Maximum Carryover**. Otherwise, employees are able to accrue an unlimited number of hours, and carry over an unlimited number of time-off hours from year to year.

After you define these fields, the system starts its time-off calculations as of the **Date Last Updated**. The system updates this balance based on accruals and time-off days taken by the employee.

If the **Balance** and **Date Last Updated** fields are *not* set, there is *no* starting point from which to accrue and carry over time-off balances. When no last updated balance is available, the system restarts its calculations over from the start date of each year. It assumes that the starting balance is 0 (zero).

Therefore, the carryover logic only works correctly if you have defined values for the **Balance** and **Date Last Updated** fields. These values are fed in from your payroll system, but can also be entered manually from the WFM UI. If these values are taken as described, the carryover logic works properly.

Add a reference schedule for one or more employees

A reference schedule is either a past, present, or future one-week schedule period that represents a typical work week for an employee. Select a reference schedule for the employees in an organization when you want requests outside a published scheduled to use the reference schedule instead of default hours.

Requests for activities using interval allocations in a time off pool require either a published schedule or a reference schedule to determine the time frame for available hours. If you use an interval time off pool for *future* activities that occur when the employee does not have a published schedule, you must select a reference schedule for the employees in that organization.

Recalculation of time-off requests applies to daily defaults

When a time-off request has been approved in a period with unpublished shifts, and the accounted hours are calculated from the default daily hours, a change in scheduling, employee daily defaults, or other factors might trigger a recalculation of the accounted hours for the request.

If the newly calculated hours differ from the original calculated hours, the system attempts to retain the original total hours by adding or subtracting hours from the request, starting with the last day in the request. This adjustment, or recalculation, is only made for requests or events that use daily defaults.

This adjustment is *not* made for requests or events that calculate accounted hours using reference schedules. Instead, the latest calculated hours are used. In addition, the recalculation only applies to events in an unpublished scheduling period when the **Time Off Hours** type is set to **Use my time off hours to schedule my absence**.

Procedure

1. Go to **User Management**. Under **Employees**, select **Time Off**.
2. In the selection and filter panel on the left, select one or more employees.
3. In the workspace, under the **Reference Schedule** section, select the **pencil** icon.
4. On the **Effective Dates** window, select the effective dates, and select the **Reference Schedule** icon.
5. On the **Scheduling Period Selector** window, select a campaign and a schedule period.
6. Select **Set**.

   The Time Off page is displayed with the selected reference schedule. When multiple employees were selected and have the same schedule period, the value is displayed. When the schedule period is not the same for all selected employees, a series of asterisks are displayed in the **Start Date** box.
7. Select **Save**.

Delete a reference schedule for one or more employees

When you have assigned a reference schedule to an employee and no longer want it to be used, you can delete it. Afterward, the daily and weekly time off defaults are used to calculate time-off hours.

Resolving errors

Reference schedules cannot be deleted when any selected employee has pending or approved requests for an unpublished period that uses an interval allocations time off pool. When this issue occurs, an error message provides the name of the employee and one request choice or calendar event that uses the reference schedule.

Your administrator can use the information in the error message to identify the activity that is preventing the removal of the reference schedule assignment. Then, the administrator can temporarily change the time off activity to use a daily time off pool.

Example: Multiple employees selected

If five employees are selected and two employees have references schedules that cannot be deleted, the reference schedule is not deleted for any of the employees. The error message provides information about the two employees. When there are no errors for any of the selected employees, the reference schedule assignment can be deleted.

Before you begin

Add a reference schedule for one or more employees (page 105)

Procedure

1. Go to **User Management**. Under **Employees**, select **Time Off**.
2. In the selection and filter panel on the left, select one or more employees.
3. In the workspace, under the **Reference Schedule** section, select the **trash can** icon.
4. Select **Save**.

Chapter 4

Setting up flex time requests

A flex time request allows employees to ask for both time-off and *make up* time instead of having the time off deducted from their time-off accrual.

Topics

Recommended workflow: Set up flex time requests 109

Define settings for flex time requests 110

Create policies for flex time requests 112

Define validation rules for flex time requests 113

Create a filing rule for flex time requests 118

Create an autoprocessing rule for flex time requests 120

Recommended workflow: Set up flex time requests

A flex time request allows employees to ask for both time-off and *make up* time instead of having the time deducted from their time-off accrual. It is used for published schedules and gives employees the opportunity to request last minute changes.

This workflow shows the process for setting up flex time requests and using all system features. Follow the procedures that fit the need of your organization.

Workflow

1. Define settings shared by all request types (page 24)

   While most Request Management settings are specific to one type of request, several optional settings are effective for all request types.
2. Define settings for flex time requests (page 110)

   Flex time settings determine when employees can make up their time, whether flex time-off is limited to the beginning of a shift block, and whether employees can submit consecutive flex time requests.
3. Create policies for flex time requests (page 112)

   Flex time request policies provide guidance to employees about submitting requests. Employees can view all request policies on the Policies page (on the My Requests menu).
4. Define validation rules for flex time requests (page 113)

   Flex time validation rules verify that these requests meet the conditions that you specify. The validation rules that you set for a request type are available as criteria for auto-processing rules.
5. Create a filing rule for flex time requests (page 118)

   You can create a filing rule to specify when flex time requests must be submitted. When flex time requests are submitted, a validation rule verifies that the requests comply with the filing rule.
6. Create an autoprocessing rule for flex time requests (page 120)

   While flex time requests can be processed manually, you can set up a rule for the system to process them automatically. An auto-processing rule can be used to approve and deny requests that violate flex time request validation rules.

Confidential and Proprietary Information of Verint Systems Inc.

Define settings for flex time requests

Flex time settings determine when employees can make up their time, whether flex time-off is limited to the beginning of a shift block, and whether employees can submit consecutive flex time requests.

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Settings**.
2. From the **Organization Name** pane, click an organization.
3. Under the **Flex Time** section, complete the settings that you want to use.
4. To save these settings, do one of the following:
   - Click **Save and apply to sub-orgs**.
   - Click **Save**.

Related topics

Flex time settings (page 110)

Flex time settings

Flex time settings define options and set requirements in flex time requests submitted by employees in an organization.

Location

Go to **Organization Management**. Under **Request Management**, select **Settings**. The settings are available when flex time is selected.

Settings

Setting	Description
Allow make-up extensions before shift	Employees can make up flex time off *before* a scheduled shift.
Allow makeup extensions after shift	Employees can make up flex time off *after* a scheduled shift.
Allow makeup extensions in shift gaps	Employees can make up flex time off during available gaps that occur during a scheduled shift. Available gaps include both shift/overtime gaps and custom shift gap activities. A custom gap activity is an activity with the **Allow Extensions** field set to **Yes, treat as a shift gap**. (This field is located on the **Activity Details** page, under the **Request Management Usage** section.)

Confidential and Proprietary Information of Verint Systems Inc.

Setting	Description
Allow makeup extensions in adjustable breaks	Employees can make up flex time off in adjustable breaks that occur during a scheduled shift. An adjustable break is an activity with the **Allow Extensions** field set to **Yes, treat as an adjustable break**. (This field is located on the **Activity Details** page, under the **Request Management Usage** section.)
Allow makeup extensions on a non-working day	When this setting is selected, employees can request to make-up flex time on a non-working day (on the request form under the **Flex Make-up** section). When a non-working day is selected, the following occurs: • Under **Shift**, the **Name** field displays **Non-working day**. All other fields are available and must be completed. • Under **Flex Makeup**, all fields are unavailable. If the request is approved, a custom shift is created for the employee using the selected activity, start time, and duration. This shift is added to the count of shifts for the employee. To ensure that make-up on a non-working day does not allow employees to get too many shifts, the following flex time validation rule can be used: Maximum consecutive working days allowed as per organization settings.
Limit time off request to beginning of shift blocks	An employee can only request flex time off at the beginning of each shift block.
Allow consecutive flex time off requests	Employees can make consecutive flex time off requests during a scheduled shift.

Define validation rules for flex time requests

Flex time validation rules verify that these requests meet the conditions that you specify. The validation rules that you set for a request type are available as criteria for auto-processing rules.

Each validation rule has an icon. When a request violates a validation rule, alert information is available on the following:

- Employee Requests page: An alert icon is displayed. When you point to the icon, information about the validation rule violation is displayed.
- The request details: The alert icon and information about the validation rule violation are on the details view.

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Validation**.
2. In the left pane, select an organization.
3. Under the **Flex Time Requests Validation rules** section, define the validation rules that you want to use.
   a. Select the check box.
   b. When needed, complete the rule values (Example: number of minutes, hours, or days).
4. Do one of the following:
   - Click **Save**.
   - Click **Save and Apply to Sub-Orgs**.

Related topics

Flex time request validation rules (page 113)

Recommended workflow: Set up flex time requests (page 109)

Flex time request validation rules

Use any of these validation rules to check flex time requests.

- **Maximum duration of Flex Time Request:** <*number*> <**Minutes** or **Hours**>**.** This rule is violated if the flex time-off duration, and any consecutive requests enabled for Flex Time, is equal to a value that is greater than the specified maximum duration.
- **Minimum duration of Flex Time Request:** <*number*> <**Minutes** or **Hours**>**.** This rule is violated if the total flex time duration is less than the specified minimum.
- **Maximum number of makeup blocks per request:** <*number*>**.** This rule is violated if the total number of flex time makeup blocks is greater than the specified maximum.
- **Maximum number of Flex Time Requests:** <*number*> <**Month** or **Quarter**>**.** This rule is violated if the total flex time requests are greater than the specified maximum. When this rule is selected for an employee's organization, the Flex Time Summary section is available on the following pages:

Confidential and Proprietary Information of Verint Systems Inc.

  - **Time Summary**: This page is located on **Tracking**, under **Time Summary**.
  - **My Schedule Summary**: This page is located on **My Home**, under **My Schedule**.

- **Minimum duration of the activity** < *adjustable break activity or shift gap activity*> **is** <*number*> <**Minutes** or **Hours**> **after a make-up extension during the activity**. This rule is violated if the minimum duration of the selected activity will not be met after an extension during the activity. (Until shift event activities are created for adjustable breaks or shift gaps, the list of activities is empty.) Example - adjustable break activity: Employees get a 60 minute, unpaid lunch break for a shift that exceeds six hours. By law, they are required to take 30 minutes for lunch. You can define this rule with a minimum activity duration of 30 minutes to prevent employees from making their lunch break too short.

  Two break segments can occur due to a gap--one segment before and one segment after the work extension. Only one of these break segments must meet the minimum duration requirement in this rule.

  If you are defining this rule for multiple activities with the same duration, you can select all applicable activities and enter the duration once. If you are defining this rule for activities with different durations, define each activity separately. Also, you can save or cancel all activities at one time instead of processing them individually. By default, the first adjustable break activity or shift gap activity shows in the list box.

  To remove a minimum duration for an activity, set the duration to *blank* and save the change.

- **Makeup must occur** <time period option>. This rule is violated when the requested make-up time does not occur in the selected time period. Time period options are:

  - **as soon as possible and no later than a specific number of days** <number of days>
    Make-up time must be made up in the next gap, shift start, or shift end--whichever one comes first.

    Employees can use an adjustable break to make up time, but it is not included in this validation.

    Examples:

    - If an employee requests time off at the beginning of a shift and the shift has a gap, then all or part of the make-up time must occur during the gap.
    - If an employee requests time off at the end of a shift, then the make-up time must occur before the next shift.

  - **in the same organization week**
    Make-up time must start and end within the same organization week as the time off.

    The organization week is based on **Week Start Day** defined on the Organization Settings page (under Hierarchies Organization Management, then Hierarchies).

  - **in the same scheduling period**
    Make-up time must start and end within the same scheduling period as the time off.

    The scheduling period is based on the scheduling periods listed on the Campaigns Settings page (under Forecasting and Scheduling then Campaigns).

  - **in the same pay period**
    Make-up time must start and end within the same pay period as the time off.

Confidential and Proprietary Information of Verint Systems Inc.

The pay period is based on two Required Pay Period Hours settings, **Pay Period** and **Start Date**, defined on the Request Management Settings page (under Organization Management then Request Management).

> For the organization week, scheduling period, and pay period options: When the time off crosses periods due to the shift assignment crossing periods, then the entire time off is attributed to the first period. Therefore, the make-up time must start and end in the same first period.

- **Makeup must occur as soon as possible and no later than** <*number*> **days.** This rule is violated if earlier suitable flex makeup times occur before the proposed flex makeup time (excludes flex time with adjustable breaks).
- **Scheduled calendar event activities that time off must avoid** <**All** or specific calendar event>**.** This rule is violated if the flex time request falls within a calendar event activity which must be avoided.
- **Request complies with filing rules.** This rule is violated if the request submittal date violates at least one of the filing rules applicable to the employee's organization
- **Makeup time complies with the organization hours of operation.** This rule is violated if the flex makeup time specified in the flex time request does not fall within the hours of operation for the organization.
- **Maximum consecutive working days allowed as per organization settings.** This rule is violated if the requested flex makeup time on a non-working day causes the employee to exceed the maximum number of shifts defined in the **Maximum consecutive working days to schedule** organization setting. (This setting is located on the Organization Settings page, under Scheduler Options.)
- **Minimum required time gap between consecutive shifts as per organization settings.** This rule is violated if consecutive shifts including the makeup shift are scheduled closer than the minimum time required between consecutive shifts.

Confidential and Proprietary Information of Verint Systems Inc.

- **Maximum paid duration allowed:** <*number*> **minutes per** <**Organization Day**> or **24 Hour Period**>**.** This rule is violated if the request causes the paid duration to exceed the user-defined duration allowed for the selected period. Shift length is not considered; however, all paid hours during the selected period are considered. For the paid duration calculation, only paid hours are counted. Shift work (normal shifts, overtime, overtime extension) and time off are counted as paid hours. Flex time off segments are not counted as paid hours.

  For the reference period that defines the day, select from the following options:

  - **Organization Day**: If all employees only have shifts that start and end in the organization day boundary, use this option.
    During validation, the duration calculation uses the time period defined for the organization day. The organization day is defined on the Organization Setting page (located on the Organization Management menu, under Hierarchies). If the maximum paid duration threshold is exceeded, an alert is generated.
  - **24 Hour Period**: If any employees have shifts that cross the organization day boundary (shift starts on one day and ends on another day), use this option.
    During validation, the duration calculation uses a sliding 24-hour window that increments by 15 minutes. The sliding window begins 24 hours + 15 minutes before the request start time and stops at 24 hours - 15 minutes after the request end time. If the maximum paid duration threshold is exceeded in a 24-hour window, the rule is violated. No more 24-hour windows are checked, and an alert is generated.

- **Minimum paid duration allowed:** <*number*> **minutes per** <**Organization Day** or **24 Hour Period**>**.** This rule is violated if the request for a makeup extension on a nonworking day causes the employee to fall under the user-defined duration allowed for the selected period. Shift length is not considered; however, all paid activities during the selected period are considered. For the paid duration calculation, only paid hours are counted. Shift work (normal shifts, overtime, overtime extension) and time off are counted as paid hours. Flex time off segments are not counted as paid hours.

  For the reference period that defines the day, select from the following options:

  - **Organization Day**: If all employees only have shifts that start and end in the organization day boundary, use this option.
    During validation, the duration calculation uses the time period defined for the organization day. The organization day is defined on the Organization Setting page (located on the Organization Management menu, under Hierarchies). If the minimum paid threshold is not met, an alert is generated.
  - **24 Hour Period**: If any employees have shifts that cross the organization day boundary (shift starts on one day and ends on another day), use this option.

    During validation, the duration calculation uses a sliding 24-hour window that increments by 15 minutes. The sliding window begins 24 hours + 15 minutes before the request start time and stops at 24 hours - 15 minutes after the request end time. If the minimum paid duration threshold is not met after checking all windows, an alert is generated.

- **A minimum of** <*x*>**percent of changed intervals improves net staffing based on all queues that the employee is** <eligible to work or assigned to work> **for the request duration**. This rule is violated when the percentage of queue intervals that will be changed by the request is less than the

Confidential and Proprietary Information of Verint Systems Inc.

specified minimum percentage for net staffing improvement in the queues. Both the time off portion and each make up portion of the request are evaluated. When any portion of the request fails validation, an alert is displayed for the request. The alert specifies which portion failed validation: the time off portion or any of the make up portions.

The minimum staffing level percentage is calculated as follows:

Improvement Percentage = (#periods where net staffing is improved / (#periods where net staffing is improved + #periods where net staffing is worsened))*100

Create a filing rule for flex time requests

You can create a filing rule to specify when flex time requests must be submitted. When flex time requests are submitted, a validation rule verifies that the requests comply with the filing rule.

After a rule has been created for an organization, you can copy it to another organization to save time. The **copy to** organization becomes an owner organization of the rule too (as if the rule was created by the organization).

> If the following flex time request validation rule is not selected, the filing rule is not effective:
>
> Request complies with filing rules.

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Filing Rules**.
2. In the left pane, click an organization.
3. Click **Create New Rule**.
4. Click **Flex Time**.
5. In the **Filing Rules** workspace, complete the settings.
6. Click **Save**.

Related topics

Confidential and Proprietary Information of Verint Systems Inc.

Flex time request filing rule settings

Use these settings to create a filing rule for flex time requests.

Location:

On the **Filing Rules** page when the selected request type is Flex Time. This page is located on **Organization Management**, under **Request Management**.

Settings

Field	Description

Flex time requests affected by the rule you are creating	Three settings determine which requests are affected by this rule.
	• Time off type list: Specifies time-off requests for this time off type (activity) are affected.
	• Specifies whether the rule affects requests for flex time before or after the makeup time.
	• Specifies which requests of the selected time off type are affected:
	  ▪ All requests of this type (default setting)
	  ▪ For (limited to requests submitted for a weekend, specific day of the week, or working holiday)
	  ▪ For (limited to requests submitted for a specific date and time range)

Request must be filed	Controls whether a request can be made for dates that occur in the future or the past and specifies the time period for the requested dates: • If you want to allow requests for future dates and want to limit the time period of the requested future dates, then create an *in advance* rule that specifies the time period the request dates must occur in. • If you want to allow requests for past dates and want to limit the time period of the requested past dates, then create an *in the past* rule that specifies the time period the request dates must occur in. • If you do not want to allow requests for any dates in the past, then create an *in the past* rule and specify zero days.
Apply to sub-orgs	Specifies whether this rule applies only to the organization or to the organization and its suborganizations.

Related topics

Create a filing rule for flex time requests (page 118)

Create an autoprocessing rule for flex time requests

While flex time requests can be processed manually, you can set up a rule for the system to process them automatically. An auto-processing rule can be used to approve and deny requests that violate flex time request validation rules.

After an autoprocessing rule has been created for an organization, you can copy it to another organization to save time. The **copy to** organization becomes an owner organization of the rule too (as if the rule was created by the organization).

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Autoprocessing**.
2. In the left pane, click an organization.
3. On the **Autoprocessing** list page, click **Create New Rule**.
4. On the **Create New Autoprocessing Rule** popup, click **Flex Time**.

   The **Autoprocessing** rule form is displayed.
5. Optional: Under **Apply to sub-orgs**, click another option.
6. Under **Flex Time Requests affected by this rule**, click one of the options.
7. Under **Autoprocessing Criteria**, do the following to set up auto-processing criteria for approval and denial:

   a. Based on the autoprocessing action you want to define, select one of the following check boxes:

      - **Approval Criteria**
      - **Denial Criteria**

   b. Click one of the auto-processing options.

   c. If you selected the option that requires validation rules for the auto-processing criteria, select one or more of the rules shown in **bold**. This convention indicates which validations rules are configured for this organization. If you select any other rules, they are ignored.

   d. Repeat these steps until you have completed the autoprocessing criteria for all actions that you want to use for this request type.
8. Click **Save**.

Flex time request autoprocessing settings

Autoprocessing rule settings define whether the rule applies to suborganizations, which flex time requests are affected, and the auto-processing criteria.

Location

On the **Autoprocessing** page when the Create New Autoprocessing Rule type is Flex Time. This page is located on **Organization Management**, under **Request Management**.

Apply to sub-orgs section

This section provides options to exclude or include suborganizations from this rule.

Field	Description
Apply to this org only	Rule applies only to the organization, and not to its suborganizations.
Apply to sub-orgs (no overrides)	Rule applies to the organization and its sub-organizations. The suborganizations cannot change the status of the rule or edit it.
Apply to sub-orgs (allow overrides)	Rule applies to the organization and its sub-organizations. The suborganizations can change the status of the rule, but cannot edit it.

Flex Time Requests affected by this rule

This section provides options to limit which requests are auto-processed.

Field	Description
Time off type	Rule applies only to requests with the selected time-off type (activity).
All requests of this type	All flex time requests are auto-processed for approval. No restrictions are applied.
For (specific day of the week, a weekend or working holiday)	Only requests submitted for the selected day of the week, a weekend, or a working holiday are auto-processed for approval.
For (date range)	Only flex time requests submitted for the specified date range are autoprocessed for approval.

Confidential and Proprietary Information of Verint Systems Inc.

Autoprocessing Criteria - Approval section

Use this section to select autoprocessing criteria for request approval. This section varies based on request type.

Field	Description
Approval Criteria	When selected, autoprocessing approves requests based on the selected criteria.
The following three auto-approve options are available.	
Do not auto approve any requests	No requests are automatically approved. All requests must be approved manually.
Approve requests with no violations	Only requests that do not violate any validation rules configured for this request type are auto-approved.
Approve requests violating only:	The following requests are auto-approved: • Requests that do not violate any validation rules configured for this request type. • Requests that only violate the validation rules selected for approval criteria.

Autoprocessing Criteria - Denial

Field	Description
Denial Criteria	When selected, auto-denial is used to process requests based on the selected criteria.
The following auto-deny options are available.	
Do not auto deny any requests.	No requests are automatically denied. All requests must be denied manually.
Deny requests with at least one violation.	Requests that violate *any* validation rules configured for this request type are automatically denied.
Deny requests violating:	Requests that violate the *selected* validation rules are automatically denied.

Chapter 5

Setting up shift bidding requests

Using an auction for shift bidding lets employees submit bids for the shifts they prefer.

Workforce Management not only automates Shift Bidding, but also introduces a higher degree of fairness in awarding shifts. The automated rules engine factors in seniority, rank, and unique tie-breaking bonus points, and assigns shifts accordingly.

Topics

Recommended workflow: Set up shift bidding requests 124

Define settings for shift bidding requests 125

Create policies for shift bidding requests 128

Define validation rules for shift bidding requests 129

Create a filing rule for shift bidding requests 131

Create an autoprocessing rule for shift bidding requests 132

Recommended workflow: Set up shift bidding requests

With shift bidding, employees can bid on the shifts that they prefer to work. You can factor in seniority, rank, and bonus points so certain employees are more likely to get their preferred shifts.

This workflow shows the process for setting up shift bidding requests and using all system features. Follow the procedures that fit the need of your organization.

Workflow

1. Define settings shared by all request types (page 24)

   While most Request Management settings are specific to one type of request, several optional settings are effective for all request types.
2. Define settings for shift bidding requests (page 125)

   Shift bidding request settings define options and requirements in the shift bidding requests submitted for all auctions in an organization. There are settings for shift preferences, maximum bids per employee, scoring factors, and bid options.
3. Create policies for shift bidding requests (page 128)

   Shift bidding request policies provide guidance to employees about submitting requests. Employees can view all request policies on the Policies page (on the My Request menu).
4. Define validation rules for shift bidding requests (page 129)

   Validation rules verify that shift bidding requests meet the conditions that you specify. The validation rules that you set for a request type are available as criteria for autoprocessing rules.
5. Create a filing rule for shift bidding requests (page 131)

   A filing rule specifies when shift bidding requests must be submitted for auctions in an organization (and optionally the sub-organizations).
6. Create an autoprocessing rule for shift bidding requests (page 132)

   While shift bidding requests can be processed manually, you can set up a rule for the system to process them automatically. An auto-processing rule approves and denies requests that violate the shift bidding validation rules.

Confidential and Proprietary Information of Verint Systems Inc.

Define settings for shift bidding requests

Shift bidding request settings define options and requirements in the shift bidding requests submitted for all auctions in an organization. There are settings for shift preferences, maximum bids per employee, scoring factors, and bid options.

Settings specific to a single auction are defined when the auction is created.

Procedure

1. Go to **Organization Management**. Under **Request Management**, select**Settings**.
2. From the **Organization Name** pane, click an organization.
3. Under the **Shift Bidding** section, complete the settings you want to use for this organization.
4. To save these settings, do one of the following:
   - Click **Save and apply to sub-orgs**.
   - Click **Save**.

Related topics

Shift bidding request settings (page 125)

Recommended workflow: Set up shift bidding requests (page 124)

Shift bidding request settings

Shift bidding request settings affect all shift bidding auctions created for an organization.

Location

On the **Settings** page under the Shift Bidding section. This page is located on **Organization Management**, under **Request Management**.

Settings

Setting	Description
Max Preference Value (1-Highest, Max-Lowest)	Specifies the maximum value that an employee can enter to indicate a shift bid preference. Example: If this setting is 25, employees can enter 25 for their least preferred shift. Preference numbers entered by employees help sort out multiple requests. When deciding on this value, consider the following: • How many bids you expect employees to submit. • Whether you plan to use the **Enforce unique preferences option**.

Confidential and Proprietary Information of Verint Systems Inc.

Setting	Description
Enforce unique preferences	If this check box is selected, duplicate preferences cannot be submitted. Requests with the status of Pending or Escalated are included in the duplicate check. Requests with the status of Withdrawn, Invalid, or Denied are excluded from the duplicate check. Example of the workflow: After entering and saving duplicate preference numbers, the user submits the request. An error message indicates that duplicate preference numbers exist and the preferences must be corrected before the request can be submitted.
Max Bids Per Employee	Determines the maximum number of bids an employee can submit in one scheduled auction (usually a week).
If enabled, the following scoring factors can be used in an auction: If you create a scheduled auction for a specific week, you can specify that the scoring factors are taking in to account when prioritizing shift bidding requests. If scoring is used in an auction, the score is calculated as follows: <Seniority Factor> * <number of months in the company> + <Rank factor> * <Max Rank - Employee Rank> + <Bonus factor> * <total accumulated and assigned bonus> If you do *not* want to use a particular factor in your scoring, set it to zero (0).	
Seniority scoring factor	Number of months the employee has been employed at the company. The value is a specific numeric value X the number of months in the company.
Rank scoring factor	Employee's rank in the company. The value is a specific numeric value X (maximum rank - employee rank).
Bonus points scoring factor	Employee's bonus points in the company. The value is a specific numeric value X the current number of bonus points.

Confidential and Proprietary Information of Verint Systems Inc.

Setting	Description
Bid Options	**Filter options by employee type**. If this check box is selected, the available bid option templates are based on the employee's employee type. (Example: When the employee type is full-time, only templates for full-time employees are listed.) Employee type is assigned in User Management when the employee's profile is created. • If you submit a bid for an employee, the **Bid Options** page lists only the templates available to the selected employee based on their employee type. This page is located on **Request Management**, under **Schedule Options**. • For employees: **My Bid Options** page lists only the templates available to them based on their employee type. This page is listed on **My Home**, under **My Requests**. **Display template description column**. When this check box is selected, a Description column is available. • The column is available on the **Schedules** page. This page is located on **Request Management**, under **Schedule Auctions**. For individual auctions, a maximum of 50 characters can be entered to provide additional information about a schedule template. • For employees: The column is available for view on the **My Bid Options** page. This page is located on **My Home**, under **My Requests**.

Define validation rules for shift bidding requests

Validation rules verify that shift bidding requests meet the conditions that you specify. The validation rules that you set for a request type are available as criteria for autoprocessing rules.

Each validation rule has an icon. When a request violates a validation rule, alert information is available on the following:

- Employee Requests page: An alert icon is displayed. When you point to the icon, information about the validation rule violation is displayed.
- The request details: The alert icon and information about the validation rule violation are on the details view.

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Validation**.
2. In the left pane, select an organization.
3. In the rule pane, under the **Shift Bidding Request Validation rules** section, do the following for each rule that you want to define:
   a. Select the check box.
   b. When needed, complete the rule values (Example: number of minutes, hours, or days).
4. Do one of the following:
   - Click **Save**.
   - Click **Save and Apply to Sub-Orgs**.

Related topics

Shift bidding request validation rules (page 129)

Recommended workflow: Set up shift bidding requests (page 124)

Shift bidding request validation rules

Use the shift validation rules to set conditions that you want validated in shift bidding requests.

- **Request complies with filing rules.** This rule is violated if the request submittal date violates any of the filing rules applicable to the employee's organization.
- **Employee's schedule complies with min/max hours, including overtime maximums.** This rule is violated if the requested schedule does not comply with the employee's min/max hours for the week of the auction including the maximum overtime allowed per day or week.
- **Employee has the same skills as required for the selected schedule.** This rule is violated if the employee does not have the same skills as the phantom employee the schedule was generated for. If an employee has more skills than required, this rule is violated.
- **Employee has sufficient skills for the selected schedule.** This rule is violated if the employee does not have some skills in common with the phantom employee the schedule was generated for.

Confidential and Proprietary Information of Verint Systems Inc.

- **Employee's schedule complies with organization hours of operation.** This rule is violated if any of the requested shifts in the shift bid fall outside the employee organization's hours of operation.

Create a filing rule for shift bidding requests

A filing rule specifies when shift bidding requests must be submitted for auctions in an organization (and optionally the sub-organizations).

After a rule has been created for an organization, you can copy it to another organization to save time. The **copy to** organization becomes an owner organization of the rule too (as if the rule was created by the organization).

> If the following Shift Bidding Request validation rule is not selected, the filing rule is not effective:
>
> Request complies with filing rules.

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Filing Rules**.
2. In the left pane, click an organization.
3. Click **Create New Rule**.
4. Click **Shift Bidding**.
5. In the **Filing Rules** workspace, complete the settings.
6. Click **Save**.

Related topics

Shift bidding request filing rule settings

Use these settings to specify when shift bidding requests must be submitted.

Location

On the **Filing Rules** page when the selected request type is Shift Bidding. This page is on **Organization Management**, under **Request Management**.

Settings

Field	Description
Request must be filed	Use to create a rule that requires bids be submitted in a specified time period before the auction deadline.
Apply to sub-orgs	Specifies whether this rule applies only to the organization or to the organization and its suborganizations.

Related topics

Create a filing rule for shift bidding requests (page 131)

Confidential and Proprietary Information of Verint Systems Inc.

Create an autoprocessing rule for shift bidding requests

While shift bidding requests can be processed manually, you can set up a rule for the system to process them automatically. An auto-processing rule approves and denies requests that violate the shift bidding validation rules.

If you plan to allow users to submit multiple shift bids, do not use auto-processing for bid approval.

After an autoprocessing rule has been created for an organization, you can copy it to another organization to save time. The **copy to** organization becomes an owner organization of the rule too (as if the rule was created by the organization).

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Autoprocessing**.
2. On the **Autoprocessing** list page, click **Create New Rule**.
3. On the **Create New Autoprocessing Rule** popup, click **Shift Bidding**.

   The **Autoprocessing** rule form is displayed.
4. Optional: Under **Apply to sub-orgs**, click a sub-org option.
5. Under **Shift Bidding Requests affected by this rule**, click one of the options.
6. Under **Autoprocessing Criteria**, do the following to set up autoprocessing criteria for approval and denial:

   a. Based on the autoprocessing action you want to define, select one of the following check boxes:

      - **Approval Criteria**
      - **Denial Criteria**

   b. Click one of the autoprocessing options:

      - **Approve requests with no violations**
      - **Approve requests violating only:** (*selected validation rules*)

   c. If you select the option that requires validation rules for the auto-processing criteria, select one or more of the rules shown in **bold**. This convention indicates which validations rules are configured for this organization. If you select any other rules, they are ignored.

   d. Repeat these steps until you have completed the auto-processing criteria for all actions that you want to use for this request type.
7. Click **Save**.

Shift Bidding Autoprocessing Rule settings

Use a shift bidding rule to define autoprocessing criteria for shift bidding requests.

Apply to Sub-Org section

This section provides options to exclude or include suborganizations from this rule.

Field	Description
Apply to this org only	Rule is applied only to the organization, and not to its suborganizations.
Apply to sub-orgs (no overrides)	Rule is applied to the organization and its sub-organizations. The suborganizations cannot change the status of the rule or edit it.
Apply to sub-orgs (allow overrides)	Rule is applied to the organization and its sub-organizations. The suborganizations can change the status of the rule, but cannot edit it.

Shift Bidding Requests affected by this rule section

This section provides options to limit which requests are auto-processed.

Field	Description
All requests of this type	All shift bidding requests are auto-processed for approval. No restrictions are applied.
For (date range)	Only shift bidding requests submitted for the specified date range are auto-processed for approval.

Autoprocessing Criteria - Approval section

Use this section to select autoprocessing criteria for request approval. This section varies based on request type.

Field	Description
Approval Criteria	When selected, auto-processing is used to approve requests based on the selected criteria.
The following three auto-approve options are available.	
Do not auto approve any requests	No requests are automatically approved. All requests must be approved manually.
Approve requests with no violations	Only requests that do not violate any validation rules configured for this request type are auto-approved.
Approve requests violating only:	The following requests are auto-approved: • Requests that do not violate any validation rules configured for this request type. • Requests that only violate the validation rules selected for approval criteria.

Confidential and Proprietary Information of Verint Systems Inc.

Autoprocessing Criteria - Denial

Field	Description
Denial Criteria	When selected, auto-denial is used to process requests based on the selected criteria.
The following auto-deny options are available.	
Do not auto deny any requests.	No requests are automatically denied. All requests must be denied manually.
Deny requests with at least one violation.	Requests that violate *any* validation rules configured for this request type are automatically denied.
Deny requests violating:	Requests that violate the *selected* validation rules are automatically denied.

Chapter 6

Setting up shift swap requests

With shift swap requests, employees can swap either shifts or days off instead of taking time-off.

The following options are available for swapping:

- Employees can create a post on the swap board, so any employee can accept the offer to swap.
- Employees can send a swap request to a specific employee.

Swap request and swap posting overview

Employees can swap either a shift or a nonworking day using a swap request or swap posting. These features provide options that help employees meet personal obligations without taking time off.

What employees can swap

- **An entire shift**: Employees can give away a full shift that they are scheduled to work. Also, employees can pick up a full shift from a peer. The shift can include a gap.
- **Partial shift**: Employees can give away part of their shift. Also, employees can pick up part of a peer's shift. The shift can include a gap. The entire gap must be swapped.
- **A nonworking day**: A nonworking day is a day that an employee is not scheduled to work. Employees can give away a nonworking day to pick up a shift.

Employees can swap with a peer to work in a gap. Employees can:

- Pick up a full or partial shift in a gap.
- Swap a full or partial shift that has a gap. The entire gap must be swapped.

Ways an employee can swap with another employee

- **Swap requests**: A swap request is between two specific employees. They can:
  - Create a swap request for a specific employee
  - Accept a swap request from another employee
- **Swap posting**: A swap posting is created for anyone to view and accept. Employees can:
  - Create a swap posting for any employee that can view swap board requests
  - Pick up a swap posting created by another employee

A swap is a contract between two employees and must be approved by a manager.

> ⚠ If employees involved in a shift swap are poolers belonging to different campaigns, and the swap is approved, the activities from the campaigns are transferred to each other. In a one-way swap, the shift activity from campaign A is transferred to campaign B. In a two-way swap, the activity in campaign A is transferred to campaign B, and the activity in campaign B is transferred to campaign A. The activities are transferred, regardless of the skill sets present in the respective campaign queues.

Confidential and Proprietary Information of Verint Systems Inc.

Type of swap requests

- **One-way swap**:
  - One-way shift swap: An employee gives away a shift to a peer. When allowed, an employee can give away part of the shift.
  - One way non working day swap: An employee picks up a peer's shift on a day that they are not scheduled to work.
- **Two-way swap**:
  - Two-way shift swap: An employee gives a shift to a peer, and picks up a shift from the peer.
  - Two-way nonworking day swap: Similar to a two-way shift swap, an employee selects a nonworking day to give away and a nonworking day to pick up. If this request is approved, the following changes are effective:
    - On the first day of the swap, the employee picks up the peer's shift and the peer takes the employee's nonworking day.
    - On the second day of the swap the employee picks up the peer's nonworking day and the peer takes the employee's shift.

What employees cannot swap

- A shift on a past date
- A shift that has already started
- An overtime shift or overtime extension
- A shift that contains a time off event from a flex time request
- A shift that is not in 15 minute increments
- A two-way shift swap on different days when there is a shift on the receiving day
- A two-way swap when only one employees has a scheduled shift to swap

Confidential and Proprietary Information of Verint Systems Inc.

Recommended workflow: Set up shift swap requests

Employees can swap either a full or partial shift with or without a gap or a nonworking day using a swap request or a swap posting. For shifts with a gap, the entire gap must be swapped.

This workflow describes the procedures for setting up shift swap requests and using all system features. Follow the procedures that fit the needs of your organization.

Workflow

1. Define settings shared by all request types (page 24)

   While most Request Management settings are specific to one type of request, several optional settings are effective for all request types.
2. Define settings for shift swap requests (page 139)

   Shift swap settings turn on shift swap for an organization, define which organizations can be swapped with, types of swaps allowed, and number of negotiation comments.
3. Create policies for shift swap requests (page 141)

   Shift swap request policies provide guidance to employees about submitting requests. Employees can view this information on the Policies page (on the My Requests menu).
4. Shift swap request validation rules (page 142)

   Validation rules can be defined for both shift swap requests and approved shift swap requests to verify that these requests meet the conditions that you specify. The validation rules that you set for a request type are available as criteria for auto-processing rules.
5. Create filing rules
   - Create a filing rule for shift swap requests (page 147)

     You can create a filing rule to specify when shift swap requests must be submitted. When shift swap requests are submitted, a validation rule verifies that the requests comply with the filing rule.
   - Create a filing rule for approved shift swap withdrawal requests (page 149)

     You can create a filing rule to specify when approved shift swap withdrawal requests must be submitted. When these requests are submitted, a validation rule verifies that the requests comply with the filing rule.
6. Create autoprocessing rules.
   - Create an autoprocessing rule for shift swap requests (page 151)

     While shift swap requests can be processed manually, you can set up a rule for the system to process them automatically. An auto-processing rule can be used to approve and deny requests based on the shift bidding validation rules that you defined.
   - Create an autoprocessing rule for approved shift swap withdrawal requests (page 154)

     While approved shift swap withdrawal requests can be processed manually, you can set up a rule for the system to process them automatically. An auto-processing rule can be used to approve and deny requests based on the validation rules that you set.

Confidential and Proprietary Information of Verint Systems Inc.

Define settings for shift swap requests

Shift swap settings turn on shift swap for an organization, define which organizations can be swapped with, types of swaps allowed, and number of negotiation comments.

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Settings**.
2. From the **Organization Name** pane, click an organization.
3. Define the Shift Swap organization settings:
4. To save these settings, do one of the following:
   - Click **Save and apply to sub-orgs**.
   - Click **Save**.

Related topics

Shift swap settings (page 139)

Recommended workflow: Set up shift swap requests (page 138)

Shift swap settings

Shift swap settings define options and set requirements in shift swap requests submitted by employees in an organization.

Location

On the **Settings** page. This page is on **Organization Management**, under **Request Management**.

Settings

Setting	Description
Enable shift swap	Enables shift swap functionality for the whole organization or branch.
Limit employees' shift swapping to the following organizations	Employees can swap shifts with employees in these organizations.
Disable one-way shift swap	If selected, employees *cannot* do a swap where one employee acquires a shift without giving back another shift.
Allow partial day shift swap requests	If selected, employees can accept a portion of a proposed shift swap instead of an entire shift, and can accept portions of a shift from more than one employee.
Allow pickup of a portion of a posting	If selected, employees can accept a portion of a proposed shift swap instead of an entire shift, and can accept portions of a shift from more than one employee.

Confidential and Proprietary Information of Verint Systems Inc.

Setting	Description
Maximum number of swap negotiation comments per employee	Specifies the number of swap negotiation comments that can be used in negotiating a shift swap. The goal is to reduce comments being used for purposes other than shift swap negotiations.

Create policies for shift swap requests

Shift swap request policies provide guidance to employees about submitting requests. Employees can view this information on the **Policies** page (on the My Requests menu).

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Settings**.
2. From the **Organization Name** pane, click an organization.
3. Under the **Shift Swap Policies** section, type the information you want employees to know about submitting shift swap requests.
4. Do one of the following:
   - Click **Save and apply to sub-orgs**.
   - Click **Save**.

Define validation rules for shift swap requests

Validation rules can be defined for both shift swap requests and approved shift swap requests to verify that these requests meet the conditions that you specify. The validation rules that you set for a request type are available as criteria for auto-processing rules.

Each validation rule has an icon. When a request violates a validation rule, alert information is available on the following:

- Employee Requests page: An alert icon is displayed. When you point to the icon, information about the validation rule violation is displayed.
- The request details: The alert icon and information about the validation rule violation are on the details view.

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Validation**.
2. In the left pane, select an organization.
3. Under the **Shift Swap Request Validation rules** section, define the validation rules that you want to use.
   a. Select the check box.
   b. When needed, complete the rule values when needed (Example: number of minutes, hours, or days).
4. Under the **Approved Shift Swap Withdrawal Validation rules** section, select the check box.
5. Do one of the following:
   - Click **Save**.
   - Click **Save and Apply to Sub-Orgs**.

Shift swap request validation rules

Use any of these rules to set conditions that you want validated in shift swap requests.

- **Both employees are from the same organization.** This rule is violated if employees are assigned to different organizations.
- **Both employees are from the same campaign.** This rule is violated if both shifts in a swap do not belong to the same campaign. They can be in different campaign weeks.
- **Both employees have the same skills for the active campaign queue.** This rule is violated if the receiving employee does not have the same skills as the employee currently scheduled to work the

Confidential and Proprietary Information of Verint Systems Inc.

shift.

- **Both employees have at least same skills for the active campaign queue.** This rule is violated if the receiving employee does not have at least the same skills as the employee currently scheduled to work the shift. Receiving employees with additional skills will not cause a violation.
- **Both employees have the required skills to work the swapped shifts.** This rule is violated if the employee or employees receiving a shift or partial shift do not have the required skills for the activities during that shift or partial shift.
  - One-way shift swap: When the employee receiving the shift does not have the skills to work all activities in the shift, this rule is violated.
  - Two-way shift swap: When a minimum of one of the two employees receiving a shift does not have the skills to work all activities in the shift, this rule is violated.
  - One-way partial shift swap: When the employee receiving the partial shift does not have the skills to work all activities in that partial shift, this rule is violated.
  - Two-way partial shift swap: When a minimum of one of the two employees receiving a partial shift does not have the skills to work all activities in that partial shift, this rule is violated.
- **Both employees have the same proficiencies for the active campaign queue.** This rule is violated if the receiving employee does not have the same skills and proficiencies as the employee currently scheduled to work the shift.
- **Request complies with filing rules.** This rule is violated if the request submittal date violates any of the filing rules applicable to the employee's organization.
- **Both employees comply with min/max hours.** This rule is violated if, after the swap, at least one of the employees will not comply with the min/max hours during the corresponding week(s) of the shift they get and the shift they give away in the swap.
- **Swapped shifts start on the same organization week.** This rule is violated if the swapped shifts do not fall in the same organization week.
- **Swapped shifts have the same paid hours.** This rule is violated if the total duration of paid time in the two shifts is different.
- **Swapped shifts must overlap the exact same portion with scheduled calendar events and time offs, and not overlap unavailabilities.** This rule is violated if the following events occur:
  - Calendar events, which may or may not be inside a shift, do not overlap the same portion of the swapped-in shift.
  - Time off events, which may or may not be inside a shift, do not overlap the same portion of the swapped-in shift.
  - Any unavailability type event will overlap with the swapped shifts as the result of the swap.
- **Swapped shifts will overlap scheduled calendar events that must occur during a shift.** This rule is violated if calendar events, which have to be inside a shift, fall outside shifts as the result of the swap.

Confidential and Proprietary Information of Verint Systems Inc.

- **Partial Shift Swap: Minimum duration of the shift that can be swapped:** <*number*> **Percent** or **Minutes.** This rule is violated if the duration of the swapped shift is less than the specified duration.
- **Partial Shift Swap: Minimum duration of the shift to leave after pickup:** <*number*> **Percent** or **Minutes.** This rule is violated if the remaining shift duration after the swap is less than the specified duration.
- **Maximum paid duration allowed:** <*number*> **minutes per** <**Organization Day** or **24 Hour Period**>**.** This rule is violated if the request causes the paid duration to exceed the user-defined duration allowed for the selected period. Shift length is not considered; however, all paid hours during the selected period are considered. For the paid duration calculation, only paid hours are counted. Shift work (normal shifts, overtime, overtime extension) and time off are counted as paid hours. Flex time off segments are not counted as paid hours.

  For the reference period that defines the day, select from the following options:

  - **Organization Day**: If all employees only have shifts that start and end in the organization day boundary, use this option.
    During validation, the duration calculation uses the time period defined for the organization day. The organization day is defined on the Organization Setting page (located on the Organization Management menu, under Hierarchies). If the maximum paid duration threshold is exceeded, an alert is generated.
  - **24 Hour Period**: If any employees have shifts that cross the organization day boundary (shift starts on one day and ends on another day), use this option.

    During validation, the duration calculation uses a sliding 24-hour window that increments by 15 minutes. The sliding window begins 24 hours + 15 minutes before the request start time and stops at 24 hours - 15 minutes after the request end time. If the maximum paid duration threshold is exceeded in a 24-hour window, the rule is violated. No more 24-hour windows are checked, and an alert is generated.
- **Partial Shift Swap: Activities that cannot be included in the swap:** <*activity name(s) from drop-down*>. This rule is violated if the swap includes any of the specified activities.
- **Gap should be between** <*number*> **and** <*number*> **minutes, or at least** <*number*> **minutes.** This rule is violated if the gap created as a result of the swap is outside the specified range, or if the gap is less than the specified duration. If both the range and the minimum are specified, the rule will be violated only if both the conditions are violated.
- **Maximum overlap with an existing shift:** <*number*> **minutes.** This rule is violated if the overlap with an existing shift caused due to the swap is greater than the specified duration.
- **Maximum consecutive working days allowed as per organization Settings.** This rule is violated if the maximum consecutive working days limit is exceeded.

  This rule only checks the start of shifts (not the end dates).

  The **Maximum consecutive working days to schedule** set on the **Organization Settings** page. under the **Scheduler Options** section. This page is located on **Organization Management**, under **Hierarchies**. For example, if the maximum consecutive working days count is set to three, and Employee A is requesting a one-way shift swap from 4/1 to 14/1 then the rule would validate if this

Confidential and Proprietary Information of Verint Systems Inc.

shift swap would violate the maximum consecutive working day count for shifts from 1/1 to 1/17, and for the period 1/11 to 1/17.

- **Minimum required time gap between consecutive shifts as per organization Settings.**

  This rule is violated if the minimum time between the end of a first shift and the start of the next shift for all types of shift swap requests is not met.

  The **Minimum time between shift assignments is** set on the **Organization Settings** page. under the **Scheduler Options** section. This page is located on **Organization Management**, under **Hierarchies**.

- **Maximum number of** <*number*> **one-way shift swap requests per**<**Month** or **Quarter**>**.** This rule is violated if the number of one-way shift swaps requested exceeds the maximum number of one-way shift swap requests allowed per month or quarter.

  When this rule is selected for an employee's organization, the One Way Shift Swap section is available on the following pages:

  - **Time Summary**: This page is located on **Tracking**, under **Roster**.
  - **My Schedule Summary**: This page is located on **My Home**, under **My Schedule**.)

    This rule does not count a swap against the one-way swap limit if the employee picks up another shift on the day that was previouly given away.

- **Maximum number of approved swaps for a shift** <*number*>**.** This rule is violated if the shift swap requested exceeds the maximum number of shift swaps allowed per shift.

- **Partial Shift Swap: Limit number of employees involved to** <*number*>**.** This rule is violated if the number of employees who can receive swaps from the same shift is exceeded. This rule is limited to partial swaps.

- **Maximum hours per day** <*number*> **with an alternate maximum hours of** <*number*> **the day after the swap when the maximum hours were reached the day before.** This rule is violated if either condition one or condition two is met.

  - **Condition one**: **Maximum hours per day** <*number*>

    This rule condition is violated if the maximum hours per day limit is exceeded due to a shift swap (that is, an employee works a standard shift and picks up a shift from another employee).

  - **Condition two**: **with an alternate maximum hours of** <*number*> **the day after the swap when the maximum hours were reached the day before.**

    This rule condition is violated if the maximum hours in the day after a shift swap limit is exceeded after the maximum hours per day limit was reached on the previous day.

    Example of completed rule:

    Maximum hours per day 12 with an alternate maximum hours of 10 the day after the swap when the maximum hours were reached the day before.

    Example of results:

Confidential and Proprietary Information of Verint Systems Inc.

- **Condition one**: If Employee A's standard shift is 8 hours AND Employee A submits a request to pickup a 4-hour shift from Employee B on Monday, then the first condition of this rule is not violated. The maximum hours per day limit is *reached*, but not *exceeded*.
- **Condition one**: If Employee C's standard shift is 8 hours AND Employee C submits a request to pickup a 6-hour shift from Employee D on Monday, then the first condition of this rule is *violated*. The maximum hours per day limit is *exceeded*.
- **Condition two**: If Employee A's shift swap request for Monday is approved (total of 12 hours), AND Employee A submits a request to swap their 8-hour shift with Employee E's 12-hour shift on the next day (Tuesday), then the rule is violated. The 12-hour work day on Tuesday exceeds the 10-hour limit for the day after a swap that reached the maximum hours limit per day.

- **Request complies with Required Pay Period Hours.** This rule is violated if the employee's shift swap request would cause the employee not to meet the minimum hours in a pay period.

  Tracking for the Required Pay Period Hours is set up on the **Settings** page. This page is located on **Organization Management**, under **Request Management**. When this setting is selected for an employee's organization, the Required Hours (balance) for Pay Period section is available on the following pages:

  - **Time Summary**: This page is located on **Tracking**, under **Roster**.
  - **My Schedule Summary**: This page is located on **My Home**, under **My Schedule**.

  One or more time-off activities must be set up to deduct from the Required Pay Period Balance. (This setting is on the **Activities** page, under the **Request Management Usage** section. This page is located on **Work Administration**, under **Activities**.

Create an autoprocessing rule for shift swap requests

While shift swap requests can be processed manually, you can set up a rule for the system to process them automatically. An auto-processing rule can be used to approve and deny requests based on the shift bidding validation rules that you defined.

After an autoprocessing rule has been created for an organization, you can copy it to another organization to save time. The **copy to** organization becomes an owner organization of the rule too (as if the rule was created by the organization).

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Autoprocessing**.
2. On the **Autoprocessing** list page, click **Create New Rule**.
3. On the **Create New Autoprocessing Rule** popup, click **Shift Swap**.

   The **Autoprocessing** rule form is displayed.
4. Optional: Under **Apply to sub-orgs**, click a sub-org option.
5. Under **Shift Swap Requests affected by this rule**, click one of the options.
6. Under **Autoprocessing Criteria**, do the following to set up autoprocessing criteria for approval and denial:

   a. Based on the autoprocessing action you want to define, select one of the following check boxes:

      - **Approval Criteria**
      - **Denial Criteria**

   b. Click one of the autoprocessing options.

   c. If you selected the option that requires validation rules for the auto-processing criteria, select one or more of the rules shown in **bold**. This convention indicates which validations rules are configured for this organization. If you select any other rules, they are ignored.

   d. Repeat these steps until you have completed the auto-processing criteria for all actions that you want to use for this request type.
7. Click **Save**.

Shift swap autoprocessing rule settings

Autoprocessing rule settings define whether the rule applies to suborganizations, which flex time requests are affected, and the auto-processing criteria.

Location

These settings are on the **Autoprocessing** page when the Create New Autoprocessing Rule type is Shift Swap. This page is on **Organization Management**, under **Request Management**.

Apply to sub-orgs section

This section provides options to exclude or include suborganizations from this rule.

Field	Description
Apply to this org only	Rule applies only to the organization, and not to its suborganizations.
Apply to sub-orgs (no overrides)	Rule applies to the organization and its sub-organizations. The suborganizations cannot change the status of the rule or edit it.
Apply to sub-orgs (allow overrides)	Rule applies to the organization and its sub-organizations. The suborganizations can change the status of the rule, but cannot edit it.

Shift Swap Requests affected by this rule

This section provides options to limit which requests are auto-processed.

Field	Description
All requests of this type	All shift swap requests are autoprocessed for approval. No restrictions are applied.
For (date range)	Only shift swap requests submitted for the specified date range are autoprocessed for approval.

Confidential and Proprietary Information of Verint Systems Inc.

Autoprocessing Criteria - Approval section

Use this section to select auto-processing criteria for request approval. This section varies based on request type.

Field	Description
Approval Criteria	When selected, autoprocessing approves requests based on the selected criteria.
The following three auto-approve options are available.	
Do not auto approve any requests	No requests are automatically approved. All requests must be approved manually.
Approve requests with no violations	Only requests that do not violate any validation rules configured for this request type are auto-approved.
Approve requests violating only:	The following requests are auto-approved: • Requests that do not violate any validation rules configured for this request type. • Requests that only violate the validation rules selected for approval criteria.

Autoprocessing Criteria - Denial

Field	Description
Denial Criteria	When selected, auto-denial is used to process requests based on the selected criteria.
The following auto-deny options are available.	
Do not auto deny any requests.	No requests are automatically denied. All requests must be denied manually.
Deny requests with at least one violation.	Requests that violate *any* validation rules configured for this request type are automatically denied.
Deny requests violating:	Requests that violate the *selected* validation rules are automatically denied.

Create an autoprocessing rule for approved shift swap withdrawal requests

While approved shift swap withdrawal requests can be processed manually, you can set up a rule for the system to process them automatically. An auto-processing rule can be used to approve and deny requests based on the validation rules that you set.

After an autoprocessing rule has been created for an organization, you can copy it to another organization to save time. The **copy to** organization becomes an owner organization of the rule too (as if the rule was created by the organization).

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Autoprocessing**.
2. On the **Autoprocessing** list page, click **Create New Rule**.
3. On the **Create New Autoprocessing Rule** popup, click **Approved Shift Swap Withdrawal**.
4. In the left pane of the **Auto Processing** rule form, click an organization.
5. Optional: Under **Apply to sub-orgs**, click a sub-org option.
6. Under **Approved Shift Swap Withdrawal Requests affected by the rule your are creating**, click one of the options.
7. Under **Autoprocessing Criteria**, do the following to set up autoprocessing criteria for approval and denial:
   a. Based on the autoprocessing action you want to define, select one of the following check boxes:
      - **Approval Criteria**
      - **Denial Criteria**
   b. Click one of the auto-processing options.
   c. If you selected the option that requires validation rules for the auto-processing criteria, select one or more of the available rules.
   d. Repeat these steps until you have completed the auto-processing criteria for all actions that you want to use for this request type.
8. Click **Save**.

Approved shift swap withdrawal autoprocessing rule settings

Autoprocessing rule settings define whether the rule applies to suborganizations, which shift swap requests are affected, and the auto-processing criteria.

Location

These settings are on the **Autoprocessing** page when the Create New Autoprocessing Rule type is Approved Shift Swap Withdrawal. This page is on **Organization Management**, under **Request Management**.

Apply to sub-orgs section

This section provides options to exclude or include suborganizations from this rule.

Field	Description
Apply to this org only	Rule applies only to the organization, and not to its suborganizations.
Apply to sub-orgs (no overrides)	Rule applies to the organization and its sub-organizations. The suborganizations cannot change the status of the rule or edit it.
Apply to sub-orgs (allow overrides)	Rule applies to the organization and its sub-organizations. The suborganizations can change the status of the rule, but cannot edit it.

Approved Shift Swap Withdrawal Requests affected by the rule you are creating

This section provides options to limit which requests are auto-processed.

Field	Description
All requests of this type	All requests are auto-processed for approval. No restrictions are applied.
For (date range)	Only requests submitted for the specified date range are autoprocessed for approval.

Autoprocessing Criteria - Approval section

Use this section to select autoprocessing criteria for request approval.

Field	Description
Approval Criteria	When selected, auto-processing approves requests based on the selected criteria.
The following three auto-approve options are available.	
Do not auto approve any requests	No requests are automatically approved. All requests must be approved manually.
Approve requests with no violations	Only requests that do not violate any validation rules configured for this request type are auto-approved.

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Approve requests violating only:	The following requests are auto-approved: • Requests that do not violate any validation rules configured for this request type. • Requests that only violate the validation rules selected for approval criteria.

Autoprocessing Criteria - Denial

Field	Description
Denial Criteria	When selected, auto-denial is used to process requests based on the selected criteria.
The following auto-deny options are available.	
Do not auto deny any requests.	No requests are automatically denied. All requests must be denied manually.
Deny requests with at least one violation.	Requests that violate *any* validation rules configured for this request type are automatically denied.
Deny requests violating:	Requests that violate the *selected* validation rules are automatically denied.

Chapter 7

Setting up shift requests & changes

With the shift request & change feature, employees can request shifts on unscheduled days and request changes to their existing shifts.

Employees can do the following:

- Create shift requests for days when they are not scheduled to work.
- Change shift start time.
- Choose different shifts.
- Create overtime requests.
- Create requests to add overtime extensions or regular time extensions at the start of or end of existing shifts.
- Create requests to withdraw approved requests.

Topics

Recommended workflow: Set up shift requests & changes 158

Define settings for shift requests & changes 159

Create policies for shift requests & changes 162

Define validation rules for shift requests & changes 163

Create a filing rule for shift requests & changes 167

Create a filing rule for approved shift request & change withdrawal requests 169

Create an autoprocessing rule for shift requests & changes 171

Create an autoprocessing rule for approved shift request & change withdrawal requests 174

Recommended workflow: Set up shift requests & changes

With the shift request & change feature, employees can request shifts on unscheduled days and request changes to their existing shifts. When needed, employees can submit a request to withdraw an approved request.

This workflow describes the procedures for setting up shift requests & changes using all system features. Follow the procedures that fit the needs of your organization.

Workflow

1. Define settings shared by all request types (page 24)

   Shared request settings are optional settings that are effective for all request types.
2. Define settings for shift requests & changes (page 159)

   Shift requests & change settings control who can submit these requests and what types of requests can be made.
3. Create policies for shift requests & changes (page 162)

   Shift request & changes policies provide guidance to employees about submitting requests. Employees can view this information on the Policies page. This page is on My Home, under My Requests.
4. Define validation rules for shift requests & changes (page 163)

   Validation rules verify that requests meet the conditions that you specify. Rules can be defined for both shift requests & changes and approved shift request & changes withdrawal requests.
5. Create filing rules.
   - Create a filing rule for shift requests & changes (page 167)

     You can create a filing rule to specify when shift requests & changes must be submitted. When these requests are submitted, a validation rule verifies that they comply with the filing rule.
   - Create a filing rule for approved shift request & change withdrawal requests (page 169)

     You can create a filing rule to specify when approved shift request & change withdrawal requests must be submitted. When these requests are submitted, a validation rule verifies that these requests comply with the filing rule.
6. Create autoprocessing rules.
   - Create an autoprocessing rule for shift requests & changes (page 171)

     While shift requests & changes can be processed manually, you can set up a rule for the system to process them automatically. An auto-processing rule can be used to approve and deny requests based on violation of validation rules.
   - Create an autoprocessing rule for approved shift request & change withdrawal requests (page 174)

     While approved shift request & change withdrawal requests can be processed manually, you can set up a rule for the system to process them automatically. An autoprocessing rule can be used to approve and deny requests based on the validation rules that you set.

Confidential and Proprietary Information of Verint Systems Inc.

Define settings for shift requests & changes

Shift requests & change settings control who can submit these requests and what types of requests can be made.

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Settings**.
2. From the **Organization Name** pane, click an organization.
3. Define the Shift Requests & Changes organization settings.
4. To save these settings, do one of the following:
   - Click **Save and apply to sub-orgs**.
   - Click **Save**.

Related topics

Shift requests & changes settings (page 159)

Recommended workflow: Set up shift requests & changes (page 158)

Shift requests & changes settings

The shift requests & changes settings make the shift request & shift change features available and define which types of these requests can be submitted.

Location

These settings are on the **Settings** page. This page is on **Organization Management**, under **Request Management**.

Settings	Description
Allow requests for new shifts	*Employees* and *supervisors* can submit requests for new shifts.
Allow requests for regular (non-overtime) shifts	Requests can be submitted for new, regular shifts.
Allow requests for overtime shifts	Requests can be submitted for new, overtime shifts.
Allow requests for changes to existing shifts	*Employees* and *supervisors* can submit requests for changes to shifts that have already been scheduled.
Allow requests to modify start time	Requests can be submitted to change the start time of existing requests.
Allow requests to modify shift selection	Requests can be submitted to change the shift selection.
Allow requests for extensions	*Employees* and *supervisors* can submit requests for extensions to new and existing shifts.

Confidential and Proprietary Information of Verint Systems Inc.

Settings	Description
Allow requests for regular (non-overtime) extensions before a shift	Requests can be submitted for extra regular time before the *beginning* of a new or an existing shift.
Allow requests for regular (non-overtime) extensions after a shift	Requests can be submitted for extra regular time after the *end* of a new or an existing shift.
Allow requests for regular (non-overtime) extensions during a gap	Requests can be submitted for extra regular time during available gaps that occur during a new or existing scheduled shift. Available gaps include both shift/overtime gaps and custom shift gap activities. A custom gap activity is an activity with the **Allow Extensions** field set to **Yes, treat as a shift gap**. (This field is located on the **Activity Details** page, under the **Request Management Usage** section.)
Allow requests for regular (non-overtime) extensions during adjustable breaks	Requests can be submitted for extra regular time during adjustable breaks that occur during a new or existing shift. An adjustable break is an activity with the **Allow Extensions** field set to **Yes, treat as an adjustable break**. (This field is located on the **Activity Details** page, under the **Request Management Usage** section.)
Allow requests for overtime extensions before a shift	Requests can be created for an overtime extension before the start of a new or an existing shift.
Allow requests for overtime extensions after a shift	Requests can be created for an overtime extension after the end of a new or an existing shift.
Enforce the duration for overtime extension requests	The value for the **Duration** (Length) is enforced in Shift Change requests. Users cannot edit the Duration. If this check box is clear, the value set for the **Duration** (Length) of the overtime extension in the work rules is not enforced. Users can change the value to anything from 1 minute to 24 hours when submitting a Shift Change request. Employees (agent role) can edit this value on their My Requests page and the Schedule page. Some non-agent roles, such as Supervisor, can edit this value for an employee on the Schedule page and the Employee Requests page. The value of the **Duration** (Length) of the overtime extension is defined on the **OT Extension** page. (This page is on **Work Administration**, under **Work Rules**.)

Confidential and Proprietary Information of Verint Systems Inc.

Settings	Description
Enforce the gap for overtime extension requests	The values set for the **Min Gap** and **Max Gap** of the overtime extension are enforced. When requesting an overtime extension, users can change these gap values to any value between the **Min Gap** and the **Max Gap**. Employees (agent role) can edit this value on their **My Requests** page and the **Schedule** page. Some non-agent roles, such as Supervisor, can edit this value for an employee on the **Schedule** page and the **Employee Requests** page. **Example - Create a new request form**: If the work rule has a Min Gap of 15 minutes and a Max Gap of 1 hour, the user cannot select a Min Gap value lower than 15 or a Max Gap value higher than one hour. **Net Staffing Ribbon behavior**: If users draw the gap on the net staffing ribbon, the value populated on the request form varies based on whether the gap drawn is inside the **Min Gap** and **Max Gap** values. • If the user draws a gap that is inside the Min Gap and Max Gap values, the request form is populated with the gap. • If the user draws a gap lower than the Min Gap value, the request form is populated with the Min Gap value. • If the user draws a gap that is higher the Max Gap value, the request form is populated with the Max Gap value. If this check box is clear, the value for the **Min Gap** and **Max Gap** of the overtime extension is not enforced. Users can change the value to anything from 1 minute to 24 hours. Employees (agent role) can edit this value on their **My Requests** page and the **Schedule** page. Some non-agent roles, such as Supervisor, can edit this value for an employee on the **Schedule** page and the **Employee Requests** page. The value of the **Min Gap** and **Max Gap** of the overtime extension is defined on the **OT Extension** page. (This page is on **Work Administration**, under **Work Rules**.)

Define validation rules for shift requests & changes

Validation rules verify that requests meet the conditions that you specify. Rules can be defined for both shift requests & changes and approved shift request & changes withdrawal requests.

Each validation rule has an icon. When a request violates a validation rule, alert information is available on the following:

- Employee Requests page: An alert icon is displayed. When you point to the icon, information about the validation rule violation is displayed.
- The request details: The alert icon and information about the validation rule violation are on the details view.

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Validation**.
2. In the left pane, select an organization.
3. Under the **Shift Requests & Changes Validation rules** section, define the validation rule that you want to use.
   a. Select the check box.
   b. When needed, complete the rule values. (Example: number of minutes, hours, or days)
4. Under the **Approved Shift Requests & Changes Withdrawal Validation rules** section, select the check box.
5. Do one of the following:
   - Click **Save**.
   - Click **Save and Apply to Sub-Orgs**.

Related topics

Shift requests & changes validation rules (page 163)

Recommended workflow: Set up shift requests & changes (page 158)

Shift requests & changes validation rules

Use any of these validation rules to set conditions that you want validated in shift requests and changes.

- **A minimum of** <*x*> **percent of changed intervals improves net staffing.** This rule is violated when the percentage of intervals that will be changed by the request is less than the specified minimum percentage for net staffing improvement. Gaps between shifts and extensions are not included.

  The minimum staffing level percentage is calculated as follows:

Confidential and Proprietary Information of Verint Systems Inc.

Improvement Percentage = (#periods where net staffing is improved / (#periods where net staffing is improved + #periods where net staffing is worsened))*100

- **Maximum paid duration allowed:** <*number*> **minutes per** <**Organization Day** or **24 Hour Period**>**.** This rule is violated if the request causes the paid duration to exceed the user-defined duration allowed for the selected period. Shift length is not considered; however, all paid hours during the selected period are considered. For the paid duration calculation, only paid hours are counted. Shift work (normal shifts, overtime, overtime extension) and time off are counted as paid hours. Flex time off segments are not counted as paid hours.

  For the reference period that defines the day, select from the following options:

  - **Organization Day**: If all employees only have shifts that start and end in the organization day boundary, use this option.
    During validation, the duration calculation uses the time period defined for the organization day. The organization day is defined on the Organization Setting page (located on the Organization Management menu, under Hierarchies). If the maximum paid duration threshold is exceeded, an alert is generated.
  - **24 Hour Period**: If any employees have shifts that cross the organization day boundary (shift starts on one day and ends on another day), use this option.
    During validation, the duration calculation uses a sliding 24-hour window that increments by 15 minutes. The sliding window begins 24 hours + 15 minutes before the request start time and stops at 24 hours - 15 minutes after the request end time. If the maximum paid duration threshold is exceeded in a 24-hour window, the rule is violated. No more 24-hour windows are checked, and an alert is generated.

- **Minimum paid duration allowed:** <*number*> **minutes per** <**Organization Day** or **24 Hour Period**>**.** This rule is violated if the request causes the employee to fall under the user-defined duration allowed for the selected period. Shift length is not considered; however, all paid activities during the selected period are considered. For the paid duration calculation, only paid hours are counted. Shift work (normal shifts, overtime, overtime extension) and time off are counted as paid hours. Flex time off segments are not counted as paid hours.

  For the reference period that defines the day, select from the following options:

  - **Organization Day**: If all employees only have shifts that start and end in the organization day boundary, use this option.
    During validation, the duration calculation uses the time period defined for the organization day. The organization day is defined on the Organization Setting page (located on the Organization Management menu, under Hierarchies). If the minimum paid threshold is not met, an alert is generated.
  - **24 Hour Period**: If any employees have shifts that cross the organization day boundary (shift starts on one day and ends on another day), use this option.

    During validation, the duration calculation uses a sliding 24-hour window that increments by 15 minutes. The sliding window begins 24 hours + 15 minutes before the request start time and stops at 24 hours - 15 minutes after the request end time. If the minimum paid duration threshold is not met after checking all windows, an alert is generated.

Confidential and Proprietary Information of Verint Systems Inc.

- **Minimum duration of the activity** <*adjustable break activity or shift gap activity*> **is** <*number*> <**Minutes** or **Hours**> after an extension during the activity. This rule is violated if the minimum duration of the selected activity will not be met after an extension during the activity. (Until shift event activities are created for adjustable breaks or shift gaps, the list of break activities is empty.) Example - adjustable break activity: Employees get a 60 minute, unpaid lunch break for a shift that exceeds six hours. By law, they are required to take 30 minutes for lunch. You can define this rule with a minimum activity duration of 30 minutes to prevent employees from making their lunch break too short.
  Two break segments can occur due to a gap--one segment before and one segment after the work extension. Only one of these break segments must meet the minimum duration requirement in this rule.

  If you are defining this rule for multiple activities with the same duration, you can select all applicable activities and enter the duration once. If you are defining this rule for activities with different durations, define each activity separately. Also, you can save or cancel all activities at one time instead of processing them individually. By default, the first adjustable break activity shows in the list box.

  To remove a maximum duration for an activity, set the duration to *blank* and save the change.
- **Maximum consecutive working days allowed as per organization Settings.** This rule is violated if the request causes the user to exceed the maximum number of consecutive working days that has been defined for the organization.
- **Minimum required time gap between consecutive shifts as per organization Settings.** This rule is violated if approving the shift change request results in the minimum time gap between shifts being violated. The time gap is determined by comparing the start time of the requested shift with the end time of the preceding shift; in addition the end time of the requested shift is checked against the start time of the succeeding shift.
- **Request complies with filing rules.** This rule is violated if the request submittal date violates any of the filing rules applicable to the employee's organization.
- **Employee's schedule complies with min/max hours, including OT maximums.** This rule is violated if approving the request causes the employee not to meet or to exceed the minimum or maximum hours allowed respectively, including the maximum overtime allowed per day/week.
- **Employee's schedule complies with organization hours of operation.** This rule will generate an alert if approving the request causes the employee's working hours to fall outside the defined hours of operation for the organization.
- **Request does not overlap with a time off event.** This rule is violated if the request overlaps with a time-off event.
- **Request does not overlap with an unavailability.** This rule is violated if the shift change request overlaps with an unavailability.
- **Request period is published.** This rule is violated if the request date and time range falls outside a published period. If any part of the shift is outside a published period, the validation fails.
- **Request complies with Required Pay Period Hours.** This rule is violated if the request would cause the employee to not meet the minimum hours in a pay period.

  Tracking for the Required Pay Period Hours is set up on the **Settings** page. This page is on **Organization Management**, under **Request Management**. When this setting is selected for an

Confidential and Proprietary Information of Verint Systems Inc.

employee's organization, the Required Hours (balance) for Pay Period section is available on the following pages:

- **Time Summary**: This page is located on **Tracking**, under **Roster**.
- **My Schedule Summary**: This page is located on **My Home**, under **My Schedule**.

Shift request & changes filing rule settings

Use these settings to create a filing rule for shift requests & changes.

Location

These settings are on the **Filing Rules** page when the selected request type is Shift Request & Change. This page is on **Organization Management**, under **Request Management**.

Settings

Field	Description
Shift Requests and Changes affected by this rule	Specifies which types of regular and overtime requests are affected.

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Requested Dates	Specifies which requests are affected based on the request date: • All requests of this type (default setting) • For (limited to requests that start between a specific date and time range)

Request must be filed	Two settings with multiple options are available.
	• Use the first setting to create a rule that a request must be submitted on, before, or after a *specific* date and time.
	• Use the second setting to create a rule that controls whether a request can be made for dates that occur in the future or the past and specify the time period for the requested dates:
	  ▪ If you want to allow requests for future dates and want to limit the time period of the requested future dates, then create an *in advance* rule that specifies the time period the request dates must occur in.
	  ▪ If you want to allow requests for past dates and want to limit the time period of the requested past dates, then create an *in the past* rule that specifies the time period the request dates must occur in.
	  ▪ If you do not want to allow requests for any dates in the past, then create an *in the past* rule and specify zero days.

Apply to sub-orgs	Specifies whether this rule applies only to the organization or to the organization and its suborganizations.

Related topics

Create a filing rule for approved shift request & change withdrawal requests (page 169)

Confidential and Proprietary Information of Verint Systems Inc.

Create an autoprocessing rule for shift requests & changes

While shift requests & changes can be processed manually, you can set up a rule for the system to process them automatically. An auto-processing rule can be used to approve and deny requests based on violation of validation rules.

If the autoprocessing criteria results in a request that can be both approved and denied, the request is processed with a Pending Approval status.

After an autoprocessing rule has been created for an organization, you can copy it to another organization to save time. The **copy to** organization becomes an owner organization of the rule too (as if the rule was created by the organization).

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Autoprocessing**.
2. On the **Autoprocessing** list page, click **Create New Rule**.
3. On the **Create New Autoprocessing Rule** popup, click **Shift Request & Change**.
4. In the left pane, click an organization.
5. Optional: Under **Apply to sub-orgs**, click a sub-org option.
6. Under **Shift Requests & Changes affected by this rule**, click one of the options.
7. Under **Autoprocessing Criteria**, do the following to set up autoprocessing criteria for approval and denial:
   a. Based on the autoprocessing action you want to define, select one of the following check boxes:
      - **Approval Criteria**
      - **Denial Criteria**
   b. Click one of the autoprocessing options:
   c. If you selected the option that requires validation rules for the autoprocessing criteria, select one or more of the rules shown in **bold**. This convention indicates which validations rules are configured for this organization. If you select any other rules, they are ignored.
   d. Repeat these steps until you have completed the autoprocessing criteria for all actions that you want to use for this request type.
8. Click **Save**.

Shift request & change autoprocessing settings

Autoprocessing rule settings define whether the rule applies to suborganizations, which requests are affected, and the autoprocessing criteria.

Location

These settings are on the **Autoprocessing** page when the Create New AutoProcessing Rule type is Shift Request & Change. This page is on **Organization Management**, under **Request Management**.

Apply to sub-orgs section

This section provides options to exclude or include suborganizations from this rule.

Field	Description
Apply to this org only	Rule applies only to the organization, and not to its suborganizations.
Apply to sub-orgs (no overrides)	Rule applies to the organization and its suborganizations. The suborganizations cannot change the status of the rule or edit it.
Apply to sub-orgs (allow overrides)	Rule applies to the organization and its suborganizations. The suborganizations can change the status of the rule, but cannot edit it.

Shift Requests & Changes affected by this rule

This section provides options to limit which requests are autoprocessed.

Field	Description
(type of regular or overtime requests)	Only the selected regular time and overtime requests types are auto-processed for approval. Any or all the following types can be selected: • Regular time: New Shift and Shift Change • Overtime: New Shift and Shift Change
All requests of this type	All requests are autoprocessed. No restrictions are applied.
For (date range)	Only requests submitted for the specified date range are autoprocessed.

Confidential and Proprietary Information of Verint Systems Inc.

Auto-Processing Criteria - Approval section

Use this section to select auto-processing criteria for request approval. This section varies based on request type.

Field	Description
Approval Criteria	When selected, autoprocessing approves requests based on the selected criteria.
The following three auto-approve options are available.	
Do not auto approve any requests	No requests are automatically approved. All requests must be approved manually.
Approve requests with no violations	Only requests that do not violate any validation rules configured for this request type are autoapproved.
Approve requests violating only:	The following requests are auto-approved: • Requests that do not violate any validation rules configured for this request type. • Requests that only violate the validation rules selected for approval criteria.

Auto-Processing Criteria - Denial

Field	Description
Denial Criteria	When selected, auto-denial is used to process requests based on the selected criteria.
The following auto-deny options are available.	
Do not auto deny any requests.	No requests are automatically denied. All requests must be denied manually.
Deny requests with at least one violation.	Requests that violate *any* validation rules configured for this request type are automatically denied.
Deny requests violating:	Requests that violate the *selected* validation rules are automatically denied.

Create an autoprocessing rule for approved shift request & change withdrawal requests

While approved shift request & change withdrawal requests can be processed manually, you can set up a rule for the system to process them automatically. An autoprocessing rule can be used to approve and deny requests based on the validation rules that you set.

After an autoprocessing rule has been created for an organization, you can copy it to another organization to save time. The **copy to** organization becomes an owner organization of the rule too (as if the rule was created by the organization).

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Auto Processing**.
2. In the left pane, click an organization.
3. On the **Autoprocessing** list page, click **Create New Rule**.
4. On the **Create New Autoprocessing Rule** popup, click **Approved Shift Request & Change Withdrawal**.

   The **Autoprocessing** rule form is displayed.
5. Optional: Under **Apply to sub-orgs**, click another sub-org option.
6. Under **Approved Shift Request & Change Withdrawal Requests affected by this rule**, click any or all of the options.
7. Optional: Under **Requested Dates**, select the other option.
8. Under **Autoprocessing Criteria**, do the following to set up auto-processing criteria for approval and denial:

   a. Based on the autoprocessing action you want to define, select one of the following check boxes:

      - **Approval Criteria**
      - **Denial Criteria**

   b. Click one of the autoprocessing options:

   c. If you select the option that requires validation rules for the autoprocessing criteria, select one or more rules shown in **bold**. This convention indicates which validation rules are configured for this organization. If you select any other rules, they are ignored.

   d. Repeat these steps until you have completed the autoprocessing criteria for all actions that you want to use for this request type.
9. Click **Save**.

Create a shift optimization rule 190

Shift optimization rules overview

When an employee request that adds or removes time from a shift is approved, the system checks whether to apply a *shift optimization rule*.

Shift optimization rules determine the circumstances under which working or non-working shift events in the shift assignment are optimized. According to a defined shift template, shift optimization rules place shift events in the optimal time slots in the updated shift assignment.

Shift optimization rules avoid the manual process of reviewing each shift after the approval of a request that results in a longer or shorter shift. These rules also take advantage of the shifts you already use in your environment to determine the number and placement of shift events within the updated shifts.

Shift optimization of non-working shift events

When a shift optimization rule is applied to a shift with *non-working* shift events, all existing shift events are removed from the shift, and the non-working shift events defined in the rule are placed in the optimal time slots in the updated shift.

> There could be a scenario where the original shift does *not* have any non-working shift events, but the system places non-working shifts in the shift after applying the shift optimization rule.

Shift optimization of working shift events

When a shift optimization rule is applied to a shift with *working* shift events, the system first checks whether the shift template defined in the rule *contains the same activity* as each working shift event.

At this point, one of the following occurs:

- If the defined shift template does *not* contain the working shift event activity, the system does *not* apply the shift optimization rule for that activity. The scenario usually occurs because this working shift event is an *exception* that was added manually by a user or process, and therefore, the system does *not* undo these updates by applying an optimization rule.
- If the defined shift template does contain the working shift event activity, the system applies the rule, merging the working shift event activity with any other working shift events that exist in the shift and not in the template.

  The system first *removes* the event from the original shift, and then places it back into the shift in potentially a different time slot and order, according to the shift event rules. For example, it is possible that according to the rule, the event needs to be placed *on top of* another working shift event. However, the system *cannot* schedule two overlapping working shift events. Therefore, the solution is that the system *merges* these two working shift events together, which can be done by making one shift event shorter to fit in the other shift event.

  If non-working shift events are also selected to be optimized, the system adds any new non-working shift events that are defined by the shift template.

Request types to which shift optimization rules are applied

Any or all request types can be included in a shift optimization rule. These rules are effective regardless of how the request is approved (whether by auto processing approval, manual approval, or waitlist scan).

Confidential and Proprietary Information of Verint Systems Inc.

Except for Shift Request & Change, all request types can include withdrawals in the rule. When a Shift Request and Change withdrawal is approved, the original shift is restored.

Different shift optimization rules can apply to each side of a shift swap request, due to different shift lengths or organization assignments for the employees.

Shift optimization rules do *not* apply to schedule changes using other tools and system features, such as Mass Schedule Editor or Schedule Import.

Shift optimization rules effect on adjustable breaks

- If the shift in the shift optimization rule contains the same adjustable break as the flex time or shift request and change, the adjustable break is optimized. The shortened break duration from the request is *not* updated. However, the start time can change.
- If the shift in the shift optimization rule contains a different adjustable break from the flex time request or shift request and change, the adjustable break is removed.

Adjustable break activities are created when the **Allow Extensions** field is set to **Yes, treat as an adjustable break**. (This field is on the **Activity Details** page, under the **Request Management Usage** section.)

Shift optimization rules effect on gaps

After shift optimization runs on a request for an extension in a gap during the shift, the shortened gap and its start time are *not* changed. An exception to this behavior is if the extension starts at the beginning of a gap. In this case, the gap start time is different. Each split shift is optimized separately. A different shift optimization rule can be applied to each split.

In addition to shift/overtime gaps, you can have custom gap activities. These activities are created with the **Allow Extensions** field set to **Yes, treat as a shift gap**. (This field is on the **Activity Details** page, under the **Request Management Usage** section.)

An extension can be requested during either a shift/overtime gap or a custom gap activity in the following:

- Flex time requests
- Shift swap requests
- Swap postings to pick up a shift
- Shift requests and changes

In shift bidding requests, an extension can be requested only in a shift/overtime gap.

Conflict checking when a rule is created

When a shift optimization rule is created for an organization, the system checks to see if the new rule conflicts with an existing rule. A conflict occurs when the request type matches and the continuous shift length overlaps.

If the status of the existing rule is changed to inactive, another rule can be created in the same organization with a matching request type (or types) and an overlapping continuous shift length. If the status of the existing rule is changed back to active, the system identifies a conflict and prevents the status change.

Confidential and Proprietary Information of Verint Systems Inc.

Rule selection during the approval process

Both a parent organization and a sub-organization can create a rule with matching request types and overlapping shift lengths.

When a request is being processed for approval, the shift optimization rule created in the nearest organization to the employee's organization is selected. The selected rule could have been created in either the employee's organization or another organization higher in the organization scope tree.

Shift optimization process flow

After an administrator creates a shift optimization rule, all approved employee requests that add or remove time from a shift are eligible for the shift optimization process.

Stage	Description
1	The administrator creates a shift optimization rule for the Alpha organization that includes any or all request types.
2	An employee in the Alpha organization submits a request that adds or removes time from a shift.
3	The request is approved.
4	The system verifies that the shift assignment has shift events that can occur either *anytime* or *relative to the start of the shift*.
5	At this point, the system checks if the shift assignment is eligible for the shift optimization process, based on the definitions of the existing shift optimization rules. Under **Request Management** > **Shift Optimization**, the system verifies the following: 1. **Request Types**: Does the type of employee request to change the shift match one of the selected request types for the rule (**Shift Request & Change**, **Shift Bidding**, **Shift Swap**, and **Time Off / Flex Time**)? If yes, proceed to #2. 2. *Optional*. If **Time Off / Flex Time** is selected, does the *type* of time-off request in the employee request match the **Available Time Off Types** specified for the rule? If yes, proceed to #3. 3. Under **Optimization**, does the duration of the shift assignment match the duration specified in the rule? For example, if the shift is 6 hours, does the duration range in the rule include 6 hours? (such as 0:00-7:00)? If yes, proceed to the next step. If the answer to any of these questions is no, the shift assignment is *not* eligible for the shift optimization process. The current shift events in the shift assignment remain as is and are *not* optimized by the system.

Confidential and Proprietary Information of Verint Systems Inc.

Stage	Description
6	If the request types and shift duration range defined in the rule match the shift assignment, the system applies the shift events specified in the selected shift template for the rule in the following way: • If **Optimize non-working shift events (breaks) only** is selected, the system removes non-working shift events from the shift assignment, and applies the non-working shift events specified in the shift template to the shift assignment. • If **Optimize working shift events only** is selected, the system checks if the activities of the working shift events in the shift assignment are also defined in the shift template. If the activities are *not* defined in the template, *the system does not optimize these working shift events*. *The system leaves these working shift events in the shift assignment as is*. If the activities of the working shift events *are* included in the template, the system *merges* the working shift events in the shift assignment with any other working shift events defined in the template. The system first *removes* the event from the original shift, and then places it back into the shift in potentially a different time slot and order, according to the shift event rules. For example, it is possible that according to the rule, the event needs to be placed *on top of* another working shift event. However, the system *cannot* schedule two overlapping working shift events. Therefore, the solution is that the system *merges* these two working shift events together, which can be done by making one shift event shorter to fit in the other shift event. • If **Optimize non-working shift events (breaks) and working shift events** is selected, the system applies the shift optimization logic to both working and non-working shift events.
7	*Optional*. For shift assignments with working shift events and gaps (custom or system) that splits the shift into segments: For each activity associated with the working shift events, the system checks the activity parameter, **When the day contains multiple shift assignments** (under **Work Administration** > **Activities** > **Activities** > **Request Management Usage**): • If this parameter is set to **Do not optimize the activity**, the system does *not* optimize the working shift events associated with the activity. • If this parameter is set to *any other setting* (**Optimize the activity in the first shift**, **last shift**, **first and last shift**, or **Always optimize**), the system first checks to make sure that the shift template used to optimize each segment has the same shift event as the segments. If it does, the system removes the activity from all shift segments, and places the activity back in the defined shift segment (**first**, **last**, **first and last**, or **all**). If the shift template does *not* have the same shift event as the segments, it does not optimize the shift event in the segments.
8	The system: • Updates the shift assignment with the optimized shift events, and locks the shifts. • Adds a comment that describes the shift optimization action in the employee request.

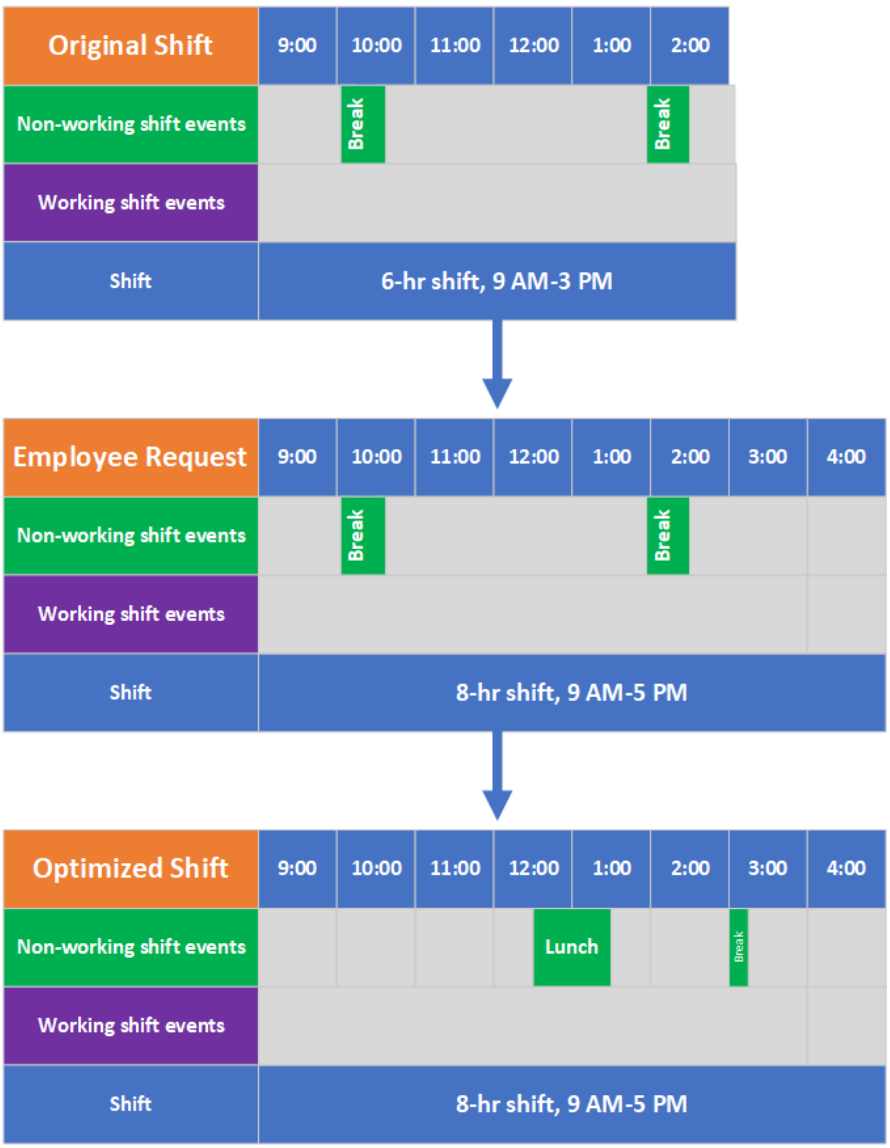
Shift optimization examples

Examples of the shift optimization process provide scenarios that are helpful in understanding how the system applies shift optimization rules to shift assignments.

Example: Shift optimization of non-working shift events

- The original shift is six hours long with two half-hour breaks.
- The employee submits a request to extend the shift by two hours (with no gap), making the shift 8 hours long.
- A shift optimization rule, called **8–9 hr shift**, defines that for shifts with a duration of 8-9 hours, the system should apply the breaks defined in the shift template, **Shift_8_hours_with_break**. The breaks defined in this template include an hour **Lunch** and a 15-minute **Break**.
- After the **8–9 hr shift** rule is applied, the updated shift:
  - Is eight hours long, from 9:00 AM - 5:00 PM
  - Has a **Lunch** shift event from 12:30-1:30 PM
  - Has a **Break** shift event from 3:00-3:15 PM

Confidential and Proprietary Information of Verint Systems Inc.



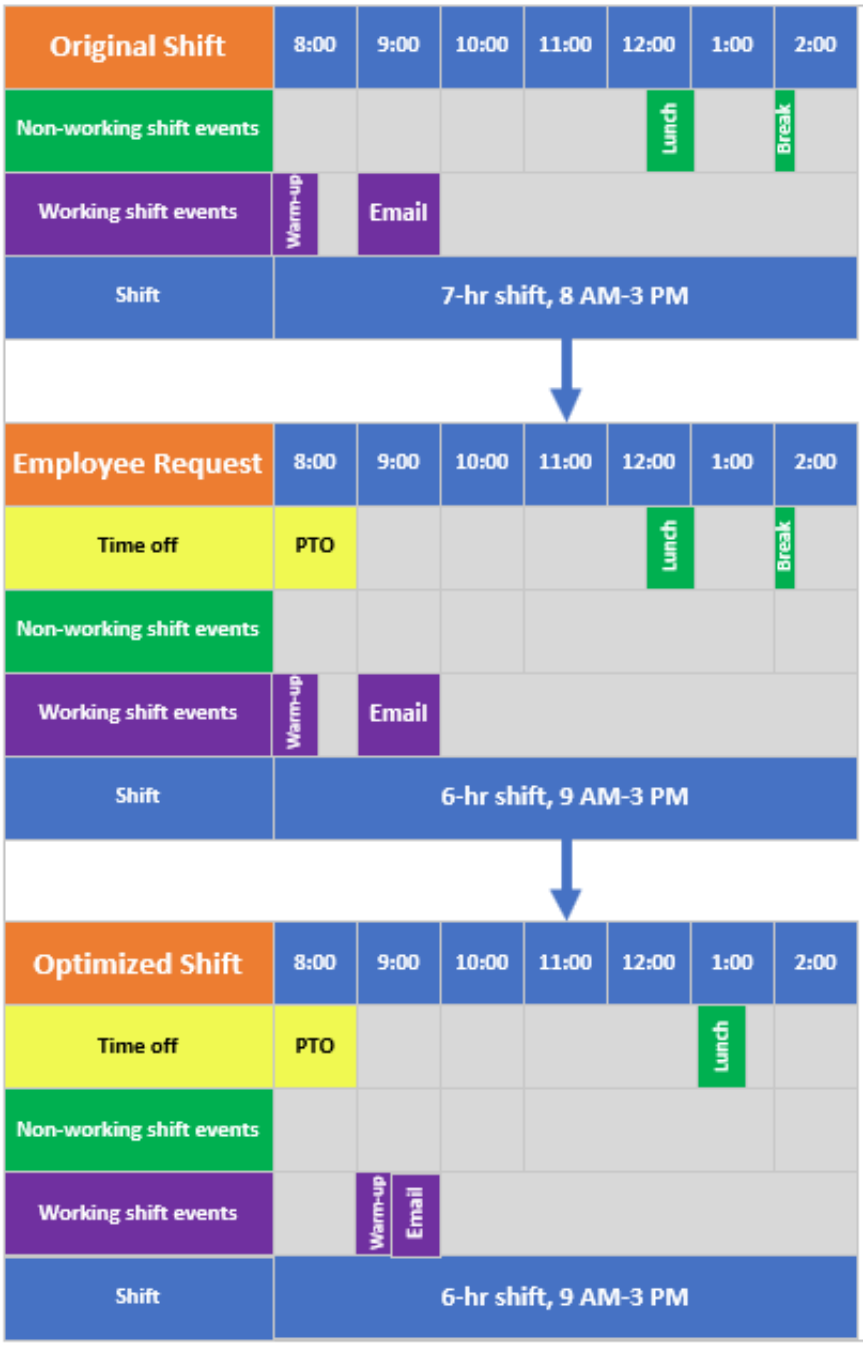
Confidential and Proprietary Information of Verint Systems Inc.

Example: Shift optimization of working shift events

- The original shift is seven hours long, from 8:00 AM - 3:00 PM. The activities in the original shift are the following:
  - 8:00-8:30: **Warm-up**, a working shift event.
  - 8:30-9:00: **Phone**, the primary activity of the shift.
  - 9:00-10:00: **Email**, a working shift event, added as an exception.
  - 10:00-12:30: **Phone**, the primary activity of the shift.
  - 12:30-1:00: **Lunch**, a non-working shift event.
  - 1:00-2:00: **Phone**, the primary activity of the shift.
  - 2:00-2:15: **Break**, a non-working shift event.
  - 2:15-3:00: **Phone**, the primary activity of the shift.
- The employee submits a request to include a time-off event from 8:00-9:00 AM.
- A shift optimization rule, called **6-hour shift**, defines that for shifts with a duration of 6 hours, the system should apply the shift events defined in the shift template, **Shift_6_hours**. The shift events defined in this template include the **Warm-up** working shift event at the beginning of the shift, and the non-working shift event, **Lunch**.
- After the **6-hour shift** rule is applied, the updated shift has the following activities:
  - 8:00-9:00: **PTO**, a time-off event.
  - 9:00-9:30: **Warm-up**, a working shift event.
  - 9:30-10:00: **Email**, a working shift event (exception from original shift).
  - 10:00-1:00: **Phone**, the primary activity of the shift.
  - 1:00-1:30: **Lunch**, a non-working shift event.
  - 1:30-3:00: **Phone**, the primary activity of the shift.

> There are no breaks in the optimized shift, because the shift template, **Shift_6_hours**, defines that for a 6-hour shift, no breaks are included.

Confidential and Proprietary Information of Verint Systems Inc.



Confidential and Proprietary Information of Verint Systems Inc.

Example: Shift optimization rules effect on gaps

- An original shift is 6 hours with a **Lunch** non-working shift event from 12:00-1:00 PM.
- An employee submits a request to extend the shift by two hours, and asks to include a 30-minute gap between the original shift and the extension.
- For the first 6-hour shift segment, the system applies the shift optimization rule, **6-hr shift**, which defines a shift template for shifts with a duration of six hours. This shift template includes a 30-minute lunch, which is now applied to the updated shift segment.
- For the second 2-hour shift segment, the system applies the shift optimization rule, **2-hr shift**, which defines a shift template for shifts with a duration of two hours. This shift template includes one 15-minute break, which is now applied to the updated shift segment.

Example: Time off request updated by a shift optimization rule

The employee's shift is four hours (1 PM - 5 PM) with a paid, 15-minute break.

Action by	Description
Employee	Employee requests two hours (3 PM - 5 PM) of vacation during this shift.
System	Removes the paid, 15-minute break. The employee must work four consecutive hours to receive a paid break.

Example: Shift Request & Change updated by a shift optimization rule

The employee's shift is four hours (8 AM - noon) with a scheduled paid, 15-minute break.

Action by	Description
Employee	Requests two more hours at the end of their shift. Total shift is six hours (8 AM - 2 PM).
System	Adds an unpaid, 30-minute lunch along with the already scheduled paid, 15-minute break.

Example: Shift Request & Change updated by shift optimization rule

The employee's shift is four hours (8 AM - noon) with a scheduled paid, 15-minute break.

Action by	Description
Employee	Requests an extra hour (7 AM - 8 AM) before their shift. The shift totals five hours (7 AM - noon).
System	The system does not change the breaks in the shift. The shift met the continuous shift length condition in the shift optimization rule; however, the shift template provides one paid, 15-minute break for a shift of five consecutive hours.
Then, employee requests another shift change.	
Employee	Requests two extra hours (noon - 2 PM) after the shift. The shift totals six hours (7 AM - 2 PM).
System	Adds an unpaid, 30-minute lunch in addition to the scheduled paid, 15-minute break.

Confidential and Proprietary Information of Verint Systems Inc.

Example: Shift request & change with working shift events updated by a shift optimization rule

The employee's shift is six hours (8 AM - 2 PM) with a scheduled paid, 15-minute **Email** working shift event at the beginning of the shift.

Action by	Description
Employee	Requests an hour of paid time off at the beginning of their shift, from 8 AM - 9 AM.
System	Verifies that the **Email** working shift event is defined in the shift template and is eligible to be optimized, and if it is, adds a paid time-off event from 8 AM - 9 AM, and schedules a 15-minute **Email** working shift event from 9:00-9:15 AM.

Example: Shift request & change updated by a shift optimization rule

The employee's shift is four hours (5 PM - 9 PM) with a scheduled paid, 15-minute break.

Action by	Description
Employee	Requests an extra two hours (9 PM - 11 PM) at the end of the shift. The shift totals six hours (5 PM - 11 PM).
System	Adds an unpaid, 30-minute lunch along with the already scheduled paid, 15-minute break.
Next, the employee submits a withdrawal request.	
Employee	Requests to withdraw the two hours (9 PM - 11 PM) from the shift. Now the shift totals four hours (5 PM to 9 PM).
System	Removes the unpaid, 30-minute lunch. Leaves the scheduled paid, 15-minute break.
Next, the employee creates a gap in the schedule.	
Employee	Requests four hours earlier on the same day (8 AM - noon) and keeps the four hours in the evening (5 PM - 9 PM).
System	Adds a paid, 15-minute break to the mornings shift (8 AM - noon). No changes are made to the shift from 5:00 PM and 9 PM.
Next, the employee fills the gap.	
Employee	Requests two more hours (noon - 2 PM) at the end of their morning shift and keeps the four hours in the evening. The first shift is now a total of six hours (8 AM - 2 PM).
System	Adds an unpaid, 30-minute lunch in addition to a paid, 15-minute break between 8 AM and 2 PM. No changes are made to the morning shift. It still has one paid, 15-minute break.

Create a shift optimization rule

Shift optimization rules specify where working or non-working shift events are automatically placed when a request that adds or removes time from a shift is approved. Depending on the rule definition, shift events can be automatically moved, added to, or removed from a shift.

After creating a rule, you can change the rule status to inactive by clearing the **Apply** check box on the **Shift Optimization list** page.

Show Me

Before you begin

Shift optimization rules overview (page 178)

Procedure

1. Go to **Organization Management**. Under **Request Management**, select **Shift Optimization**.
2. From the left pane, select an organization.
3. Select **Create New Rule**.
4. In the **Rule name** field, enter a name for the rule.

   For example, **Time_off_max_6_hours**.
5. Under **Request Types**, select the request types to which the rule applies.

   For example, if you want the rule to apply to shift bidding and shift request & change requests, select **Shift Request & Change** and **Shift Bidding**. You can optionally select **Include Withdrawal** for the relevant requests.
6. *Optional*. If you selected **Time Off/Flex Time**, select one or more time-off types Under **Available Time Off Types**. The rule only applies to these specific time-off request types.
7. Under **Optimization**, define the duration range of the shift assignment to which the rule applies.

   For example, if you want the rule to apply to all shifts with a duration of 8 or 9 hours, enter 8:00-9:00 in this field.

   > If there are rules with adjacent durations, the system applies the rule that matches the duration of the shift *or longer* (not shorter).
   >
   > For example, the approved shift request is 2 hours. There is a rule for a duration of 1-2 hours, and a rule with a duration of 2-4 hours. In this case, the system uses the rule with a duration of 2-4 hours.

8. In the **use shift** field, select the shift template for which you want the shift events in the template to be applied to the relevant shift assignment.

   > Shifts with absolute breaks and custom gaps *cannot* be used as shift templates. Therefore, these shifts do *not* appear in the **use shift** field.

9. Under **Shift event optimization**, select one of the following:

Confidential and Proprietary Information of Verint Systems Inc.

a. **Optimize non-working shift events (breaks) only**: If there are *non-working* shift events in the shift template, the system optimizes these shift events into the shift assignment.

b. **Optimize working shift events only**: If there are *working* shift events in the shift template, the system optimizes these shift events into the shift assignment.

c. **Optimize both non-working and working shift events**: If there are both working and non-working shift events in the shift template, the system optimizes all of these shift events in the shift assignment.

> ⚠ If there are working shift events in the shift assignment that are *not* in the shift template, the system does *not* optimize these events. *Working shift events that are in the shift assignment must be part of the shift template for the system to optimize them*.

10. Under **Apply to sub-orgs**, select one of the following:
    - **Apply to this org only**: Rule applies *only* to the selected organization, and not to its suborganizations.
    - **Apply to sub-orgs (no override)**: Rule applies to the organization and its suborganizations. Users associated with the suborganizations *cannot* update the rule.
    - **Apply to sub-orgs (allow override)**: Rule applies to the organization and its suborganizations. Users associated with the suborganizations can change whether the rule applies to their organization, but they *cannot* update it.

Shift optimization examples (page 184)

Shift optimization rule fields

The fields on the Shift Optimization page allow you to create and specify the parameters for the rule.

Setting	Description
Rule name	Descriptive name of the rule.
Request types	Identifies the request types to which the rule applies. Values include: • **Shift Request & Change** • **Shift Bidding** • **Shift Swap** • **Time Off / Flex Time**
Available Time Off Types	If you selected **Time Off/Flex Time** for a request type, indicates the time-off types that are affected by the rule.

Confidential and Proprietary Information of Verint Systems Inc.

Setting	Description
Optimization	Specifies the following for the rule: • **Duration**: Range of the length of the shift assignment to which the rule applies. For example, if you want the rule to apply to all shifts with a duration of 8 or 9 hours, enter 8:00-9:00 in this field • **Use shift**: Shift template for which you want the shift events in the template to be applied to the relevant shift assignment. When selecting a shift in the **Use shift** field, shifts that contain custom gaps or absolute shift events do *not* appear in the list.
Shift event optimization	Indicates the type of shift events (working or non-working) that the system optimizes for the shift assignment: • **Optimize non-working shift events (breaks) only**: If there are *non-working* shift events in the shift template, the system optimizes these shift events into the shift assignment. • **Optimize working shift events only**: If there are *working* shift events in the shift template, the system optimizes these shift events into the shift assignment. • **Optimize both non-working and working shift event**: If there are both working and non-working shift events in the shift template, the system optimizes all of these shift events in the shift assignment.
Apply to sub-org	The following options are available: • **Apply to this org only**: Rule applies only to the selected organization, and not to its suborganizations. • **Apply to sub orgs (no overrides)**: Rule applies to the organization and its suborganizations. Users associated with the suborganizations *cannot* update the rule. • **Apply to sub orgs (allow overrides)**: Rule applies to the organization and its suborganizations. Users associated with the suborganizations can change whether the rule applies to their organization, but they *cannot* update it.

Shift optimization list page

On this page, you can manage actions related to shift optimization rules. Shift optimization rules can be created for all request types.

You can do the following:

- Access the rule form to create a rule or edit an existing rule.
- Change the rule from active to inactive for an organization.
- Delete a rule.

Column	Description
Apply	Indicates whether the shift optimization rule applies to an organization. When the checkbox is *not* selected, the rule is inactive.
Name	Name of the shift optimization rule. For example, **Time_off_max_6_hours**
Request Type	Identifies the request types to which the rule applies. Values include: • **Shift Request & Change** • **Shift Bidding** • **Shift Swap** • **Time Off / Flex Time**
Optimize	Indicates the type of shift events (working or non-working) that the system optimizes for the shift assignment: • **Optimize non-working shift events (breaks) only**: If there are *non-working* shift events in the shift template, the system optimizes these shift events into the shift assignment. • **Optimize working shift events only**: If there are *working* shift events in the shift template, the system optimizes these shift events into the shift assignment. • **Optimize both non-working and working shift event**: If there are both working and non-working shift events in the shift template, the system optimizes all of these shift events in the shift assignment.
From, To	Indicates the range of the duration of the shift assignment to which the rule applies. For example, if **From** is 0:00 and **To** is 9:00, the rule applies if the shift assignment is a maximum of 9 hours long.
Shift	Shift template used for the placement of working and non-working shift events in the shift assignment.

Confidential and Proprietary Information of Verint Systems Inc.

Column	Description
Owner Organization	Organization to which the rule is assigned. Only users assigned to this organization can edit the rule.
Apply to sub-orgs	Indicates whether the rule applies to suborganizations and whether they can override the rule: • **Apply to this org only**: Rule applies only to the selected organization, and not to its suborganizations. • **Apply to sub orgs (no overrides)**: Rule applies to the organization and its suborganizations. Users associated with the suborganizations *cannot* update the rule. • **Apply to sub orgs (allow overrides)**: Rule applies to the organization and its suborganizations. Users associated with the suborganizations can change whether the rule applies to their organization, but they *cannot* update it.

Chapter 9

Running a shift bidding auction

Using an auction for shift bidding lets employees submit bids for the shifts they prefer. Employee bids can be prioritized based on various criteria including a scoring system of accrued points.

Topics

Recommended workflow: Run a shift bidding auction 196

Shift bidding auction options 197

Create a shift bidding auction 199

Add employees to an auction one after another 209

Add employees to an auction at the same time 211

Remove an employee from an auction 214

Update an auction schedules and employee list 215

Set auction template options 216

Close a shift bidding auction 226

Delete a shift bidding auction 227

Recommended workflow: Run a shift bidding auction

With shift bidding, employees can bid on the shifts that they prefer to work. You can factor in seniority, rank, and bonus points so certain employees are more likely to get their preferred shifts.

This workflow shows the process for running a shift bidding auction.

Workflow

1. Create a shift bidding auction (page 199)

   Using an auction for shift bidding lets employees submit bids for the shifts they prefer. Employee bids can be prioritized based on various criteria including a scoring system of accrued points.

2.

3. Add employees to an auction using one of the following methods:
   - Add employees to an auction one after another (page 209)

     To give some employees an advantage in shift bidding, you can automatically add employees to the auction one after another based on a specified order. The employees at the top of the sort order have the opportunity to submit their shift bid before employees lower in the sort order.
   - Add employees to an auction at the same time (page 211)

     Use this method to add waiting employees to an auction when you want all employees to have equal opportunity to bid on schedules. The employee whose bid is approved first, gets the schedule. Any other bids for the same schedule become an invalid request.
4. Approve all shift bid requests without violations (page 270)

   You can automatically process and approve all shift bid requests. During processing, the first request without a violation is approved. Only one shift bid can be approved for an employee.
5. Close a shift bidding auction (page 226)

   After bids have been approved and no additional bidding is needed, the auction can be closed. Closing the auction removes shifts that have been rewarded from the phantoms in the scheduling calendar.
6. Delete a shift bidding auction (page 227)

   After an auction is closed, you can delete it. Also, you can use this feature to delete an auction that was not configured correctly.

Confidential and Proprietary Information of Verint Systems Inc.

Shift bidding auction options

For the same scheduling period, you have the option of creating a single auction, repeating auctions, continuous bid auctions, or concurrent auctions.

Single auction

- Description: After the bid deadline passes, employees can no longer bid unless the deadline is extended.
- Available to: All auctions (auctions for full period schedules, combination of individual shifts, and multiple shifts per day)
- Required setup: Basic auction setup

Repeating auctions in the same scheduling period

- Description: If the previous auction for the scheduling period is closed with no pending requests, you can create another auction for the scheduling period previously used. After being scheduled, employees can bid again for more hours.
- Available to: Multiple shifts per day auctions
- Required setup: Auction must include the **Previously Scheduled Employees** option.

Continuous bid auction

- Description: Employees can continue to bid on available shifts and have multiple bids approved until their deadline passes. One bid per employee may be approved per group approval action to ensure that shift selections are evenly awarded.
- Available to: Combination of individual shifts auctions and multiple shifts per day auctions
- Required setup: Auction must include the **Previously Scheduled Employees** and **Continuous Bid** options.

Concurrent auctions in the same scheduling period

- Description: You can create auctions in the same schedule period that are open at the same time. Concurrent auctions have the following benefits:
  - Employees who are bidding only view the schedules in the auction they are in.
  - Employees who are processing requests can create a Shift Bidding filter for the Employee Requests page that only shows the selected auctions.
- Available to: Auctions for full period schedules
- Required setup: Concurrent auctions must have either a unique selection for Organization(s) or Employee Type. If you create a subsequent auction for a scheduling period and either the selected organizations or employee types overlap with an existing auction, you cannot save the new auction.

Create a shift bidding auction

Using an auction for shift bidding lets employees submit bids for the shifts they prefer. Employee bids can be prioritized based on various criteria including a scoring system of accrued points.

You can create a basic auction by completing a few fields. Multiple options are available for adding features to your auction. Some options are available based on the type of bids allowed in the auction.

After every bid request by an employee is approved, the employee's schedule for the duration of the scheduling period is published.

Before you begin

- Your scheduler must create a campaign with future unassigned scheduling periods. The campaign must include the organization with the employees that you want to include in the auction.
- The scheduler also needs to create phantom schedules on which employees can bid in the auction.
- Complete the set-up for shift bidding auctions (see Recommended workflow: Set up shift bidding requests (page 124)).
- Review the shift bidding auction options (see Shift bidding auction options (page 197)).
- If your plan to create an auction for either a combination of individual shifts or multiple shifts per day, make sure that you are familiar with how the combination of the following two settings can affect whether an employee can bid for additional shifts: **Consecutive Working days** and **Include Previously Scheduled Employees**. Before bidding starts, you can check and resolve the issues for these employees to bid more (see Schedule Auctions: Settings page (page 201)).

Procedure

1. Go to **Request Management**. Under **Schedule Auctions**, select **Settings**.
2. Complete the **General Settings**:
   a. **Auction Name**: Type a descriptive name for your auction.
   b. **Schedule Period**: Click a choice.
   c. **Bidding For**: Click to choose another option.
   d. **Deadline**: Select the auction ending date and time.
   e. Optional: Complete other auction settings to add features to the auction such as **Use Scoring**.
3. Complete the **Employee Display Settings**.
   a. Optional: **Bid Approval Order**: Select to specify the sort order of bids for employees.
4. Click **Save**.

Schedule Auctions: Settings page

Use this page to create, view, or modify Shift Bidding Auction settings.

Setting	Description
General Setting	
Auction Name	Name of the auction. From the **Auction Name** column, auctions are sorted by scheduling period, from the future to the past in descending order. For example, the first auction in the list has a scheduling period of 12/1/2025-12/8/2025, the second auction has a scheduling period of 11/17/2025-11/24/2025, and the last auction has a scheduling period of 10/20/2025-10/27/2025. The sort order allows you to prioritize the most recent auctions first.
Status	Indicates whether the auction is open or closed. If the status is **Closed**, employees cannot submit bids for the auction.
Schedule Period	Campaign and schedule period for the auction.
Bidding For	Indicates the type of bids accepted in the auction. Some of the fields on this page change based on which Bidding for option is selected. Options: • **Full Period Schedules**(Default): Schedule templates are fixed for working and non-working days for the entire period. Employees cannot create a custom schedule for the scheduling period. For the following auction types, more setup options are available. The auction can be set up for the current scheduling period, and for continuous bidding. • **Combination of Individual Shifts**: Schedule templates are for single days. The user can create a custom schedule. • **Multiple Shifts per Day**: Schedule templates are for single shifts on a day where a day can include more than one shift. The user can create a custom schedule by selecting multiple shifts for a day and selecting different working times for each day of the schedule period.
The **Organizations** and **Employee Type** options are available if the **Bid For** selection is Full Period Schedules. Either the organization, employee type, or both must be specified when setting up concurrent auctions in the same schedule period. The All setting cannot be used for both fields.	

Confidential and Proprietary Information of Verint Systems Inc.

Setting	Description
Organizations	Organizations included in the auction. Can be used to limit which organizations are in the auction. Options: • All (organizations) • Specific organizations from the list Initially, only organizations in the selected Schedule Period are in the list. After an organization is selected, suborganizations that are in the selected Schedule Period are added to the list and included in the auction. If suborganizations are in your list but are not indented under their parent organization, you can update your preferences to show organizations in a hierarchical order. (Go to **My Preferences**. Under **General**, select **User Interface Settings**.)
Employee Type	Employee types included in the auction. Can be used to limit which employee types are in the auction.
Deadline	Date and time when the auction is over.
None Approved Bonus	Bonus points assigned to employees who have placed bids on this auction but did not get any of their requests approved.
Scoring System	**Use Scoring** check box Specifies whether employees can use accumulated points for this auction. When selected, employees can use their points when placing a bid to improve their Bid Rank.
By Organization	**Employees can bid only on their organization schedules** check box. If selected, employees can bid only on their organization schedule.

Confidential and Proprietary Information of Verint Systems Inc.

Setting	Description
By Skills	**Employees can bid only on schedules for which they have** drop-down list. Specifies the skill requirements for employees who are bidding on schedules: • **The same skills**: Employees can only bid on schedules for which they have the *exact same skills*. Employees can view the bid options if they have the *exact* required skills to work on the schedule. If they have more or less skills than what is required for the schedules, they will *not* see the bid options. • **Sufficient skills**: Employees can only bid on schedules for which they have *sufficient* skills. Employees can view the bid options if they have the required skills to work on the schedule. They can have *more* skills than what is required for the schedules, but not less. After the auction is created and saved, you *cannot* modify this setting.
Paid Hours Per Day	This check box is available if the **Bidding For** selection is **Multiple Shifts per Day.** If this check box is selected and minimum and maximum hours are specified, employees can bid on shift blocks that fall within the paid hours range. Example: If the minimum is set to 4 and the maximum is set to 8, employees can bid on shift blocks that fall within this range. They are not allowed to bid on shift blocks that total 10 paid hours in a day.
Shift Blocks Per Bid	This check box is available if the **Bidding For** selection is **Multiple Shifts per Day**. If this check box is selected and a maximum number of shift blocks is specified, employees can bid on shift blocks in a bid until they reach the maximum number specified.
Multi-bid Submission	**Requires a minimum number of schedules available** check box plus **Bid Approval Order by Rank** list box. If this check box and a value are selected, the bids by this employee (or for this employee) cannot be submitted until the minimum number of schedules have been selected. This minimum number of schedules is based on either their Bid Approval Order by Rank alone (value=0) or their Bid Approval Order by Rank plus a number (value =1–9). If multi-bid submission is used, employees create their bids on the My Bid Options page instead of the Shift Bid Request form. If a minimum number of schedules is required, employees cannot use bonus points in their bids.

Confidential and Proprietary Information of Verint Systems Inc.

Setting	Description
Update Schedule	Locks the phantom schedules on the Calendar that are included in the auction, before updating the auction schedules. Selecting this option allows you to add more phantom schedules to the auction *without affecting the existing phantoms*. When you generate the schedule to create more phantoms to add to the auction, the existing locked phantom schedules are *not* affected. (They are *not* changed, or optimized, in any way, by the scheduling engine.) After you save the auction, you can *no* longer update this setting.
Dynamic Ranks	Determines the effective date by which an employee's rank for an auction is based: • **Scheduling Period start time** (default): An employee's rank for an auction is based on the employee's rank at the start date and time of the scheduling period. • **Current time**: An employee's rank for an auction is based on the employee's current rank. This setting can be updated after the auction was created.
Combine Shifts	For **Multiple Shifts Per Day** auctions, this setting determines whether shifts that are adjacent to each other that cross the day boundary are combined into one shift. For example, an employee has one shift on 12/5 from 10:00 PM - 12:00 AM, and another shift on 12/6 from 12:00 AM - 2:00 AM. Note the following: • If this setting is enabled (the default setting), the system treats this as one shift. The shift starts on 12/5 at 10:00 PM, and ends on 12/6 at 2:00 AM. Features like shift optimization can be applied to this shift. • If this setting is *not* enabled, the system treats the shift from 10:00 PM - 12:00 AM on 12/5 as one shift that starts and ends on that day. The shift from 12:00 AM - 2:00 AM is a separate shift that starts and ends on 12/6.

Confidential and Proprietary Information of Verint Systems Inc.

Setting	Description
Group Bid Options	**Available grouping options**: Defines the grouping options that are available for employees to select from the Bid Options page. This setting guides the employees who are participating in the auction to select the most applicable and usable grouping for the auction. You can select multiple options for this list, and you must select at least one option. Options include: • **No grouping**: Bid options are listed individually and *not* grouped. *They are only grouped if all shift events for all shifts are identical*. • **Similar schedule**: Bid options are grouped if the shift start time and end time are the same for all days, and the schedule has the same non-working days. • **Similar schedule and primary activity**: Bid options are grouped if the shift start time and end time are the same for all days, the schedule has the same non-working days, and shifts have the same primary activity. • **Similar schedule and organization**: Bid options are grouped if the shift start time and end time are the same for all days, the schedule has the same non-working days, and the organization is the same for all schedules. • **Similar schedule, primary activity and organization**: Bid options are grouped if the shift start time and end time are the same for all days, the schedule has the same non-working days, shifts have the same primary activity, and the organization is the same for all schedules. If the setting, **Organization(s)** is set to a specific organization (and not set to **All**), and if the **By Organization - Employees can bid only on their organization schedule** is selected, the following grouping bid options are *not* available for selection: • **Similar schedule and organization** • **Similar schedule, primary activity and organization** **Default grouping option**: Defines the grouping option that is selected by default for employees from the Bid Options page. You can only select one default option. After the auction is created and saved, you *cannot* modify these settings.

Confidential and Proprietary Information of Verint Systems Inc.

Setting	Description
Consecutive Working Days	This check box is available if the **Bidding For** selection is either **Combination of Individual Shifts** or **Multiple Shifts per Day.** If this check box is selected and a maximum number of consecutive working days is specified, employees can bid until they reach the maximum number of consecutive work days specified. The maximum consecutive workdays are exceeded in the following scenarios: • The bid includes a shift on the *first* day of the org week, and the approved shifts in the week before the bid together with the added days from the bid exceeds the maximum days limit. • The bid includes a shift on the *last* day of the schedule period, and the number of consecutive days in the week following the bid together with the added days from the bid exceed the maximum days limit. • If *any* time period within the scheduling period used for the auction exceeds the maximum consecutive days regardless of the day selected in the bid request. • If the **Include Previously Scheduled Employees** check box is also selected, any existing scheduled days within the scheduling period greater than the specified maximum consecutive workdays are considered a violation regardless of the day included in any bid. If the maximum number of consecutive work days is exceeded, the bid cannot be saved.
Include Previously Scheduled Employees	This check box is available if the **Bidding For** selection is either **Combination of Individual Shifts** or **Multiple Shifts per Day**. When this check box is selected, employees who already have scheduled shifts can bid in the auction.
Continuous Bid	This check box is available if the **Include Previously Scheduled Employees** option is selected. When this check box is selected, employees in the auction can continue to bid on available shifts and have multiple bids approved until their bidding deadline has passed. One bid per employee can be approved per group approval action to ensure that shift selections are evenly awarded.
Employee Display Settings	

Confidential and Proprietary Information of Verint Systems Inc.

Setting	Description
Bid Approval Order	**Display based on** check box and bid approval order list box If this check box and a bid order value are selected, employees can view their ranking in the bid approval order on their **My Bid Options** page. Example: Bid Approval Order: You are 2 of 20 The **Score** option is included when **Use Scoring** is selected. If the **Require a Minimum Number of Schedules Available** check box is selected, the bid approval order option is set to Rank and cannot be changed. This check box is on the **Setting** page, under the **General Settings** section. This page is on **Request Management**, under **Schedule Auctions**.

Add employees to an auction one after another

To give some employees an advantage in shift bidding, you can automatically add employees to the auction one after another based on a specified order. The employees at the top of the sort order have the opportunity to submit their shift bid before employees lower in the sort order.

Processing overview

1. The employee at the top of the sort order is sent an alert message. It notifies them that they are in the auction and provides their bid deadline.
2. After this employee's shift bid is either approved or the maximum time period to place a bid has expired, the next employee is added to the auction. This employee is sent a message with the same information as the first employee.
3. Unless you stop the serial add, the process continues until all designated employees have been added. The designated employees are based on which **Add** option was selected: **Only Selected and Waiting** or **All Waiting**.

Alternate method to add employees

If you prefer, you can add employees to an auction at the same time.

Before you begin

- Create a shift bidding auction (page 199)
- Create an autoprocessing rule for shift bidding requests (page 132)

Procedure

1. Go to **Request Management**. Under **Schedule Auctions**, select **Employees**.
2. In the left pane, select an auction.
3. Optional: In the lower-left corner of this pane, change the number of employees displayed on a page.
4. Decide how many waiting employees you want to add, and do one of the following:
   - To add individual employees, select one or more employees. If needed, click the right arrow to move to other pages and locate the employees.
   - To add all employees, no action is needed.
5. Click **Add Serially**.
6. Complete the **Add Serially** window.
   a. From the **Add** list, do one of the following:
      - If you are adding individual employees, click **Only Selected and Waiting**.
      - If you are adding all employees, click **All Waiting**.
   b. From the **Order** list, click a sort order.
   c. Type the number of **Time Interval** minutes.
7. Click **Save**.

Confidential and Proprietary Information of Verint Systems Inc.

- The **Employees page** is displayed and the **Add Serial** button has changed to **Stop Serialized Add**.
- The serial add begins.
  - When you chose **All Waiting**, the serial add begins for all waiting employees on all pages.
  - When you chose **Only Selected and Waiting,** the serial add begins for employees that meet this criteria on the current page.

8. Optional: To stop adding these employees, click **Stop Serial Add** and click **Yes** to the confirm this action.

   To restart the process, click **Add Serially** again.

Add employees to an auction at the same time

Use this method to add waiting employees to an auction when you want all employees to have equal opportunity to bid on schedules. The employee whose bid is approved first, gets the schedule. Any other bids for the same schedule become an invalid request.

Alternate method to add employees

You can add employees to an auction one after another.

Before you begin

- Create a shift bidding auction (page 199)
- Create an auto-processing rule to define criteria for automatic approval of shift bids. Otherwise, bids must be approved manually which is time consuming.

  Create an autoprocessing rule for shift bidding requests (page 132)

Procedure

1. Go to **Request Management**. Under **Schedule Auctions**, select **Employees**.
2. In the left pane, select an auction.
3. Optional: In the lower-left corner of this pane, change the number of employees displayed on a page.
4. Decide how many waiting employees you want to add, and do one of the following:
   - To add individual employees, select one or more employees. If needed, click the right arrow to move to other pages and locate employees.
   - To add all employees, no action is needed.
5. Click **Add to Auction**.
6. Complete the **Add to Auction** window.
   a. From the **Add** list, do one of the following:
      - If you are adding individual employees, click **Only Selected and Waiting**.
      - If you are adding all employees, click **All Waiting**.

   b. Enter the **Deadline**.
7. Click **Save**.
   - When you chose **All Waiting**, all waiting employees on all pages are added.
   - When you chose **Only Selected and Waiting**, all employees that meet this criteria on the current page are added.

Employees page

Use this page to add or remove employees from an auction, submit a shift bid request for an employee, and withdraw an approved shift bid request.

Left pane

This pane lists open auctions.

Right pane

This pane lists all employees in the scheduling period.

Column	Description
Name	Name of the employee.
Status	Indicates one of the following: • **0 Bids**: Employee has been added to the auction, but has not submitted any bids. • **<number> Bids**: Employee is in the auction and has submitted <number> of bids. • **Waiting**: Employee is not in the auction. Either the employee was not added to the auction or the employee was removed from the auction. • **Scheduled**: Employee has an approved shift bid request.
Seniority	Date the employee was hired.
Rank	Value between 1 and 9,999, which is assigned to the employee's profile in the **User Management** module (under **Employees**, **Profiles**).
Points	Points accumulated by the employee.
Bonus	The bonus, if any, assigned to the employee for the auction.
Deadline	Date and time the bid must be submitted.

In the lower-left corner, you can see how many employees are on the current page out of the total number of employees in the list. With the up and down arrows, you can change the number of employees displayed on a page. With the left and right arrows, you can page forward and backward.

Update an auction schedules and employee list

When changes to schedules or employees in the scheduling period occur after an auction is created, you can update the auction.

> If phantom schedules on the Calendar are locked by selecting the auction setting, **Update Schedule**, the previously locked phantoms are *not* affected when the schedule is generated and the system adds more phantoms. In addition, saved shift bidding requests and preferences are also *not* affected.
>
> If phantom schedules are *not* locked, phantom schedules are affected when the schedule is generated and the system adds more phantoms.
>
> If phantom schedules are locked *but you manually change or delete* the locked phantom schedules, saved shift bidding requests become invalid and bid preferences are deleted.

Before completing this update, a message provides the number of bids and preferences that are affected. You can decide whether to continue with the update.

Procedure

1. Go to **Request Management**. Under **Schedule Auctions**, select **Schedules**.
2. In the left pane, click an auction.
3. Click **Update Schedules**.
4. Do one of the following:
   - To update, click **OK**.
   - To stop the update, click **Cancel**.

Confidential and Proprietary Information of Verint Systems Inc.

Set auction template options

After creating a shift bidding auction, you can update specific settings for templates associated with the auction. These settings include updating a description for templates, updating the total number of available bid options for templates, and defining bonus points for a template.

> Updating these settings is optional.

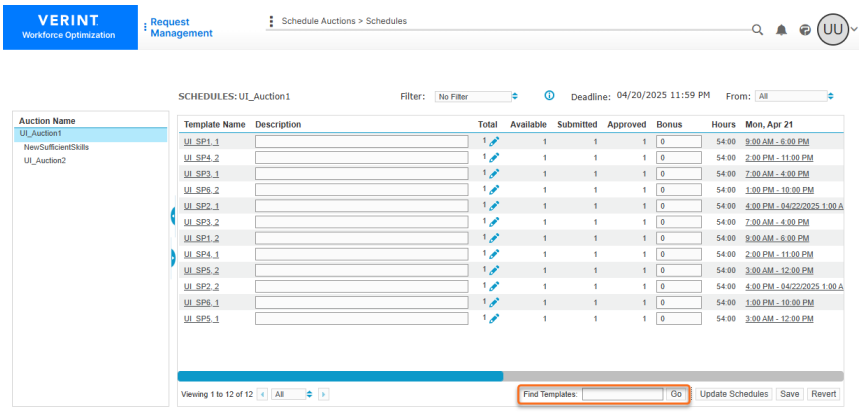
Before you begin

Create a shift bidding auction (page 199)

Procedure

1. Go to **Request Management**. Under **Schedule Auction**, select **Schedules**.
2. From the **Auction Name** column, select the name of an auction.
3. To search for a specific template, in the **Find Templates** field, enter the template name and select **Go**.

   The system only displays templates that contain the entered text.

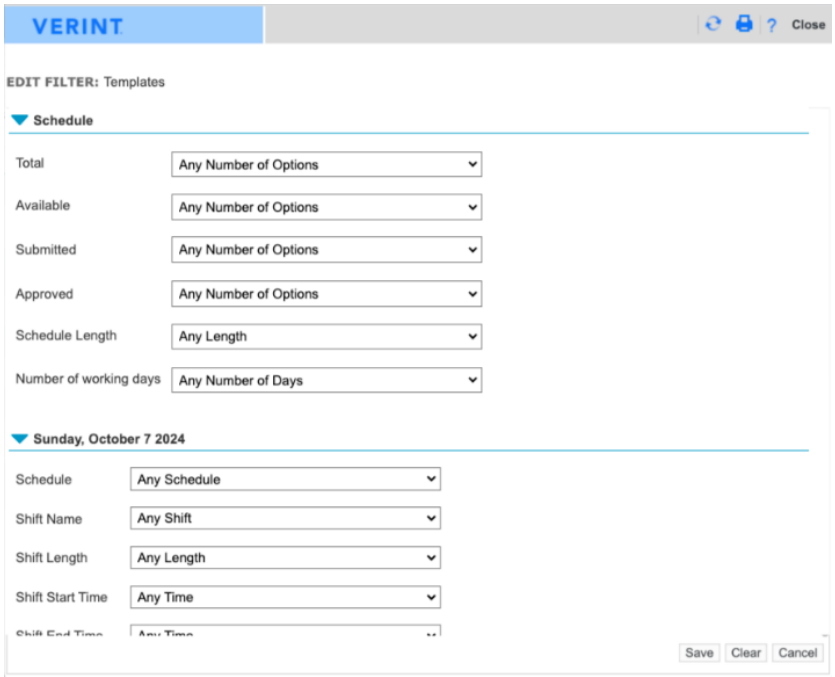


4. To filter the templates according to the values of specific attributes:

Confidential and Proprietary Information of Verint Systems Inc.

a. From the **Filter** field, select **Create Filter**.

b. On the **Edit Filter** screen, set the filters you want to display specific templates, and select **Save**.



5. In the **Description** column, type a description for any template.

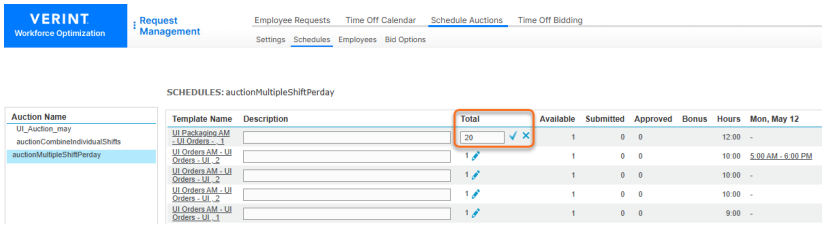
   A template description provides information that can help employees identify a shift or schedule they want to bid on. These descriptions are available to anyone creating a bid (including employees creating their own bids or by anyone creating a bid for an employee).

6. From the **Total** column, you can increase or decrease the total number of bid options for the selected template. When you *increase* this value, new phantoms are created in the scheduling period and are added to the auction. When you *decrease* this value, existing phantoms are deleted and removed from the auction.

   To increase or decrease the total number of bid options:

   a. Select the pencil icon and update this value for the selected template. This value includes both assigned and unassigned phantom schedules.

   b. To save the updated value, select the check icon .



Confidential and Proprietary Information of Verint Systems Inc.

> When the total number of bid options for the template have been assigned to employees (approved requests), the bid options are *not* removed from the table. The bid options are still displayed, serving as a way to monitor the assignment of bid options.
>
> Bid options are only removed from the table when the associated phantom schedule is removed from the scheduling period, and the auction schedule is updated.

7. In the **Bonus** column, enter the number of bonus points you want to assign to the template.

   To encourage employees to bid on unpopular schedules, you can specify bonus points associated with them. These points give the employees a bidding advantage in future auctions.
8. To save your changes, select **Save**.

Schedules list page

On the Schedules list page, you can view the schedules associated with a shift bidding auction, update a description for the templates, update the total number of bid options for the selected template, and assign bonus points to a schedule.

Schedules are only displayed if they contain phantom shift assignments.

Column	Description
Template Name	Name of the template. The link provides information about the required skills.
Description	Provides information that can help employees identify a shift or schedule on which they want to bid. These descriptions are available to anyone creating a bid (including employees creating their own bids or by anyone creating a bid for an employee). The **Description** column is available when the Bid Options setting **Display template description column** is selected for one or more organizations in the auction. (This setting is defined in **Organization Management**, under **Request Management**, and **Settings**.)

Confidential and Proprietary Information of Verint Systems Inc.

Column	Description
Total	Total number of bid options for the selected template. This value includes both assigned and unassigned phantom schedules. Note the following: • You can add or subtract up to 1,500 bid options from the current total number of bid options. For example, if there are 100 bid options for a template, you can set the total number of bid options up to 1,600 (but not more than that). • If you enter a zero (0) value in this field, all phantom schedules for the template will be deleted and the bid options are removed from the table. • You *cannot* set a value in this field that is *lower* than the number of approved bid options for the template. (The approved bid options have already been assigned to employees.) When the total number of bid options for the template have been assigned to employees (approved requests), the bid options are *not* removed from the table. The bid options are still displayed, serving as a way to monitor the assignment of bid options. Bid options are *only* removed from the table when the associated phantom schedule is removed from the scheduling period, and the auction schedule is updated.
Available	Number of available phantom schedules on which employees can submit bids.
Submitted	Number of employees who submitted a bid request for the template. If an employee submitted multiple requests with the same template, they are counted once and *not* multiple times.
Approved	Number of bid requests that are approved for the template. This value equals the value in the **Total** column, minus the value in the **Available** column.
Bonus	Bonus points awarded for working this shift/schedule. This box is available even in auctions where Use Scoring is not available. This way, employees can accumulate points for future use.
Hours	Total number of hours in the template.
(*remaining columns*)	Starting with the current day, shows the shift start and end time for each day. What is displayed in each column depends on which of the following auction shift types is used: • A schedule for the full schedule period • A combination of individual, different shifts for the schedule period • Multiple shifts (blocks) per day

Schedules filter settings (page 220)

Schedules filter settings

When creating a filter to exclude specific templates from the Schedules table, define specific filter settings.

Field	Description
Schedule	
Total	Total number of bid options for the selected template. This value includes both assigned and unassigned phantom schedules. Filter by: • Any Number of Options • Equal To • No More Than • No Less Than • Between
Available	Number of available phantom schedules on which employees can submit bids. Filter by: • Any Number of Options • Equal To • No More Than • No Less Than • Between
Submitted	Number of employees who submitted a bid request for this bid option. Filter by: • Any Number of Options • Equal To • No More Than • No Less Than • Between

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Approved	Number of bid requests that are approved for the template. This value equals the value in the **Total** column, minus the value in the **Available** column. Filter by: • Any Number of Options • Equal To • No More Than • No Less Than • Between
Schedule Length	Length (in hours) of a particular template. When selected, you can set the length according to time or paid hours. Filter by: • Any Length • Equal To • No More Than • No Less Than • Between
Number of working days	Number of working days in the schedule. The values include: • Any number of days • Equal to / Days • No more than / Days • No less than / Days • Between / Days For example, to select all schedules with no more than 4 working days, select **No more than** from this drop-down list, and then enter **4** in the **Days** field. To select all schedules that have between 2 and 4 working days, select **Between**, and then enter **2–4 Days**.
<Days in the auction> - You can set unique filter settings for each day in the auction. The following settings are available for each day:	

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Schedule	Defines the type of schedule on a defined day: • **Any schedule**: Defines that this date can either be a working day or day off. • **Working day**: Defines that this date must be a working day in the schedule. • **Day off**: Defines that this date must be a day off in the schedule. This setting allows you to filter the list according to the type of schedule on each day. For example, you can define that you only want to see working day schedules on 01/01/2024, day off schedules on 01/02/2024 and all types of schedules on 01/03/2024.
Shift Name	Name of the shift assigned to the biddable schedule.
Shift Length	Length (in hours) of a particular shift (the number of hours on a particular day). Filter by: • Any Length • Equal To • No More Than • No Less Than • Between
Shift Start Time	Shift start time. Filter by: • Any Time • At • Not After • Not Before • Between
Shift End Time	Shift finish time. Filter by: • Any Time • At • Not After • Not Before • Between

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Activity Name	Name of shift events within the schedules. You can select up to two events, and filter according to the events in the shift. For example: • Break • CKA • Late • Learning Break
Length	Length (in hours) of a particular activity. Filter by: • Any Length • Equal To • No More Than • No Less Than • Between
Starting	Activity start time. Filter by: • Any Time • At • Not After • Not Before • Between
Skills	

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Skills Associated with Shift	Allows you to filter the skills required for the shifts in the shift bid options that you want to view in the list. To select required skills for the filter, move the relevant skills from **Available Skills** to **Selected Skills**. Then, select one of the following options: • **At Least These Skills**: The skills required for the shifts in the Bid Options list *must include* the skills displayed in **Selected Skills**. There can also be *more* required skills for the shifts. • **At Most These Skills**: The skills required for the shifts in the Bid Options list *can include* the skills displayed in **Selected Skills**. There can also be *less* required skills for the shifts. • **Exactly These Skills**: The skills required for the shifts in the Bid Options list *must only be* the skills displayed in **Selected Skills**. There *cannot* be any additional required skills for the shifts.

Display template description column for organizations

The text boxes in the Description column provide a place to enter a description for a shift or schedule. If the **Description** column is displayed and some text boxes are unavailable, it can mean that there are organizations that need to have this option selected.

Procedure

First, if needed, identify the organizations in your auction.

1. Go to **Forecasting and Scheduling**. Under **Campaign**, select **Settings**.
2. In the left pane, click the campaign and scheduling period.
3. In the **Organization** list, scroll until you can view all organizations.

   Next, turn on the **Display template description column** for each organization in the auction.
4. Go to **Organization Management**. Under **Request Management**, select **Settings**.
5. In the left pane, click an organization that is in your auction.
6. In the right pane, scroll down to the **Shift Bidding** section.
7. In **Bid Options**, select **Display template description column** if needed.
8. Click **Save**.

   On the **Schedules** page, the **Description** column text box is available for the templates associated with this organization.
9. Repeat Step 5 through Step 8 until all organizations have been checked and updated if needed.

Confidential and Proprietary Information of Verint Systems Inc.

Close a shift bidding auction

After bids have been approved and no additional bidding is needed, the auction can be closed. Closing the auction removes shifts that have been rewarded from the phantoms in the scheduling calendar.

When you close an auction, you can assign bonus point to employees who submitted bid requests but none were approved. In a future auction, employees with bonus points have an advantage to get their preference.

Procedure

1. Go to **Request Management**. Under **Schedule Auctions**, select **Settings**.
2. From the left pane, click an auction.
3. Click **Close Auction**.
4. Click one of the following buttons:
   - **Close and Assign None Approved Bonus**
   - **Close and without Assigning Approved Bonus**

   When you close the auction, the system automatically deletes phantom schedules that were assigned to employees during the auction. If you locked phantom schedules on the Calendar associated with this auction by selecting the **Update Schedule** auction setting, the system unlocks the remaining phantom schedules *not* assigned to employees.

Chapter 10

Running a time-off bid

Time-off bidding automates the vacation bidding process. Employees can bid on their time off for a bid period such as annual, semi-annual vacations bids.

Topics

Recommended workflow: Run a time-off bid 229

Create a time-off bid 230

Manage which employees are in a time-off bid 233

Import maximum period to approve for employees 235

Close a time-off bid 237

Reopen a time-off bid 238

Delete a time-off bid 239

Recommended workflow: Run a time-off bid

You can set up and manage a vacation bid and the bidding by employees.

This workflow describes the procedures for setting up and managing a time-off bid.

Workflow

1. Create a time-off bid (page 230)

   You can set up and manage a vacation bid and the bidding by employees.
2. Manage which employees are in a time-off bid (page 233)

   Employees must be added to a bid for their time-off request to be processed as a bid request instead of a regular time-off request.
3. Approve all time-off choices without violations (page 266)

   You can process all time-off choices in a filter instead of processing them one page at a time. With this method, multiple choices in a request can be approved, and choices in a request can be approved when other choices have violations.
4. Close a time-off bid (page 237)

   When you are finished processing the requests for a time-off bid, close the bid to release the employees in it. Employees can be in multiple open bids as long as the bid periods do not overlap.
5. Delete a time-off bid (page 239)

   To manage the number of bids listed on the Time Off Bid Summary page, delete bids with a status of Closed. When a bid is deleted, all data associated with the bid is deleted.

Confidential and Proprietary Information of Verint Systems Inc.

Create a time-off bid

In an open time-off bid, employees in an organization and its suborganizations can bid for their vacation preferences.

Consider using a specific time off type (activity) without auto processing for Time Off Bidding. This approach allows you to use auto processing for existing time off types.

Before you begin

Set up time-off requests

Recommended workflow: Set up time-off requests (page 29)

Procedure

1. Go to **Request Management**. Under **Time Off Bidding**, select **Settings**.
2. Complete the fields in the **General Settings** section.
3. Optional: Complete the fields in the **Validation Setting** section.
4. Click **Save**.

What to do next

Manage which employees are in a time-off bid (page 233)

Related topics

Settings page (page 230)
Recommended workflow: Run a time-off bid (page 229)

Settings page

By default, the Settings page has two panes. The left pane lists the name of existing bids. The right pane is the workspace for creating a bid.

To expand the workspace and hide the other pane, click the handle on the inside of each pane. To return to the default view with two panes, click the handle again.

Example:

When viewing the default Settings page with two panes (left selection pane, right workspace pane), click the handle on the side of the left pane to show the Time Off Bid Summary information and hide the Settings workspace. In the Time Off Bid Summary view, you can see the Name column and six other columns.

To return to the default view with two panes, on the right side, click this handle again.

Settings workspace

Field	Description
General Settings	
Name	Name of the bid.

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Status	Status of the bid. When a new bid is created, the status is preset to Open. New requests cannot be submitted to a bid with a closed status.
Organization	Organization and its sub-organizations that can participate in the bid.
Bid Period	Start and end dates that employees can submit requests. After the end date, the system changes the status to Closed. The Bid Period cannot overlap the Request Period.
Request Period	Start and end date of the period in the bid. The Request Period cannot overlap the Bid Period.
Activities Allowed	List of activities that employees can submit requests for in this bid. More than one activity can be in the bid. For an activity to be in this list, it must be set up to be used in requests. Setup is done on the Activity Details page, under Request Management Usage. The Used in Requests check box must be selected.
Validation Settings	
Minimum of <numeric value> <days or weeks> per Choice	Defines the minimum period of a valid time-off request choice.
Maximum of <numeric value> <days or weeks> per Choice	Defines the minimum period of a valid time-off request choice.
Maximum of <numeric value> <days or weeks> to be approved	Maximum period that can be approved for employees in this organization and its suborganizations.
Varies by Employee	When selected, the maximum period that can be approved for each employee in a bid can vary and be imported using a .txt file.

Import maximum period to approve for employees

When you do not want all employees to have the same *maximum period to approve* value, import a text file with the specific value you want for each employee (maximum weeks or days). This process can be used to import initial values or update existing values.

This feature is available if the **Varies by Employee** check box is selected on the Settings page (under Validation Settings).

Before you begin

Manage which employees are in a time-off bid (page 233)

Create the import file

1. Open a text editor such as Notepad.
2. Enter the following column headers: Last Name, First Name, Maximum Period to Approve
3. Enter the import data using one of the three following delimiters: tab, comma, semicolon.
4. Save the .txt file.

Import the import file

1. Go to **Request Management**. Under **Time Off Bidding**, select **Employees**.
2. In the left pane, select a bid.
3. In the workspace, click **Import Maximum Period Per Employee**.
4. Complete the import parameters:
   a. Change the **Import Units to Days** if needed.
   b. Browse to select the import file.
   c. If needed, change the delimiter to match the delimiter used in the import file.
   d. Type the number of lines to ignore at the beginning of the import file.
   e. For each column in the import file, enter a number to identify its position.
5. Click **Save**.

Chapter 11

Managing employee requests

Request Management allows you to manage all types of requests for employees. Requests include time-off, flex time, shift swaps, shift bidding, and shift requests and change. In addition, you can view time-off activity for specific time-off pools or organizations in different calendar formats.

Topics

Manage employee requests 241

Request expiration rules 242

View all or specific employee requests 243

Create a custom view of employee requests 245

Create a filter for viewing requests 246

View details of a request 258

Process individual requests 262

Process a group of requests 264

Approve all time-off choices without violations 266

Process all VTO options requests 267

Approve all shift bid requests without violations 270

Withdraw an approved shift bid 271

View the Time Off Calendar 272

View the My Time Off Calendar (WCAG) 275

View time-off summary information 278

Purge requests 282

Manage employee requests

After employees submit requests, you can view and manage the requests. In addition, you can view time-off activity for a specific time-off pool or for a specific organization.

View employee requests

After employees submit requests, you can view them.

To customize the list of requests displayed on the page, you can create one or more filters, and customize the columns on the page. You can drill down into a specific request to view more details.

Manage requests

You can approve, tentatively approve, deny, or withdraw requests.

You can manage requests for specific, individual requests submitted by employees. Alternatively, you can manage requests for a *group* of requests submitted by employees. Instead of managing each request individually, you can work in batch mode for requests.

For example, you can *approve* all requests that do *not* have any violations, or *deny* all requests that *do have* violations.

View time-off activity for time-off pools or organizations

You can view allocated, pending, and scheduled time-off activity on a daily level in a calendar format.

For time-off pools, you can view the number of *hours allocated* to the time-off pool, number of *pending* time-off hours, and number of *scheduled* time-off hours.

For organizations, you can only view the number of pending and scheduled time-off hours. Because multiple time-off pools can belong to the same organization, the values for an organization show the *total* number of pending and scheduled time-off hours for *all time-off pools* in that organization.

You can also view time-off activity within each day in an hourly journal format, in multiples of 15-minute time intervals. For each time interval for a specific time-off pool, you can view the allocated hours, pending, and scheduled time-off hours.

Confidential and Proprietary Information of Verint Systems Inc.

Request expiration rules

Request Management system rules set the expiration date based on the start date, end date, and submission date.

When a request has an expiration date in the past, the status changes to *Expired*. Requests with an Expired status are not displayed on the Employee Requests page when the All Active filter is used.

Time off requests (including advanced VTO and time off bidding)

- When the start date and the end date for all choices occur in the past, then the expiration date is set to three months from the submission date.
- When the start date for some choices is in the past and the end date for some choices is in the future, then the expiration date is set to three months from the end date of the last occurring choice.
- When one of the choices starts in the next 48 hours, then the expiration date is set to three months from the last occurring end date of all choices.
- When the start date and end date of all choices occur in the future, then the expiration date is set to the start date of the first occurring choice.

Shift Request & Change

- When both the request start date and end date occur in the past, then the expiration date is set to three months from the submission date.
- When the request start date is in the past and the end date is in the future, then the expiration date is set to three months from the end date.
- When the shift or extension starts in the next 48 hours, then the expiration date is set to three months from the end of the request.
- When both the request start date and end date occur in the future, then the expiration date is set to the start date.

Flex time requests

- When all segments in the request occur in the past, then the expiration date is set to three months from the submission date.
- When some segments in the request start in the past and some start in the future, then the expiration date is set to three months from the segment that ends on the last occurring date.
- When one of the segments starts in the next 48 hours, then the expiration date is set to three months from the end date of the last occurring segment.
- When all segments in the request occur in the future, then the expiration date is set to the start date of the first occurring segment.

Related topics

Employee Requests page: All Active view and No Filter view (page 244)

Confidential and Proprietary Information of Verint Systems Inc.

View all or specific employee requests

You can view employee requests using various options. Depending on your goal when viewing requests, some options are better than others.

For example, both the All Active view and the No Filter view show only the columns that are common to all request types. If you want to view more information, you can create and use a filter for a single request type. Then columns specific to that request type are displayed in addition to the columns that are common to all request types.

Procedure

1. Go to **Request Management**. Under **Employee Requests**, select **Employee Requests**.

   Until you create your own filters, the default filter, **All Active**, is selected. This filter excludes expired, withdrawn, and invalid requests.
2. To display the employee requests in the best way for your purposes, use one or more of the following viewing options:
   - To view all requests (including expired, withdrawn, and invalid requests), from the View list, click **No Filter**.
   - To view one type of requests, create a filter that only includes that request type and any other criteria as needed.
   - To view only requests submitted by an employee, in the **Find** box, type the last name of the employee, and click **Go**.

     The employee name criteria is applied *on top of* the selected filter.
   - To view requests in a different sort order, click the relevant column to switch between ascending and descending order of that column.

     For example, to view the oldest requests at the top of the list, click the **Submitted** column. The system displays the requests submitted in descending order. To switch back to viewing the newest requests first, click the column again.
   - To view requests with a request start date in a specific date range, from the **Date Range** field, select new dates.

Employee Requests page: All Active view and No Filter view

Use the Employee Requests page to view requests, process requests, and create a request for an employee.

Both the All Active view and the No Filter views show only the columns common to multiple requests type. The All Active view excludes expired, withdrawn, and invalid requests. The All Active view is the default view until you create your own filters.

Column	Description
Name	Name of the employee
Status	Icon showing the status of the request. The name of the status is displayed when you point to the icon. Statuses include: approved, pending approval, tentatively approved, withdrawn, waitlisted, denied, escalated, expired, in negotiation, and invalid.
Type	Column is available to display the type of request when the View is **No Filter** or a filter is used to view either Time Off requests or Shift requests.
Submitted	Date the request was submitted.
Last Modified	Date the request was last changed.
Seniority	Start date of the employee at the organization.
Rank	Rank of the employee in the company.
Expired	Indicates whether the request is expired (**Yes**) or not (**No**).
Comments	Text of any comments added by the manager or employee.
Alerts	Icons showing which request validation rules are violated, as a result of this request. The rule name is displayed when you point to the icon.
Actions	Clickable icons allowing you to change, deny, withdraw, view further details about the request, tentatively approve, or approve the request.

Create a custom view of employee requests

You can create a custom view of the Employee Requests page by adding, removing, and rearranging the columns.

After you are satisfied with your custom setting, you can save and name it for selection later. When needed, you can edit the setting or create another custom setting.

Procedure

1. Go to **Request Management**. Under **Employee Requests**, select **Employee Requests**.
2. On the upper-right area of the page, from the **Customize:** list, click **Edit**.
3. From **Select Configuration to Edit:**
   - To select an existing custom column display setting, click the name of that setting.
   - To create a new custom setting, select **All**.
4. To *remove* specific columns from your display:
   a. From **Selected Properties**, click a column name.
   b. To move the column to **Available Properties**, click the **Assign left** arrows (**<<**).
5. To *add* specific columns back to your display:
   a. From **Available Properties**, click a column name.
   b. To move the column to **Selected Properties**, use the **Assign right** arrows (**>>**).
6. To *rearrange* the column order:
   a. From **Selected Properties**, select a column name.
   b. Click the **Assign up** or **Assign down** arrows until you move the column to the location that you want.
7. Save your column setting:
   - If you are creating a column setting, click **Save As...** and type the name.
   - If you are editing a previously created column setting:
     - To save the edited column setting with its *current* name, click **Save**.
     - To save the edited column setting with a *different* name, click **Save As...** and type the new name.

From the **Employee Requests** page, the **Customize:** list, you can view all saved column settings.

Create a filter for viewing requests

You can create one or more filters to limit the requests listed on the Employee Requests page. For most request types, all filter criteria is optional. Use as few or as many criteria in your filter to meet your needs.

Use a filter when you want to view a specific type of requests or process a group of requests.

Procedure

1. Go to **Request Management**. Under **Employee Requests**, select **Employee Requests**.
2. From the **View** list, click **Create Filter**.

   The Create Filter window is displayed. By default, the Request Type is **All**.
3. Optional: Under **Organization Name**, select one or more organizations.

   When an organization is selected, its suborganizations are automatically selected.
4. Optional: Select a specific request type.

   On the right, some of the criteria varies based on the selected request type.
5. Optional: For each item you want to filter by, type a value or make a selection from the drop-down menus.
6. Click **Save As**.
7. Type a unique, descriptive name.
8. Click **Save**.

   This filter is available in the View list on the Employee Requests page.

Related topics

Create Filter window (page 246)

Create Filter window

Use the Create Filter window to create a filter for employee requests listed on the Employee Requests page.

By default, the Request Type is set to *All*. The filter criteria varies based on the selected request type.

"All" request type filter criteria

The following criteria are available for the *All* request type. In addition, these criteria are part of the criteria available for the other request types.

Criterion	Description
Supervisor	List of available supervisors.

Confidential and Proprietary Information of Verint Systems Inc.

Criterion	Description
Status	List of available statuses for the selected request type. The list is a subset of the following statuses: **Approved**, **Denied**, **Escalated**, **Expired**, **Invalid**, **Pending**, **Tentative**, **Waitlist**, **Withdrawn**, **Withdrawal Requested**, and **Withdrawal Rejected**. **Example**: When the Request Type is Time-Off, the list includes Waitlist but does not include Expired.
Submitted	Date the request was submitted.
Seniority	Start date for employees associated with the request.

Time-off request filter criteria

In addition to the criteria common to all request types, the following criteria is available for time-off requests.

Criterion	Description
Start-End Dates	Time-off period.
Time-Off Bid	When used, requests in other open time-off bids are excluded by the filter.
Number of Choices	Values are either **All** or **First Only**. These values are used to specify whether the selected **Start-End Dates** apply to all or just the first time-off choice.
Time-Off Pool	A drop-down list allowing you to select a time-off pool to filter by.
Time-Off Type	Excludes requests with other time-off types.

Flex Time request filter criteria

In addition to the criteria common to all request types, the following criteria is available for Flex Time requests.

Criterion	Description
Time Off Start-End Dates	Time-off period.
Makeup Start-End Date	Makeup work period.
Makeup Activity	Activity for makeup work period.

Shift swap request filter criteria

In addition to the criteria common to all request types, the following criteria is available for shift swap requests.

Criterion	Description
Start-End Dates	Shift dates.

Confidential and Proprietary Information of Verint Systems Inc.

Criterion	Description
Type	Shift swap type: One-way or two-way swap.
Skills	Employee skills. (Allows multiple skills to be selected from a list. Use the **Ctrl** key to select more skills, and click the list arrow when your selection is complete.

Shift bidding request filter criteria

In addition to the criteria common to all request types, the following criteria is available for shift bidding requests.

Criterion	Description
Auction Name	Limits the requests in the list to ones in a specific auction. Use this criterion if you have concurrent auctions in the same schedule period and want to view only the shift bid requests in a specific auction.
Start-End Dates	Shift dates.
Preference	Shift preference level.
Day	Day of the week that the shift falls on.
Deadline	Bid deadline (personal or auction deadline).
Rank	Rank of the employee submitting the request.
Points	Points accumulated by the employee.
Bonus	Bonus (if any) assigned to the employee for a particular auction.
Score	Total score of the employee.

Shift Request and Change requests filter criteria

In addition to the criteria common to all request types, the following criteria is available for shift request and change requests.

Criterion	Description
Type	Type of custom shift request to display, for example, New Shift or Shift Change.
Campaign	Name of the campaigns to include in the list.
Shift	Name of the shifts to include in the list. You cannot filter by both Shift and Extension.
Activity	Name of the activities to include in the list.
Extension	Names of the extensions to include in the list. You cannot filter by both Shift and Extension.
Overtime	Include or exclude overtime requests from the list.

Confidential and Proprietary Information of Verint Systems Inc.

Employee Requests page: Time-off request filter view

The Employee Request page has the following columns when a time-off request filter is used.

Column	Description
Name	Name of the employee.
Status	Icon showing the status of the request. The name of the status is displayed when you point to the icon. Statuses include: approved, pending approval, tentatively approved, withdrawn, waitlisted, denied, escalated, expired, in negotiation, and invalid.
Type	Column is available to display the type of request when the View is **No Filter** or a filter is used to view either Time Off requests or Shift requests.
Submitted	Date the request was submitted.
Last Modified	Date the request was last changed.
Start Date	Time stamp of the beginning of the requested time-off.
End Date	Time stamp of the end of the requested time-off.
Length	Duration of the requested time-off.
Hours Accounted	Number of the employee time-off hours involved in the request.
Choice Alerts	Each possible choice for a time-off request is validated independently. For each failed validation, this area shows the icon and description of the validation, similar to that described in the previous section on the alerts information.
Seniority	Start date of the employee.
Rank	Rank of the employee.
Time Off Pool	Time-off pool that employee belongs to.
Expired	Indicates whether the request is expired.
Comments	Text of any comments added by the manager or employee.
Alerts	Icons showing which request validation rules are violated as a result of this request. When you point to the icon, the rule name is displayed.

Confidential and Proprietary Information of Verint Systems Inc.

Column	Description

Actions	Icons that you can click to apply an action to the request. To display the icon name, point to it.
	Actions can include the following:
	• **Edit**: Allows the user to edit the request for **Pending** or **Tentatively Approved** requests only.
	• **Approve**: Allows the manager to approve the request, which is then reflected on the Published schedule.
	• **Tentatively Approve**: Allows the manager to approve the request for the *Draft* schedule *only*. It does *not* appear on the *Published* schedule. Only Approved requests are reflected on the Published schedule. A Tentatively Approved request appears to the employee as Pending.
	• **Deny**: Allows the manager to deny the request. If the employee has a notification rule configured, they receive a notification about the denied request. If the Request Management setting, **Allow escalation of denied requests**, is enabled, the employee can escalate a denied request.
	• **View detail**: Allows the manager to view a summary of the request, any alerts associated with the request, and a history of changes related to the request.
	• **Add to Waitlist**: Adds the request to the waitlist for any Pending and Denied non-expired requests. This action is available if the activity has a time-off pool with a waitlist, the logged-in user has the relevant privileges, and when creating a new time off request, the **Add to Waitlist if not Approvable** setting was *not* selected. When you select **Add to Waitlist**, the status of the request is Waitlist. A request remains on the waitlist until it is approved or denied.
	• **Withdraw actions**: If an employee selects to withdraw a Pending request, the system withdraws it. If an employee selects to withdraw an Approved request, the status of the request is **Withdrawal Requested**, and the following manager actions are available:
	  ▪ **Accept Withdraw**: Approves the withdrawal of the request. The status of the request changes to Withdrawn. Withdrawn requests are *not* included in the **All Active** filter.
	  ▪ **Reject Withdraw**: Rejects the withdrawal of the request. The status of the request does *not* change.
	  ▪ **Cancel Withdraw**: Cancels the withdrawal request.

Time-off request filter with a status of Waitlist

When time-off requests are filtered with a status of Waitlist, specific columns display on the **Employee Request** page.

Column	Description
Expiry Date	Waitlist expiration date.

Confidential and Proprietary Information of Verint Systems Inc.

Column	Description
Priority	Priority of waitlist request.
Organization Name	Employee's organization.
Added to Waitlist	Date the request was added to Waitlist.
Days on Waitlist	Number of days the request has been on the Waitlist.
Time on Waitlist	Exact time the request has been on the Waitlist.

Employee Requests page: Flex time request filter view

The Employee Request page has the following columns when a flex time request filter is used.

Column	Description
Name	Name of the employee.
Status	Icon showing the status of the request. The name of the status is displayed when you point to the icon. Statuses include: approved, pending approval, tentatively approved, withdrawn, waitlisted, denied, escalated, expired, in negotiation, and invalid.
Submitted	Date the request was submitted.
Last Modified	Date the request was last changed.
Seniority	Start date of the employee.
Rank	Rank of the employee
Type	Column is available to display the type of request when the View is **No Filter** or a filter is used to view either Time Off requests or Shift requests.
Last Modified	Date the request was last changed.
Time Off Start Date	Time stamp of the beginning of the requested time-off.
Time Off End Date	Time stamp of the end of the requested time-off.
Time Off Length	Duration of the requested time-off.

Confidential and Proprietary Information of Verint Systems Inc.

Column	Description
Hours Accounted	Number of the employee time-off hours in the request. For example: • A flex time request is for three hours • One of the three hours is over lunch Therefore, the time listed in this column is 2.
Time Off Pool	Time-Off Pool to which the employees belong.
Makeup Start Date	Time stamp of the beginning of the makeup time.
Makeup End Date	Time stamp of the end of the makeup time.
Makeup Activity	Activity to be completed during the makeup time.
Expired	Indicates whether the request is expired (**Yes**) or not (**No**).
Comments	Text of any comments added by the manager or employee.
Alerts	Icons showing which request validation rules are violated, as a result of this request. The rule name is displayed when you point to the icon.
Actions	Icons allowing you to change, deny, withdraw, view further details about the request, or approve the request.

Related topics

Employee Requests page: Shift swap request filter view

The Employee Request page has the following columns when a shift swap request filter is used.

Column	Description
Name	Name of the employee who submitted the request.
Status	Icon that indicates the status of the request. When you point to the icon, the name of the icon is displayed.
Submitted	Date the request was submitted.
Last Modified	Date the request was last changed.
Seniority	Start date of the employee.
Rank	Rank of the employee.
Shift Date	Date on which the shift offered for swap takes place.

Confidential and Proprietary Information of Verint Systems Inc.

Column	Description
Start	Time (in the viewing time zone) when the shift starts.
End	Time (in the viewing time zone) when the shift ends.
Post Expires	Time by which employees expect the swap to be finalized.
Swap Type	Indicates whether the swap is one-way or two-way. In a one-way swap, one employee takes over the shift of another employee without giving one in return.
Partial Shift	Indicates whether the shift swap being proposed is partial. Shifts can be swapped either entirely or partially. In a *partial* shift swap, the employee: • Can propose swapping only a portion of the shift or • Can propose dividing the shift into multiple portions, each of which can be swapped.
Expired	Indicates whether the request is expired.
Comments	Text of any comments added by the manager or employee.
Alerts	Icons showing which request validation rules are violated as a result of this request. When you point to the icon, the rule name is displayed.
Actions	Icons that you can click to apply an action to the request. To display the icon name, point to it.

Employee Requests page: Shift bid request filter view

The Employee Request page has the following columns when a shift bid request filter is used.

Column	Description
Name	Name of the employee who submitted the request.
Bid Name	Name given by the employee to the request.
Status	Icon that indicates the status of the request. When you point to the icon, the name of the icon is displayed.
Submitted	Date the request was submitted.

Confidential and Proprietary Information of Verint Systems Inc.

Column	Description
Last Modified	Date the request was last changed.
Use Points	Indicates whether the employee has chosen to use accumulated bonus points in this bid.
Seniority	Start date of the employee.
Rank	Rank of the employee.
Points	Number of bonus points available to the employee. Bonus points are provided to encourage employees to bid on unpopular schedules
Bonus	Number of bonus points awarded for this shift.
Score	Calculated score of the shift bidding request. The score weights the request against other requests for the same shift.
Preference	Preference level selected by the employee for the specific schedule that is being requested.
Expired	Indicates whether the request is expired.
Comments	Text of any comments added by the manager or employee.
Alerts	Icons showing which request validation rules are violated as a result of this request. When you point to the icon, the rule name is displayed.
Actions	Icons that you can click to apply an action to the request. To display the icon name, point to it.

Employees Requests page: Shift request and change filter view

The Employee Request page has the following columns when a shift request & change filter is used.

The values displayed for shift requests and changes only reflect the *difference* from what was originally scheduled.

For example, if only the shift start time changes, *none* of the other columns display a value. You see the change request only, and *not* the original shift settings.

Column	Description
Name	Name of the employee who submitted the request.
Status	Icon that indicates the status of the request. When you point to the icon, the name of the icon is displayed.
Type	Time-off type (activity).
Campaign	Name of the campaign to which the user is assigned during the start of the request.
Submitted	Date the request was submitted.
Last Modified	Date the request was last changed.
Seniority	Start date of the employee.
Rank	Rank of the employee.
Start Date	Start date and time of the request. The date and time includes any overtime before or after the shift. For requests to change an existing shift, only the changes are reflected. For example, a request to extend a shift would only include the extension date and time, not the already scheduled shift.
End Date	End date and time of the request.
Shift	Name of the main shift, if any, being requested.
Activity	Name of the activity of the main shift, if any, being requested.
Overtime	Indicates whether the main shift being requested is overtime (**Yes** or **No**).
Ext Before	Name of the extension before shift, if any, being requested.
Ext Before Activity	Name of the activity for the extension before the shift, if any, being requested.
Ext Before OT	Indicates whether the extension before the shift being requested is overtime.
Ext in Gaps	Indicates whether the extension occurs during a shift gap.

Confidential and Proprietary Information of Verint Systems Inc.

Column	Description
Ext in Gap Activity	Name of the activity for the extension during the shift gap.
Ext After	Name of the extension after shift, if any, being requested.
Ext After Activity	Name of the activity for the extension after the shift, if any, being requested.
Ext After OT	Indicates whether the extension after the shift being requested is overtime (**Yes** or **No**).
Expired	Indicates whether the request is expired.
Comments	Text of any comments added by the manager or employee.
Alerts	Icons showing which request validation rules are violated as a result of this request. When you point to the icon, the rule name is displayed.
Actions	Icons that you can click to apply an action to the request. To display the icon name, point to it.

Shift bid request form description

Complete the fields on this form when submitting a new single shift bid request. After submitting a request, you can use this form to view or edit the details of an existing shift bid request.

Field	Description
Shift Bid Request	
Bid Name	Name that describes the shift bid request.

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Preference	Preference or priority of the shift bid request (1 is the highest preference.)
Comments	Optional field to include comments about the shift bid request.
Auction	Read-only shift bid auction information, including the following: • **Schedule Period**: Date range of the scheduling period associated with the auction. • **Total Schedule Hours**: Total number of scheduled hours in the shift bid request. For example, if you selected 3 8-hour shifts on Monday, Wednesday, and Friday, the Total Schedule Hours is 24. • **Auction Deadline**: Date and time by which the auction ends. • **Personal Deadline**: Date and time by which you need to submit all shift bid requests.

After creating or editing a shift bid request and selecting **Save**, the updated and new fields appear on the form:

- **Shift Details**: Now displays detailed information about the shift events and calendar events of your selected shifts.
- **Alerts**: Displays the icons and descriptions for any failed validations related to the submitted shift bid request.
- **Date** / **Status** / **Modified By** / **Comments**: Displays a list of changes (or history) related to the shift bid request.

Shift requests & changes details

Use this window to view details about a selected shift request & change.

Only the parts of the request that are different than the employee's scheduled shift (if any) are displayed.

Description

- **Request Summary** section: Displays the employee's name, type of request, and the request's start and end dates.
- **Shift Information** section: Displays shift's start and end dates, duration, name of the shift, activity, and whether the shift is overtime.

Confidential and Proprietary Information of Verint Systems Inc.

- **Extension Before Shift**: For requests for extension before a shift, shows the type, activity, duration, gap, and whether the extension is overtime.
- **Extension During Gap**: For requests for extension in to a gap, shows the type, activity, duration, and gap.
- **Extension After Shift**: For requests for extension after a shift, shows the type, activity, duration, gap, and whether the extension is overtime.
- **Alerts** section: Displays the icons and a description for any failed validations.
- **History and status information**: Contains the modification history (audit trail) and status of the request.

Confidential and Proprietary Information of Verint Systems Inc.

Process individual requests

When you just need to process a few requests, you can process them individually.

> When you deny a request or reject a withdrawal, you can still view the request on the Employee Request page. You can no longer edit the request or change the status.

Other processing options

- If you want to process a group of requests displayed on the Employee Requests page, you can.
- If you want to process or approve all requests in a filter, the following options are available:
  - Process all VTO options requests
  - Approve all shift bid requests without violations
  - Process all time-off choices without violations

Procedure

1. Go to **Request Management**. Under **Employee Requests**, select **Employee Requests**.
2. For a specific request, click the relevant icon from the **Actions** column:
   - **Approve**: Approves the specific request. The schedule information is updated for forecasting and scheduling purposes. If alerts are configured, they are sent accordingly.

     > Before approving overlapping time off requests, make sure that the employee understands that once the overlapping time off requests are approved, they *cannot* withdraw them.
     >
     > You can approve overlapping time off requests to maximize the duration of time off for all employees. However, overlapping time off requests *cannot* be withdrawn once approved.
     >
     > This behavior is the same for group and auto-processing as well.

   - **Tentatively Approve**: Displays the status **Pending** to the employees who submitted them. The status is **Tentative** to you until you either confirm the request or publish the schedule.

     > Time-off requests that are tentatively approved *do change* the schedule.
     >
     > If a schedule is published with tentative approvals, the approvals change from *tentative* to *approved*. Shift swap requests stay marked invalid.

   - **Withdraw**: Removes the request from consideration.
   - **Deny**: Removes the request from consideration.

     When you select **Withdraw** or **Deny** for a request, you can add a comment, click **Continue**, and the request status changes accordingly. You can still view the request on the **Employee Requests** page (and view request details). However, you can no longer change the status or details of the request (including selecting **Approve**, **Tentatively Approve**, or **Edit**).

Confidential and Proprietary Information of Verint Systems Inc.

> The denied request is put on a waitlist under the following circumstances:
>
> - **Enable waitlists** is selected
> - You deny a time-off request and another employee withdraws an approved time-off request

- **Edit**: Allows you to change the details of the request. Once edited, you can add comments about your updates in the **Add Comment** box and click **Save**.

  The schedule information is updated:

  - In the **Employee Roster** (for a manager)
  - On the **Calendar** page
  - On the **My Schedule** page (for employees)

3. To view details about a specific request, click the **View Detail** icon.

Related topics

Confidential and Proprietary Information of Verint Systems Inc.

Process a group of requests

Instead of processing requests individually, you can save time by processing them as a group (up to 30 requests). Multiple processing options are available.

Only requests displayed on the current Employee Request page are processed. These requests are processed in the order that they are displayed on the page. Processing starts with the request at the top of the page and continues to the next request until all requests on that page are processed.

Other group options

If you want to process or approve *all* requests in a filter, the following options are available:

- Process all VTO options requests
- Approve all shift bid requests without violations
- Process all time-off choices without violations

Procedure

1. Go to **Request Management**. Under **Employee Requests**, select **Employee Requests**.
2. To view only the request type that you want to process, use a filter created for that request type.
3. To increase the number of requests displayed, in the lower-left area of the page, increase the number. (The default is 10 requests per page, and the maximum is 30 requests per page.)
4. To set the processing order, sort by the **Seniority** or **Rank** column.
5. Click **Group Actions**.
6. From **Group Actions**, click one of the following options:
   - **Approve all without Violations**: If there are multiple choices in a request, only one choice per request is approved. If any of the choices has a violation, no choices are approved.
   - **Tentatively Approve all without Violations**
   - **Approve Time Off Choices without Violations**: This choice is available when a time-off filter is used with a time-off bid selected. Multiple choices can be approved in a request (for example, Thanksgiving and Christmas). Choices in a request can be approved when other choices in the request have violations.
   - **Process VTO Options Requests**: This choice is available when using a time-off filter with time-off types (activities) that are set to Display Multiple VTO options are selected. Requests are either approved or denied.
   - **Deny any with Violations**
   - **Confirm all Tentative Approvals**
   - **Remove all Tentative Approvals**
7. To confirm that you want to proceed with processing, click **OK**.

   Requests on the current page start processing. The page is locked until processing completes.
8. If you want to process another page of requests, do the following:
   a. To display the next group of requests, use the controls in the lower, left section of the page.
   b. Repeat Step 5 through Step 7.

Confidential and Proprietary Information of Verint Systems Inc.

Related topics

Process all VTO options requests (page 267)

Approve all time-off choices without violations

You can process *all* time-off choices in a filter instead of processing them one page at a time. With this method, multiple choices in a request can be approved, and choices in a request can be approved when other choices have violations.

Requests on all the Employee Request pages are processed based on the sort order. Processing starts with the request at the top of the first page and continues to the next request until all requests on all pages are processed. The requests are approved or denied based on whether the time-off pool has available hours and the request does not violate the validation rules for this request type.

Procedure

1. Go to **Request Management**. Under **Employee Requests**, select **Employee Requests**.
2. Create a time-off filter with a status of Pending.
3. From the **View** list, select your filter.
4. Sort requests in your preferred order (for example, Seniority or Rank).
5. Click **Approve All Time Off Choices without Violations**.
6. To confirm that you want to process all requests in the filter, click **OK**.

   During processing, the status is displayed above the Employee Request list and on the **Approve All Time Off Choices without Violations** button.

Process all VTO options requests

You can process *all* VTO options in a filter instead of processing one page at a time. When VTO options requests are processed, they are approved or denied based on whether the time-off pool has available hours and the request does not violate the validation rules for this request type.

With this method, requests on all the Employee Request pages are processed. Requests are processed based on the sort order. Processing starts with the request at the top of the first page and continues to the next request until all requests on all pages are processed.

VTO requests cannot be manually approved or denied.

Procedure

1. Go to **Request Management**. Under **Employee Requests**, select **Employee Requests**.
2. Create a time-off filter that includes time-off types (activities) that have the Display Multiple VTO Options set.

   > If you select any time-off types that do not have the Display Multiple VTO Options setting turned on, the Group Action button, Process VTO Options Requests, will not be available later in this procedure.

3. From the **View** list, select your filter.
4. Sort requests in your preferred order.
5. Click **Process All VTO Options Requests**.
6. To confirm that you want to process all requests in the filter, click **OK**.

   During processing, the status is displayed above the Employee Request list and on the Process All VTO Options Request button.

   When processing is complete, you either receive a message stating how many requests were approved or a message stating there are no requests available to approve.

Related topics

Create a filter for viewing requests (page 246)

VTO multi-option requests processing overview

When processing a request with multiple options selected, the options are processed in the same order as they are listed on the Create New Request form. If the first selection fails validation, then the next selection is validated. This process continues until either one selection is approved or all selections are denied.

Any request that fails validation on submission will not be processed.

Full Day option

The entire shift must pass validation rules to be approved.

Confidential and Proprietary Information of Verint Systems Inc.

Partial Day option

From the request start time and for the entire duration, this request must pass the validation rules to be approved.

Late Start option

Validation starts with the beginning of the shift and continues forward to the end of the shift. Time-off will be approved for a duration until the validation fails for the entire shift.

For all the following examples, the shift is from 8 A.M. to 5 P.M.

- Example 1: The time-off pool does not have hours available at 10 A.M. The request is approved for 8 A.M. to 10 A.M.
- Example 2: There are no validation failures for the entire shift. The request is approved for 8 A.M. to 5 P.M.
- Example 3: There are no calendar events to avoid in the shift, and there are hours in the time-off pool. However, the employee has a balance of only two hours above the required minimum hours in a pay period. The request is approved for 8 A.M. to 10 A.M., the first two hours of the shift.

Early Leave option

Validation starts with the end of the shift and continues backward to the beginning of the shift. Time-off will be approved for a duration until the validation fails for the entire shift.

For all the following examples, the shift is from 8 A.M. to 5 P.M.

- Example 1: A calendar event, such as a meeting, occurs from 2 P.M. to 3 P.M. Meeting is selected in the validation rule Schedule calendar events activities to avoid. The request is approved for 3 P.M. to 5 P.M.
- Example 2: There are no validation failures for the entire shift. The request is approved for the full shift, 8 A.M. to 5 P.M.
- Example 3: There are no calendar events to avoid in the shift, and there are hours in the time-off pool. However, the employee has a balance of only two hours above the required minimum hours in a pay period. The request is approved for 3 P.M. to 5 P.M., the last two hours of the shift.

Anytime option

Validation is for any time during the shift that can be approved. This option could result in the entire shift being approved or multiple periods during the shift being approved.

For all the following examples, the shift is from 8 A.M. to 5 P.M.

- Example 1: There are no validation failures for the entire shift. The request is approved for 8 A.M. to 5 P.M.
- Example 2: There are no hours in the time-off pool from 8 A.M. to 12 P.M., and there is a calendar event to avoid. The request is approved for 12 P.M. to 2 P.M.
- Example 3: There are no hours available in the time-off pool from 9 A.M. to 12 P.M, and there is a scheduled calendar event to avoid from 2 P.M. to 5 P.M. The request is approved for 8 A.M. to 9 A.M. and 12 P.M. to 2 P.M.

Confidential and Proprietary Information of Verint Systems Inc.

- Example 4: There are no calendar events to avoid in the shift, and there are hours in the time-off pool. However, the employee has a balance of only two hours above the required minimum hours in a pay period. The request is approved for 8 A.M. to 10 A.M., the first two hours of the shift.

Approve all shift bid requests without violations

You can automatically process and approve all shift bid requests. During processing, the first request without a violation is approved. Only one shift bid can be approved for an employee.

Requests on all Employee Request pages are processed. Requests are processed based on the sort order. Processing starts with the request at the top of the first page and continues to the next request until all requests on all pages are processed.

If needed, shift bid requests can be manually approved or denied.

Before you begin

Create a shift bidding auction (page 199)

Procedure

1. Go to **Request Management**. Under **Employee Requests**, select **Employee Requests**.
2. Use a filter for shift bidding with a status of pending.
3. To set the processing order, sort by one of the following columns:
   - **Rank**
   - **Seniority**
4. Click **Approve All Shift Bid Requests without Violations**.
5. To confirm that you want to process all requests in the filter, click **OK**.

   During processing, the status is displayed above the Employee Request list and on the Approve All Shift Bid Requests without Violations button.

   After processing is complete, you will either receive a message stating how many requests were approved or a message stating there are no requests available to approve.

Withdraw an approved shift bid

When needed to resolve a problem, you can withdraw an approved shift bid for an employee. Then, the employee can submit more shift bid requests.

Procedure

1. Go to **Request Management**. Under **Schedule Auctions**, select **Employees**.
2. Select an employee with an approved shift bid request.
3. Click **Withdraw Approved**.

   The Status is changed to **0 bids**.

View the Time Off Calendar

View the time-off calendar to view time-off activity for either an organization or a time-off pool. Separate calendar views are available for daily allocation hours and interval allocation hours.

Daily Allocations view (default)

Use this view to display the calendar for daily time-off activities (such as vacation or personal days). A set number of hours are available for the 24-hour day for employee time-off.

Interval Allocations view

Use this view to display the calendar for interval time-off activities (such as voluntary time-off). A set number of hours are available for segments of time during the 24-hour day. The available hours vary by the time of day. The segments can be for as little as 15 minutes.

Before you begin

Decide if you want to view the time-off calendar for an organization or a time-off pool.

- When you view the time-off calendar for an organization, you can view the hours pending and hours scheduled. Multiple time-off pools can belong to the same organization. The values for an organization show the *total* number of pending and scheduled time-off hours for *all time-off pools* in that organization.
- When you view the time-off calendar for a time-off pool, you can view the hours allocated, hours pending, and hours scheduled.

Procedure

1. Go to **Request Management**. Under **Time Off Calendar**, select **Time Off Calendar**.
2. If you want to view the time-off calendar for an organization, do the following:
   a. From the left pane, click an organization.
   b. Click **View Organization**.
3. If you want to view the time-off calendar for a time-off pool, do the following:
   a. From the left pane, click an organization.
   b. From the **Time-Off Pools** list, select a time-off pool.
   c. Click **View**.
      The daily allocations view of the time-off calendar is displayed. By default, the system displays the time-off activity for the current and next month.
4. Optional: To view time-off activity for period, change the Time-Off Calendar month and year box as needed.

   Interval Allocations view

   You can switch to the time-off calendar for interval time-off activity.
5. To view the interval allocations time-off calendar, in the **View** box, click **Interval Allocations.**

Confidential and Proprietary Information of Verint Systems Inc.

The interval allocations view of the calendar is displayed. If **na,0,0** is listed for each day, it means that an interval allocations time-off pool has not been created.

6. When needed to view full interval information, do one of the following:
   - To view information in a tooltip, move the pointer over the interval.
   - To view the information in a larger pop-up window, click in the interval box.
7. Optional: To view pending requests for time-off hours on the Employee Requests page, click the Pending Hours value (a link).
8. Optional: To view a list of employees with scheduled time-off, click the Scheduled Time Off value (a link).

Time-Off Pool page for viewing Time-Off Calendar

Use this page to select a time-off pool for viewing the associated time-off calendar. The time-off calendar shows time-off activity in a graphical format.

Column	Description
Time Off Pool	Name of the time-off pool
Description	Optional: Description of time-off pool.
Owner Organization	Name of the organization that created the time-off pool.

Related topics

View the Time Off Calendar (page 272)

Time-Off Calendar page

The Time Off Calendar page displays time-off activity for an organization or a time-off pool.

Field	Description
Above the Time-Off calendar workspace:	
(*month and year list*)	When changed, the calendar refreshes the information.
View	List includes the following options: • **Daily Allocations** (default): Time-off allocation hours are for an entire day. • **Interval Allocations**: Time-off allocation hours are for periods smaller than a day. By default, each day is populated with a 24-hour interval with zero hour allocated for time-off. Interval allocations can be as short as 15 minutes.

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Calendar workspace	
(*calendar*)	Based on the selected View allocation type, a monthly calendar is displayed showing time-off activity for either the selected organization or time-off pool. • **Daily Allocations** (default): Calendar is in the traditional table format with a box for each day in the month. • **Interval Allocations**: Calendar is a non-traditional table format. The first column lists each day of the month. The remaining columns show each of the 24 hours in a day. When an interval time-off period has been configured for a time-off pool, it is listed in the row for that date and under the appropriate time column for the period start and end time. Three values, separated by commas, are shown in the following sequence: 1 Hours Allocated (available for a time-off pool) 2 Hours Pending 3 Schedule Time Off

View the My Time Off Calendar (WCAG)

As a supervisor, you can view how many time-off hours are allocated, pending, and scheduled for a time-off pool in the **My Time Off Calendar** from the **My Home** module.

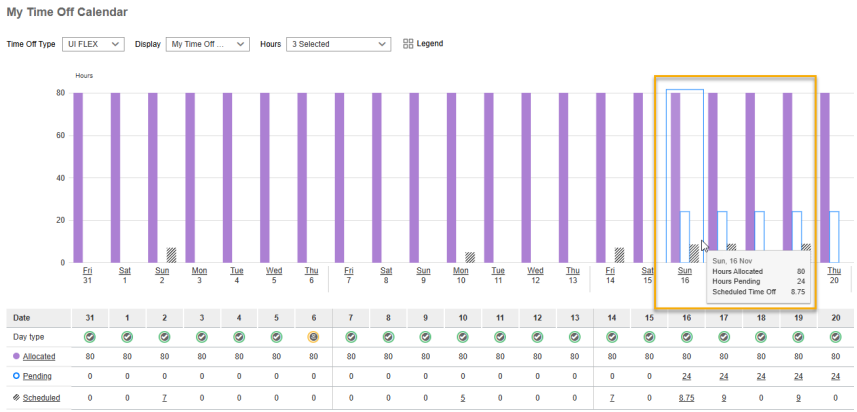
The **My Time Off Calendar** is displayed in a graphical format. Below the graph, the same information is displayed in a tabular format, including the date, time off type (displayed by icons), and the number of allocated, pending, and scheduled hours for each day. To view more details about any pending or scheduled hours for a specific date, select the relevant value.

> Viewing the My Time Off Calendar in this format from the My Home module is currently being rolled out to cloud customers. It may not be available in your site just yet.

Procedure

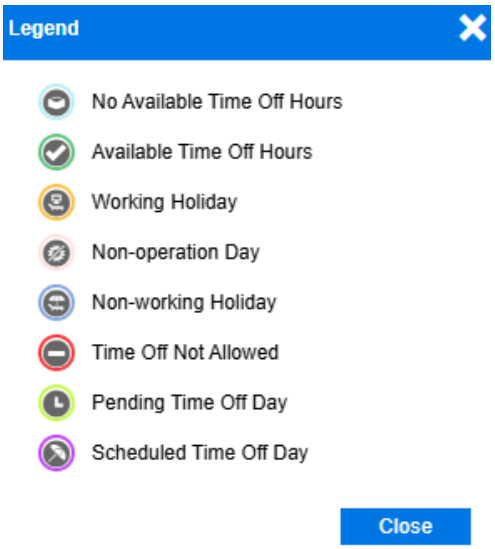
1. Go to **My Home**. Under **My Requests**, select **My Time Off Calendar**.
2. From **Time Off Type** drop-down list, select a specific time off type for which you want to view data.
3. From **Display**, select **My Time Off Pool**.
4. From **Hours**, determine the type of time-off hours that are displayed in the graph:
   - **Allocated**: Displays the total time off hours allocated in the time off pool.
   - **Pending**: Displays the total time off hours for everyone in the time off pool that have not been approved or denied.
   - **Scheduled**: Displays the total time off hours approved for everyone in the time off pool.

   The system displays the type of time-off hours you selected in the graph:

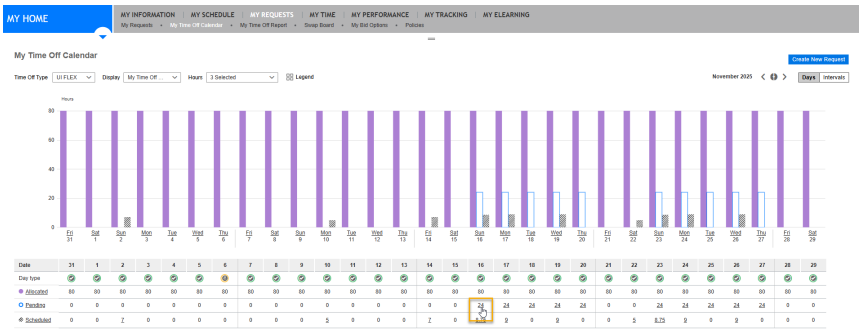


5. Optional. To view the legend, which displays the icons that represent the time-off type displayed on the second row of the table beneath the graph, select the **Legend**.

Confidential and Proprietary Information of Verint Systems Inc.

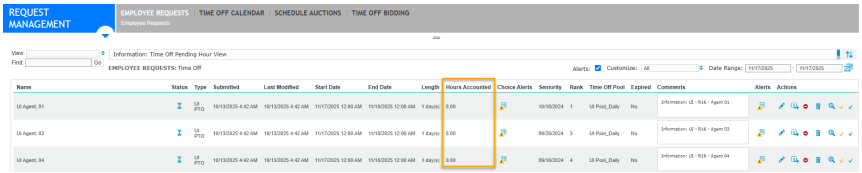


6. From the date selector, jump to a specific month in the selected calendar year, or select the next or previous month.
7. From the **Day** and **Intervals** switch, select to view the data on the Time Off Calendar for each day or each interval within each day.
8. To drill down and view more information about a **Pending** value for a specific date, select the value. (The **Pending** value is underlined.)



The system navigates to the **Request Management** module, under **Employee Requests**. It displays all the **Pending** requests that make up the total number displayed on the **My Time Off Calendar** in the **My Home** module.

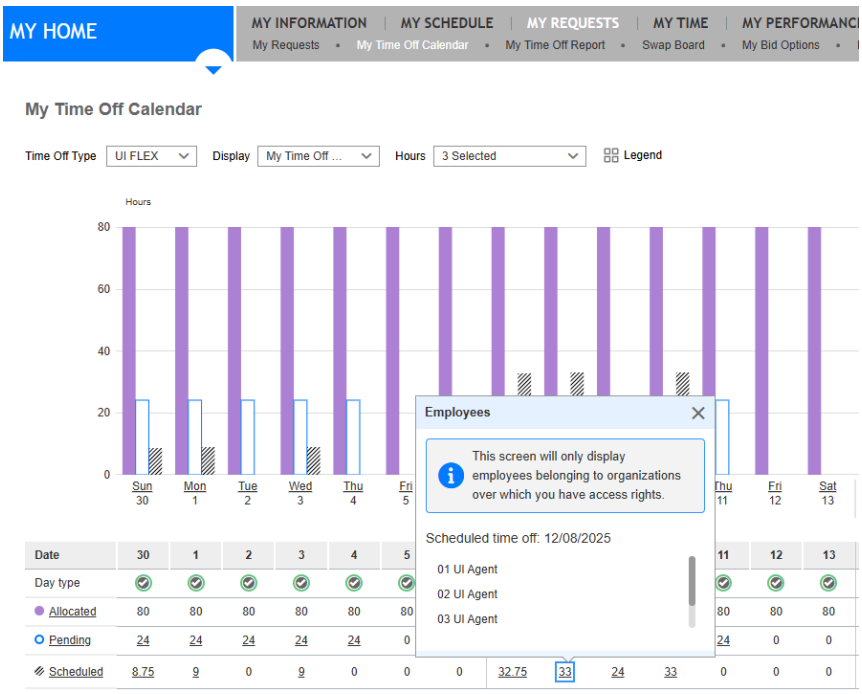
For example, on the My Time Off Calendar, on November 16, the **Pending** time-off hours are 24. When you select this value, the system goes to the **Employee Requests** page, and displays only the **Pending** requests for November 16. From here, you can see how the 24-hour value is made up of 3 requests of 8 hours each. Depending on your permissions, you can also manage each request (such as selecting to approve, deny, and withdraw the request).



Confidential and Proprietary Information of Verint Systems Inc.

9. To drill down and view more information about a **Scheduled** value for a specific date, select the value. (The **Scheduled** value is underlined.)

   The system displays the employees who have scheduled time-off hours on the selected date. For example, on the My Time Off Calendar, on December 8, the **Scheduled** time-off hours are 33. When you select this value, the system displays a pop-up window, displaying all of the employees who have scheduled time-off hours on December 8.



> The list only includes employees belonging to organizations over which you have access rights.

View time-off summary information

You can view a year of time-off summary information for one or more employees. Information is available for each time-off type.

Some options vary depending on whether you selected one employee or multiple employees.

Procedure

1. Go to **Tracking**. Under **Roster**, select **Time Summary**.
2. To select employees, do one of the following:
   - To view information for one employee, in the left pane, click the employees name.
   - To view information for multiple employees, in the left pane, select the employees and click **View**.

Viewing options for one employee

- To view information for a different year, in the **Time-off Summary (Hours) for Year** list, choose another year from the list of years for this employee.

Viewing options for multiple employees

- To view information for a different year, use the date selector (upper-right area of page) to choose the starting date for another year.
- To change which of the selected employees are shown, on the lower-left area of the page, use the Viewing **Person** options.
  - To move through the information for each of the selected employees, use the next and previous arrows.
  - To change the number of selected employees that you view, use the up and down arrows.
- To hide the information for an employee, click the arrow on the left of their name. To show the information again, click the arrow again.

Related topics

Time Summary page (page 278)

Time Summary page

This page shows the time summary data for each of the selected employees.

- If only a single employee is selected, a year selector appears in the page title area. This selector lists the years for the selected employee. When the yearly selection changes, the page is updated with the time summary information for that year.
- If multiple employees are selected, a date selector is shown at the upper right of the page. After you have selected a date, the page is updated so that, for each employee, the calendar year that includes the selected day is shown in the work pane.

Confidential and Proprietary Information of Verint Systems Inc.

- If Time Off Accrual is enabled for any of the selected employees' organizations, the summary table also includes the time-off accrual-related columns. Also, in the employee container title area, there is a link to Time Off Accrual Calculator, to display the number of accrued hours at a specified date.

Time Off Summary (Hours) for year <*selected year*> as of <date> section

For each employee selected, the workspace displays the information for a year.

If Time Off Accrual is enabled for any of the selected employees' organizations, the summary table also includes the time-off accrual-related columns. Also, in the employee container title area, there is a link to Time Off Accrual Calculator, to display the number of accrued hours at a specified date.

Column	Description
Time Off Type	Either the Time Off type or Activity type depending on the settings. If Time Off Accrual is configured at the Activity Type level, the activity type is shown with all the underlying activities indented below it.
Total	Total available hours at the end of the year. These hours are calculated based on the carry over from the previous year plus the accrued hours of the current year.
Starting Balance	Accrued hours at the start of the current year. This value is based on the last available balance from the previous year.
Used	Total hours used by the current date.
Scheduled	Hours scheduled by the *as of* date.
Pending	Hours pending by the *as of* date.
Estimated Remaining	Total scheduled hours from now until the end of the selected year.

Required Hours (balance) for Pay Period section

For each selected employee and the selected pay period, this section shows the following information when appropriate:

Column	Description
Current Hours	Number of hours worked in the current pay period.
Minimum Required Hours	Number of minimum required hours in a pay period.
Balance	Number of hours needed to meet the Minimum Required Hours for the Pay Period. (The Minimum Required Hours minus the Current Hours.)

It is available when the track required pay period hours feature is used by the selected employees organization.

This setting is on the **Settings** page, under the **Required Pay Period Hours** section. This page is located on **Organization Management**, under **Request Management**

Confidential and Proprietary Information of Verint Systems Inc.

Flex Time Summary section

For each of the selected employees, this section shows the following information when appropriate:

Column	Description
Request Approved	Number of approved flex time requests.
Limit	Maximum number of flex time requests.
Remaining this <quarter or month>	Number of flex time requests that can be submitted in the specified time period.

It is available when the following flex time validation rule is selected for the employee's organization:

Maximum number of <*number*> Flex Time Request per <Month or Quarter>.

This rule is set on the **Validation** page, under the **Flex Time Request** section. This page is located on **Organization Management**, under **Request Management**.

One Way Shift Swaps section

For each of the selected employees, this section shows the following information when appropriate:

Column	Description
Request Approved	Number of approved one-way shift swap requests.
Limit	Maximum number of one-way shift swap requests that can be approved.
Balance	Number of one-way shift swap requests that can be approved in the specified time period.

It is available when the following Shift Swap Request Validation rule is selected for the employee's organization:

Maximum number of <*number*> one-way shift swap requests per <Month or Quarter>.

This rule is set on the **Validation** page under the **Shift Swap Request Validation rules** section. This page is located on **Organization Management**, under **Request Management**.

Time Bank section

Column	Description
Time Bank Name	Name of the time bank.
Target Hours	Total number of hours that are required to work for the entire Time Bank period.
Target Hours (up to <date>)	The pro-rated number of hours that your are required to work in the period from the beginning of the Time Bank to the *up to* date which is the end of the last fully-published period that intersect the time-bank period. If the schedule period ends after the time bank, the time bank end date is used as the *up to* date. The *up to* date is shown in parentheses after the column heading.

Confidential and Proprietary Information of Verint Systems Inc.

Column	Description
Scheduled Hours (up to <date>)	Number of hours scheduled in the period from the beginning of the time bank to the *up to* date.
Adjustments	Any schedule adjustments made between the time bank's start date and the *up to* date.
Balance	Number of Scheduled hours at the *up to* date plus any Adjustments minus the Target Hours at the *up to* date.

Bottom of workspace

Chapter 12

Submitting requests for employees

When employees cannot submit a request, you can submit one for them.

Shift swaps requests are the only exception. Only employees can submit these requests or post on the swap board.

Topics

Create a time-off request for an employee 284

Create a flex time request for an employee 289

Create a shift request or a change request for an employee 292

Submitting shift bids for auctions (for employees) 296

Create a time-off request for an employee

When employees cannot submit their own time-off requests, you can create the requests for them.

Multiple time-off choices can be entered, but only one choice can be approved. Choices are processed from top to bottom, so they need to be ranked by preference.

Voluntary Time Off options

Some time-off types (activities) for VTO provide five Advanced VTO options on the request form. If the employee is flexible and you select multiple VTO options, the request is more likely to be approved.

When multiple VTO options are selected, the options are processed in the same order as they are listed on the request form. Each selected option is processed until one option is approved or all selected options are denied.

Procedure

1. Go to **Request Management**. Under **Employee Requests**, select **Employee Requests**.
2. Click **Create New Request**.
3. From the pop-up window, click **Create New Request**.
4. From the **Create New Request** pop up, select **Time-Off**.
5. Under the **Request Summary** section, do the following:
   a. Select an employee.
   b. Select the time-off type.
   c. If the time-off type has multiple VTO options, select any or all the options.
   d. Select how you want the time-off to affect the regularly scheduled hours.
   e. Optional: Add a comment.
6. Under the **Time-Off Choices** section, do the following:
   a. To specify a date and time range for your time-off choice, use the date selector.
   b. Optional: To add another time-off choice, click **Add**.
   c. To ensure that multiple choices are sorted in order of preference, click a choice and use the **Move Up** or **Move Down** button (top-most preferred choice, bottom-least preferred).
7. Optional: To help you make your time-off choices you can view the time-off calendar for two, consecutive months. The following options are available.
   - To change the months, use the month and year lists.
   - To view the time-off calendar legend, click **Legend**.
8. Click **Save**.

   The request appears on the **Employee Requests** page. You can manage it like any other request (such as selecting to approve or deny it).

Time Off request form (for employees)

Use the time off request form to create a request for a time off activity.

Field	Description
Request Summary	
Employee Name	Name of the employee. *This field is available when someone is creating the request for an employee.*
Time off type	Specifies the type of time off request. Values include activities that the administrator has configured as time that can be requested off. Examples include: • Floating Holiday • Personal Day • Sick • Unavailable • Vacation • Voluntary Time Off
Advanced VTO Options	When the selected time off type has multiple Voluntary Time Off choices, the following options are available. • **Full Day**: Requests VTO for your entire shift. • **Partial Day**: Requests VTO for a specific start time and length of time. • **Late Start**: Requests VTO by starting your shift as late as possible. • **Early Off**: Requests VTO by ending your shift as early as possible. • **Anytime Off**: Requests VTO at anytime during your shift.

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Time off hours	Specifies how you want the time off request to affect the regularly scheduled hours. For all the Time Off types except **Unavailable**, the possible choices are: • **Use my time off hours to schedule my absence**: Indicates to use the allocated time off hours and work fewer hours than the full schedule for that week. • **Schedule around my time off request if possible**: Indicates to schedule the employee as needed, except for the time requested off. This option is *only* useful: ▪ When the employee has flexibility in their work rules ▪ Time off is being requested *before* the schedule is run For **Unavailable**, the choice is: • **Mark as unavailable and schedule around this time**: Indicates to schedule the employee for the full number of work hours, working around the time marked as unavailable. **Example: Schedule around my time off request if possible** • You work an 8-hour schedule but the start time is flexible. • You submit a time off request from 4:00-6:00 PM for an appointment. • Due to the flexible start time, the scheduling engine comes up with schedule for you to work from 7:00-4:00. This schedule allows you to have your full eight hours without using up any of the times off. The time off hours appear on the calendar. However, the hours do not get used from your allocation because there is no scheduled shift under it. **Example: Use my time off hours to schedule my absence** • You work an 8-hour schedule but the start time is flexible. • You submit a time off request from 4:00-6:00 PM for an appointment. • The scheduling engine attempts to schedule your shift from 9:00-6:00 (or something else that overlaps the time off). Your regular work hours are reduced and the time off is used out of your allocation.
Add to waitlist if not approvable	If time off waitlists are used, this check box is available. If your request is not approved, this option indicates whether to waitlist the request. Your organization can choose to make this option selected by default. When you do not want your unapproved requests to be waitlisted, you can clear this check box.
Comments	Allows you to add comments about the time off request.

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Expiry Date	If time off waitlists are used, this check box is available. Optional: Specifies until what date the request is valid. You can type any date (after the current date) here. If you do *not* type a date, the system updates the expiry date to the request start date. Requests are marked invalid once they are past the request start date.
Time Off Choices Date Ranges	
Start Date	Start date of the time off request.
Start Time	Start time of the time off request.
End Date	End date of the time off request.
End Time	End time of the time off request.
Length	Displays the length of the time off request in days or hours as appropriate.
Hours Accounted	Displays the number of the time off hours in the request based on the scheduled shift.
Choice Alerts	Displays any alerts displayed for the request.
Actions	Displays any relevant actions you can take for the added time off choice (such as **Delete**, **Move Up**, or **Move Down**).
Time Off Calendar	
Time Off Calendar	Allows you to help plan your time off requests. The Time Off Calendar is displayed in graph format, where you can view the number of available, pending, or scheduled time-off hours for each day in the selected month.

Confidential and Proprietary Information of Verint Systems Inc.

Create a flex time request for an employee

When an employee cannot create their own request, you can create a flex time request to take off during a published shift and specify make-up time on a corresponding shift extension or a non-working day.

Procedure

1. Go to **Request Management**. Under **Employee Requests**, select **Employee Requests**.
2. Click **Create New Request**.
3. From the **Create New Request** pop-up window, select **Flex Time**.
4. In the **Request Summary** section, do the following:
   a. Select the employee.
   b. Select the time off type.
   c. Optional. Add a comment.
5. In the **Time Off Choice** section, click the calendar icon to specify the date range for the flex time.
6. In the **Flex Makeup** section, select a date for making up time.
7. Make-up time on a day *with* a scheduled shift: Under **Flex Makeup**, complete the fields: **Extension**, **Activity**, **Duration**, and **Makeup Gap**.
8. Make-up time on a day *without* a scheduled shift (a non-working day): Under **Shift**, complete the fields: **Start**, **Activity**, and **Duration**. (In the **Name** field, the system displays Non-working day.
9. If you need to define another Flex Makeup event, select **Add**.

   The **Hours Accounted** in the **Flex Makeup** section must equal the **Hours Accounted** in the **Time Off Choice** section.

10. Optional. If you need to check the accrual of **Time Off**, select **Calculate Estimate** before saving the request.
11. Select **Save**.

    Any alerts that indicate messages relating to the request display in the lower, left area of the page.
12. When all changes have been completed, click **Done**.

Flex time request form (for employees) (page 289)

Flex time request form (for employees)

Use the flex time request form to create a request to take time off during an approved shift and specify when to make up the time taken.

Field	Description
Request Summary	

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Employee Name	Name of the employee. *This field is available when someone is creating the request for an employee.*
Time Off Type	Indicates the time off type (activity) for this request.
Comments	Text of any comments added by the manager or employee.
Time Off Choice	
Time Off Start Date	Start date and time of the time off request.
Time Off End Date	End date and time of the time off request.
Time Off Length	Displays the duration of the requested time off.
Hours Accounted	Displays the number of the employee time off hours in the request. For example, a flex time request is for three hours. One of the three hours is during lunch. Therefore, the time listed in this column is 02:00.
Time Off Calendar	
Time Off Type	Changes the starting month of the time off calendar. By default, the current month and year are selected.
Hours	Allows you to filter the Time Off Calendar by **Available**, **Pending**, and **Scheduled** time-off hours.
Legend	Defines the icons that are represented in the **Day type** row at the bottom of the graph. Each day is represented by a specific icon, indicating the time-off hours information for that day. For example, this icon indicates that the specified date has available time-off hours. This icon indicates that the specified date has no available time-off hours.
Date	From the date selector, you can **Jump to** a specific month in the selected calendar year, or you can select the next or previous month.
Days / Intervals	You can select to view the data on the Time Off Calendar for each **Day** or each **Interval** within each day.
Flex Makeup	
Date	Date of the makeup time.
Shift Name	Name of the shift.
Start	Start time of the shift.
Shift Activity	Activity of the shift.
Shift Duration	Total length of the shift.

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Extension	Indicates when the makeup time will occur. Select either **Extension Before Shift** or **Extension After Shift**.
Makeup Activity	Indicates the activity during the makeup time. The list of activities that appear in this drop-down field and are available for selection are the activities defined in the employee's work pattern.
Makeup Duration	Indicates the duration of the makeup time. By default, the **Duration** field contains 0.15 and the **Hours Accounted** contains 00:15 at the end of the current shift.
Makeup Gap	Indicates the desired gap between the start of the shift gap and the start of the makeup time. Example: The scheduled shift has a Gap from 2:00 to 4:00 with a Makeup Gap of 1 hour. The employee is making up 30 minutes. Therefore, the Makeup Shift starts at 3:00.
Actions	Displays any relevant actions you can take for the added flex makeup time (such as **Delete**).
Alerts	
Alert	Summary of the alert.
Description	Description of the alert.

Create a shift request or a change request for an employee

When an employee cannot create their own request, you can create either a new shift request or a change request for an existing shift.

You can create and submit the following types of shift requests:

- New shift request
- Overtime (OT) request (regular shift marked as OT).
- New shift request with an extension before a shift, after a shift, or during a gap.
- Updated shift request for an existing shift - shorten or extend the length of the shift by:
  - Selecting a different shift
  - Adding extensions before a shift, after a shift, or during a gap
  - Changing the shift type or shift start time

Procedure

1. Go to **Request Management**. Under **Employee Requests**, select **Employee Requests**.
2. Click **Create New Request**, and **Shift Request & Change**.
3. Click **Create New Request**.
4. From the **Create New Request** dialog box, select **Shift Request & Change**.
5. Complete the fields on the **Create New Request** form.
6. Click **Save**.

   The request appears on the **Employee Requests** page. You can manage it like any other request (such as selecting to approve or deny it).

Shift Request & Change form (for employees)

Use this form to create a request a new shift or to change an existing shift.

Shift

Setting	Description
Employee Name	Only available when someone is creating a request for an employee.
Start Date	Indicates the start day of the shift. After a day is selected, the system can determine whether the request type is: • **New Shift** (if there is not already a shift on that day) • **Shift Change** (if there is already a shift on that day) Whenever you change the day, the rest of the page is reloaded with the details for that day.
Start Time	Indicates the start time of the shift. By default, this option can be used to either set or change the start time of the shift. Shift changes only: If the **Start Time** box is unavailable, it means that your system administrator has chosen to prevent changes to the start time on existing shifts.
Shift	Lists the available shifts for selection using your available work patterns, and the shift already assigned to you on that day (if any).
Duration	Numeric read-only box. This option is pre-populated with the duration from the work pattern of the selected shift.
End Date	Read-only date/time display calculated dynamically using the start date, start time, and duration.
Activity	List of activities available to be requested. For a New Shift request: • When the dialog is opened from the Net Staffing ribbon on the schedule page, it only lists activities that have a Net Staffing shortage. • The default selection is the activity linked to the queue with the greatest shortage. However, when coming from the Requests page, there is no Net Staffing context, so you can request any activities at any time. In addition to listing the available activities, the list also includes the activity that the employee is already scheduled for on that day (if any). You cannot change the activity for a Shift Change request.

Confidential and Proprietary Information of Verint Systems Inc.

Setting	Description
Mark Entire Shift as Overtime	Marks the entire shift as overtime (OT). When checked, the **Extension Before Shift** and **Extension After Shift** sections are *not* available, and you are not able to request an extension to the shift.
Comment	Allows you to add comments about the shift request.

Extension Before Shift

When the organization allows requests for extensions before a shift and the shift has one or more available extensions, the fields in this section are available.

Field	Description
Type	Specifies the type of shift request.
Activity	Specifies the activity for the extension.
Duration	Numeric read-only box. This option is pre-populated with the duration from the work pattern of the selected shift.
Gap	Specifies the length of time between the *end* of the extension and the *start* of the shift.
Overtime	Indicates whether this request is overtime.

Extension After Shift

When the organization allows requests for extensions after a shift and the shift has one or more available extensions, the fields in this section are available.

Field	Description
Type	Specifies the type of shift request.
Activity	Specifies the activity for the extension.
Duration	Numeric read-only box. This option is pre-populated with the duration from the work pattern of the selected shift.
Gap	Specifies the length of time between the *end* of the shift and the *start* of the shift extension.
Overtime	Indicates whether this request is overtime.

Extension During Shift

When the organization allows requests for extensions during a shift gap or an adjustable break, and the shift has one or more available extensions, the fields in this section are available.

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Extension	When either extensions in gaps or adjustable breaks are available, the list shows the activity name, and start and end time for each one.
Type	Specifies the type of shift request.
Activity	Specifies the activity for the extension.
Duration	Numeric read-only box. This option is pre-populated with the duration from the work pattern of the selected shift.
Extension Gap	Specifies the length of time between the start of the shift gap and the start of the shift extension.

Alerts

Field	Description
Alerts	Alerts configured for this request.
Description	Details of the alerts.

Confidential and Proprietary Information of Verint Systems Inc.

Submitting shift bids for auctions (for employees)

In a shift bid auction, you can submit bids for employees for the shifts that they prefer to work.

The schedules you can select, and the number of requests you can submit for each auction, depend on the type of auction defined for the employee.

The types of auctions include the following:

- **Combination of Individual Shifts auction**: Allows you to create a custom schedule by selecting *one* shift for each working day you want in the scheduling period. In this type of auction, you can select one or more bid options, but *once the request is approved, if Continuous Bidding is not enabled, you cannot submit any additional bid requests*. Before the request is approved (for example, if it's in a Pending state), you can submit a single request multiple times. (If Continuous Bidding is enabled, you can submit a single request multiple times.)
- **Multiple Shifts per Day auction**: Allows you to create a custom schedule by selecting *multiple* shifts for each working day you want in the scheduling period. You can also add extra work time to an existing shift. Similar to the **Combination of individual shifts** auction, you can select one or more bid options, but *once the request is approved, if Continuous Bidding is not enabled, you cannot submit any additional bid requests*. Before the request is approved (for example, if it's in a Pending state), you can submit a single request multiple times. (If Continuous Bidding is enabled, you can submit a single request multiple times.)
- **Full Schedule Period auction**: Allows you to select a *fixed* schedule for working and non-working days for the entire period. You *cannot* create a custom schedule for the scheduling period. Depending on auction configurations, you can either submit a single request or multiple requests that contain all of your selected bid options. (Only one request is approved.) Also depending on auction configurations, you can group bid options by similar attributes, such as shift start and end time, non-working days, primary shift activity, and organization.

Submit a single shift bid request for a Multiple Shifts per Day auction (for employees) (page 300)

Submit a single shift bid request for a Full Schedule Period auction (for employees) (page 303)

Submit multiple, non-grouped shift bids for a Full Schedule Period auction (for employees) (page 309)

Submit multiple, grouped shift bids for a Full Schedule Period auction (for employees) (page 312)

Submit a single shift bid request for a Combination of Individual Shifts auction (for employees)

For a **Combination of Individual Shifts** auction, create a custom schedule by selecting *one* shift for each working day you want in the scheduling period.

In this type of auction, you can select one or more bid options, but *once the request is approved, if Continuous Bidding is not enabled, you cannot submit any additional bid requests*. Before the request is approved (for example, if it's in a Pending state), you can submit a single request multiple times. (If Continuous Bidding is enabled, you can submit a single request multiple times.)

Confidential and Proprietary Information of Verint Systems Inc.

For example, you can select the following:

- One shift on Monday from 8:00 AM - 5:00 PM.
- One shift on Tuesday from 9:00 AM - 6:00 PM.
- One shift on Thursday from 7:00 AM - 3:00 PM.
- One shift on Friday from 7:30 AM - 2:30 PM.
- You do *not* want to work on Wednesday, Saturday, and Sunday, so you do *not* select any shifts on these days.

Procedure

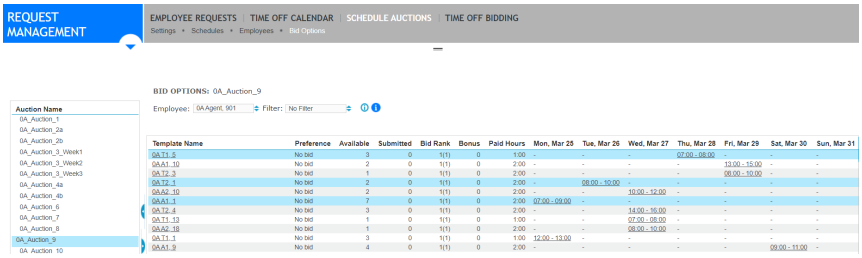
1. Go to **Request Management**. From **Schedule Auctions**, select **Bid Options**.
2. From the **Auction Name** column, select the auction you want.
3. From the **Employee** drop-down list, select the employee for whom you want to submit a single shift bid request for a **Combination of Individual Shifts** auction.
4. Optional. To limit the bid options displayed in the list, select a filter from the **Filter** drop-down list.
5. Optional. To view the skills required for a shift, from the **Template Name** column, select a shift template.

   The system displays the skills and their proficiencies required for the shift. To return to the **My Bid Options** screen, select **Done**.
6. Optional. To view the details of a shift, select the shift from the date column that displays the shift time range.

   The system displays the shift template name, time range, activities, and shift events for the shift.
7. Select the rows of the shift templates you want for the relevant days in the scheduling period.

   For a **Combination of Individual Shifts** auction, *you can only select one shift for each day*. You *cannot* select two shifts that occur on the same day.

   For example, you want to submit a shift bid request for shifts on Monday through Friday of the scheduling period. Therefore, select one shift template for a Monday shift, one shift template for a Tuesday shift, and one shift template for a Wednesday shift. You *cannot* select two different Monday shifts.



8. Select **Create**.
9. On the Shift Bid Request form, complete the following fields:

Confidential and Proprietary Information of Verint Systems Inc.

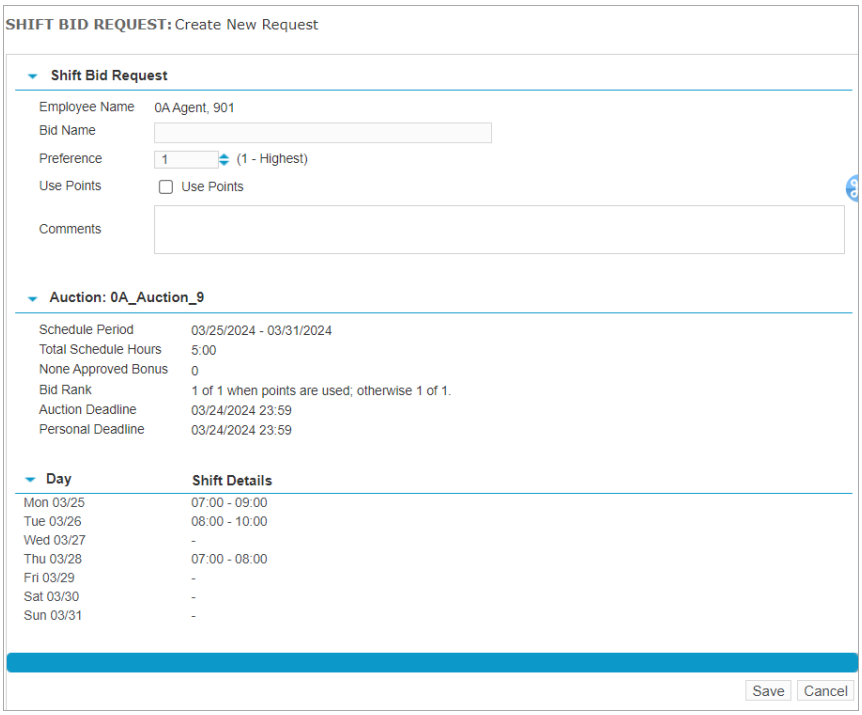
a. **Bid Name**: Name that describes the shift bid request.

b. **Preference**: Preference or priority of the shift bid request (1 is the highest preference.)

c. **Use Points**: Optional. When an auction is configured to use bonus points, select this check box to use bonus points for the shift bid request. Using points can affect the rank of shift bid requests.

d. **Comments**: Optional field to include comments about the shift bid request.

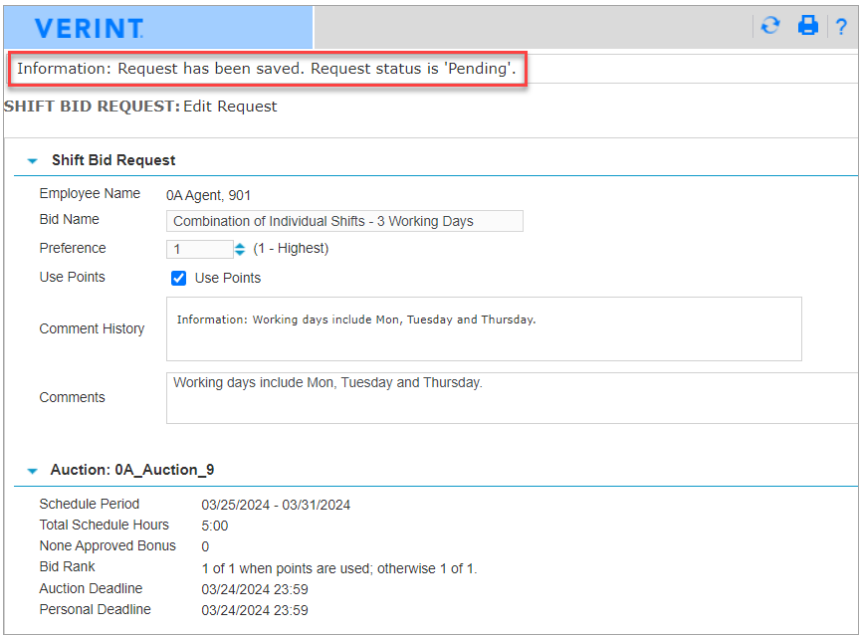
10. View the details about the selected auction, and the shifts you selected on your working days. For non-working days, a hyphen (**-**) appears.



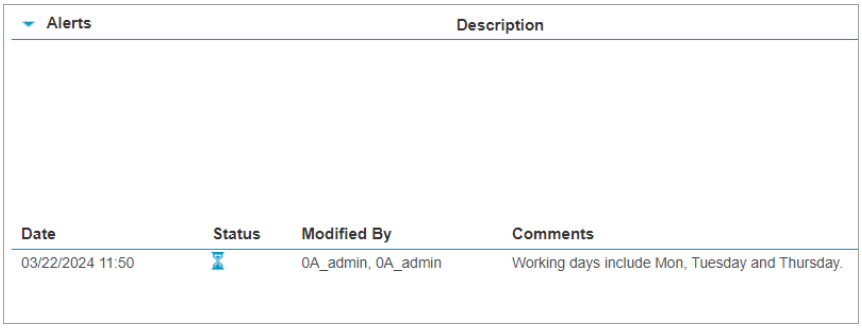
11. Select **Save**.

    The system saves your shift bid request, and updates the status of the request.

Confidential and Proprietary Information of Verint Systems Inc.



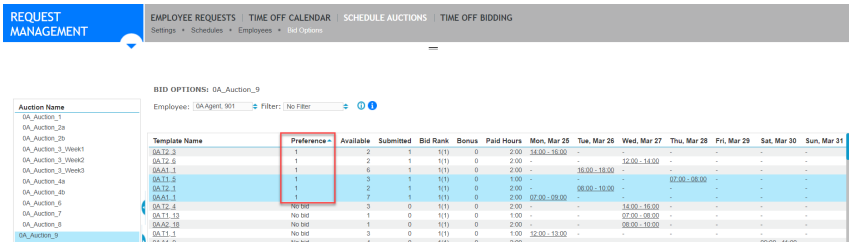
In addition, it now displays any alerts, and a history of updates related to the shift bid request.



12. Review your bid. If needed, you can edit the **Bid Name**, **Preference** and **Comments** fields, and select **Save**.
13. When you have finished with all changes to your shift bid request, select **Save** and **Done**.

> To view all of your preferences in the **Preference** column at the top of the list, sort by the **Preference** column.

The **Bid Options** page is updated with the preferences saved for the submitted bids.



Confidential and Proprietary Information of Verint Systems Inc.

> After a bid is submitted and the bid status is **Pending** or **Escalated**, you can change the preference value of the bid and resubmit it.

Bid Options columns for single shift bid requests (for employees) (page 308)

Submit a single shift bid request for a Multiple Shifts per Day auction (for employees)

For a **Multiple Shifts Per Day** auction, create a custom schedule by selecting *multiple* shifts for each working day you want in the scheduling period. You can also add extra work time to an existing shift. This type of auction is helpful when you want to add extra work hours to an employee's already scheduled shifts, and to allow more flexibility in their schedule.

Similar to the **Combination of individual shifts** auction, you can select one or more bid options, but *once the request is approved, if Continuous Bidding is not enabled, you cannot submit any additional bid requests*. Before the request is approved (for example, if it's in a Pending state), you can submit a single request multiple times. (If Continuous Bidding is enabled, you can submit a single request multiple times.)

For example, you can select the following:

- Two shifts on Monday: one from 7:00 AM - 12:00 PM, and one from 2:00 PM - 6:00 PM.
- Three shifts on Wednesday: one from 7:00 AM - 9:00 AM, one from 11:00 AM - 1:00 PM, and one from 1:00 PM - 3:00 PM.
- One shift on Sunday from 9:00 AM - 3:00 PM.
- You do *not* want to work on Tuesday, Thursday, Friday, and Saturday, so you do *not* select any shifts on these days.

Procedure

1. Go to **Request Management**. From **Schedule Auctions**, select **Bid Options**.
2. From the **Auction Name** column, select the auction you want.
3. From the **Employee** drop-down list, select the employee for whom you want to submit a single shift bid request for a **Multiple Shifts Per Day** auction.
4. Optional. To limit the bid options displayed in the list, select a filter from the **Filter** drop-down list.
5. Optional. To view the skills required for a shift, from the **Template Name** column, select a shift template.

   The system displays the skills and their proficiencies required for the shift. To return to the **My Bid Options** screen, select **Done**.
6. Optional. To view the details of a shift, select the shift from the date column that displays the shift time range.

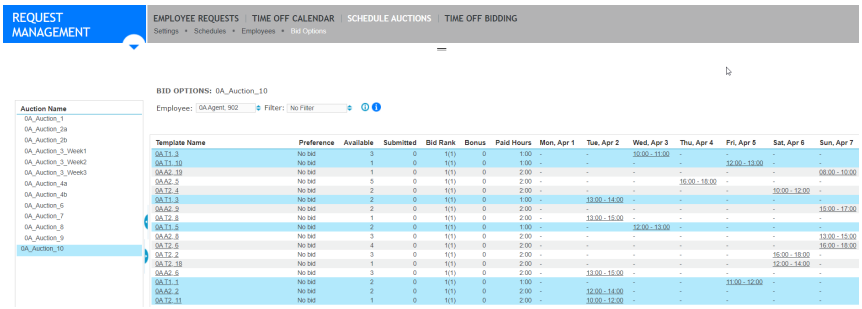
   The system displays the shift template name, time range, activities, and shift events of the shift.

Confidential and Proprietary Information of Verint Systems Inc.

7. Select the rows of the shift templates you want for the relevant days in the scheduling period. For a **Multiple Shifts Per Day** auction, *you can select multiple shifts on the same day*.

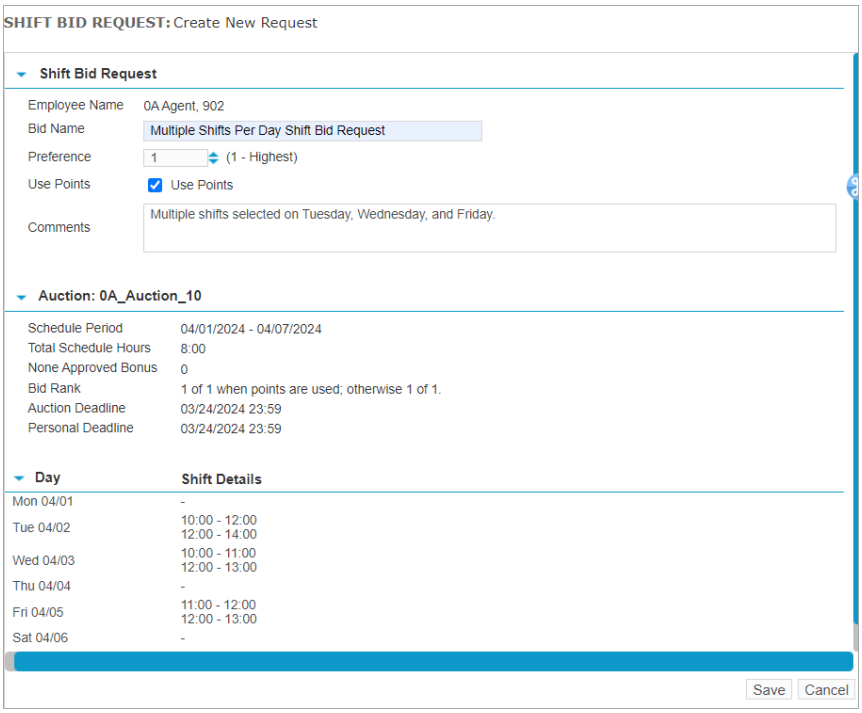
   For example, you want to submit a shift bid request for two shifts on Monday, two shifts on Wednesday, and one shift on Sunday. You do not want to work on Tuesday, Thursday, Friday, and Saturday.

   > Although you can select multiple shifts on the same day, *you cannot select shifts that overlap*. For example, you *cannot* select a shift from 2:00 PM-6:00 PM and another shift from 4:00 PM-8:00 PM.



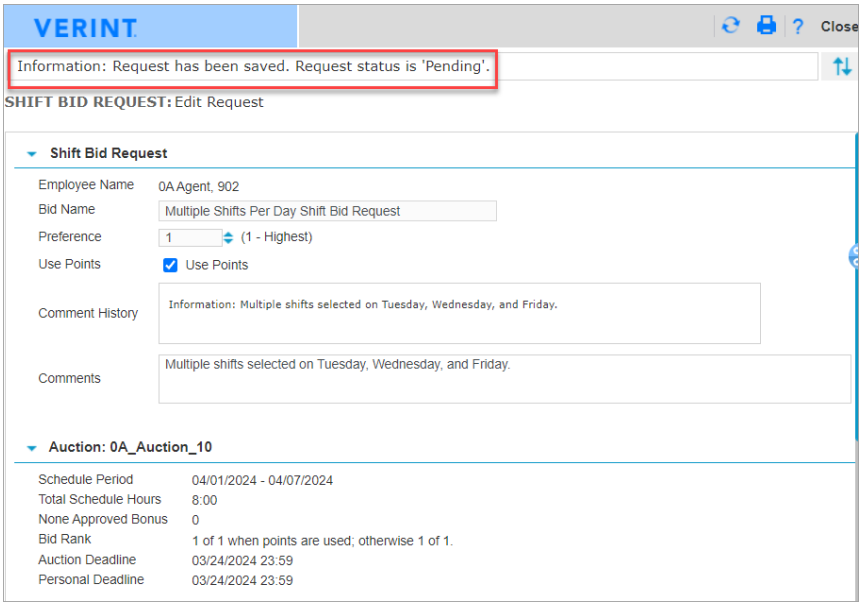
8. Select **Create**.
9. On the Shift Bid Request form, complete the following fields:
   a. **Bid Name**: Name that describes the shift bid request.
   b. **Preference**: Preference or priority of the shift bid request (1 is the highest preference.)
   c. **Use Points**: Optional. When an auction is configured to use bonus points, select this check box to use bonus points for the shift bid request. Using points can affect the rank on the shift bid requests.
   d. **Comments**: Optional field to include comments about the shift bid request.
10. View the details about the selected auction, and the shifts you selected on your working days. For non-working days, a hyphen (**-**) appears.

Confidential and Proprietary Information of Verint Systems Inc.



11. Select **Save**.

    The system saves your shift bid request, and updates the status of the request.



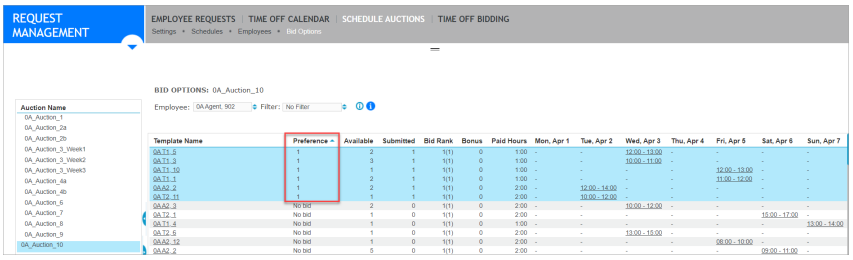
In addition, it now displays any alerts, and a history of updates related to the shift bid request.

Confidential and Proprietary Information of Verint Systems Inc.

12. Review your bid. If needed, you can edit the **Bid Name**, **Preference** and **Comments** fields, and select **Save**.
13. When you have finished with all changes to your shift bid request, select **Save** and **Done**.

> To view all of your preferences in the **Preference** column at the top of the list, sort by the **Preference** column.

The **Bid Options** page is updated with the preferences saved for the submitted bids.



> After a bid is submitted and the bid status is **Pending** or **Escalated**, you can change the preference value of the bid and resubmit it.

Related topics

Create a filter for Bid Options (for employees) (page 319)
Bid Options filter settings (for employees) (page 319)
Bid Options columns for single shift bid requests (for employees) (page 308)

Submit a single shift bid request for a Full Schedule Period auction (for employees)

For a **Full Schedule Period** auction, select a *fixed* schedule for working and non-working days for the entire scheduling period. You *cannot* create a custom schedule for the scheduling period in this type of auction. To submit a single shift bid request for a **Full Schedule Period** auction, you must submit the request in *non-grouped* shift bid mode.

For example, you can select a shift template that has the following shifts:

- Shift on Monday from 8:30 AM - 5:30 PM.
- Shift on Tuesday and Wednesday from 7:30 AM - 4:30 PM.

Confidential and Proprietary Information of Verint Systems Inc.

- Shift on Thursday and Friday from 9:30 PM - 6:30 AM (the next day).
- The shift template does *not* have any scheduled shifts on Saturday and Sunday, so these days are your non-working days for this shift bid.

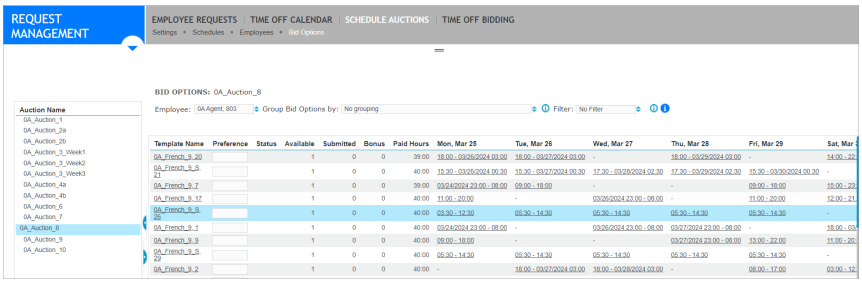
> If the auction settings define that an employee is required to submit a *minimum number of bids*, you *cannot* submit a single shift bid request for a **Full Schedule Period** auction. In that case, *you must submit multiple shift bid requests*.

Procedure

1. Go to **Request Management**. From **Schedule Auctions**, select **Bid Options**.
2. From the **Auction Name** column, select the auction you want.
3. From the **Employee** drop-down list, select the employee for whom you want to submit a single shift bid request for a **Full Schedule Period** auction.
4. Optional. To limit the bid options displayed in the list, select a filter from the **Filter** drop-down list.
5. Optional. To view the skills required for a shift, from the **Template Name** column, select a shift template.

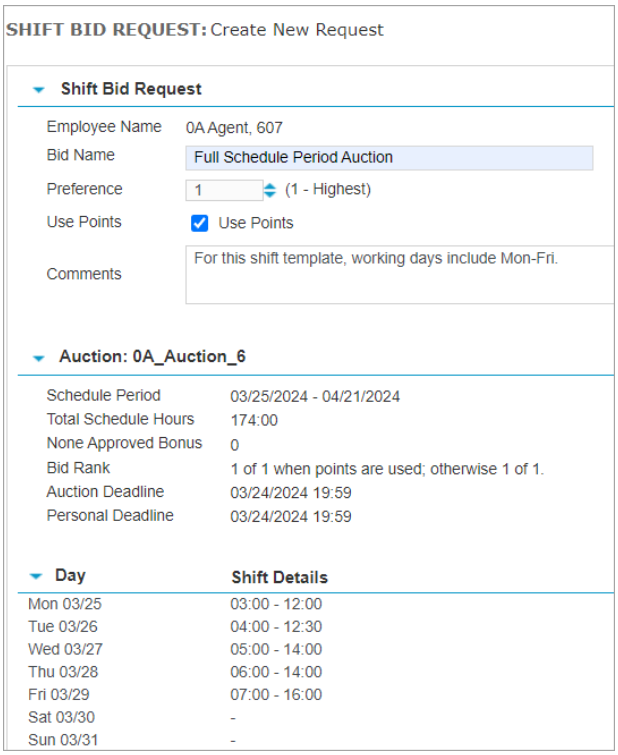
   The system displays the skills and their proficiencies required for the shift. To return to the **My Bid Options** screen, select **Done**.
6. Optional. To view the details of a shift, select the shift from the date column that displays the shift time range.

   The system displays the shift template name, time range, activities, and shift events of the shift.
7. Select the row of the shift template you want for the scheduling period. For a **Full Schedule Period** auction, you must select a *fixed* schedule for working and non-working days for the entire scheduling period.



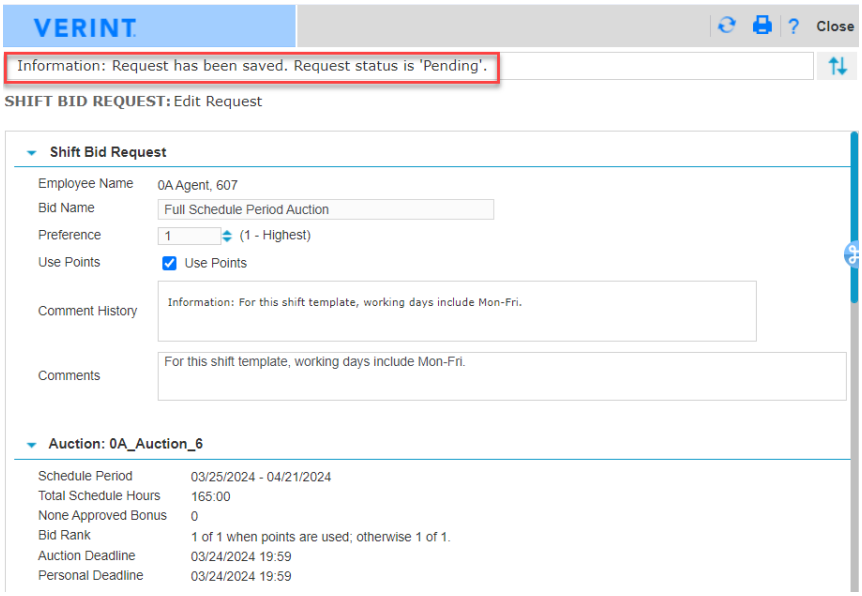
8. Select **Create**.
9. On the Shift Bid Request form, complete the following fields:
   a. **Bid Name**: Name that describes the shift bid request.
   b. **Preference**: Preference or priority of the shift bid request (1 is the highest preference.)
   c. **Use Points**: Optional. When an auction is configured to use bonus points, select this check box to use bonus points for the shift bid request. Using points might affect the rank on the shift bid requests.
   d. **Comments**: Optional field to include comments about the shift bid request.
10. View the details about the selected auction, and the shifts included in the shift template you selected. For non-working days, a hyphen (**-**) appears.

Confidential and Proprietary Information of Verint Systems Inc.



11. Select **Save**.

    The system saves your shift bid request, and updates the status of the request.



In addition, it now displays the details of your selected shifts, including shift events and calendar events on the selected days. It also displays any alerts, and a history of updates related to the shift bid request.

Shift bid request form (for employees)

Complete the fields on this form when submitting a new single shift bid request. After submitting a request, you can use this form to view or edit the details of an existing shift bid request.

Field	Description
Shift Bid Request	
Bid Name	Name that describes the shift bid request.
Preference	Preference or priority of the shift bid request (1 is the highest preference.)
Comments	Optional field to include comments about the shift bid request.
Auction	Read-only shift bid auction information, including the following: • **Schedule Period**: Date range of the scheduling period associated with the auction. • **Total Schedule Hours**: Total number of scheduled hours in the shift bid request. For example, if you selected 3 8-hour shifts on Monday, Wednesday, and Friday, the Total Schedule Hours is 24. • **Auction Deadline**: Date and time by which the auction ends. • **Personal Deadline**: Date and time by which you need to submit all shift bid requests.

After creating or editing a shift bid request and selecting **Save**, the updated and new fields appear on the form:

- **Shift Details**: Now displays detailed information about the shift events and calendar events of your selected shifts.
- **Alerts**: Displays the icons and descriptions for any failed validations related to the submitted shift bid request.
- **Date** / **Status** / **Modified By** / **Comments**: Displays a list of changes (or history) related to the shift bid request.

Bid Options columns for single shift bid requests (for employees)

When submitting single shift bid requests for auctions, specific columns are displayed that describe the shift templates available for selection.

The auctions for which these columns are displayed include the following:

- Combination of Individual Shifts auction
- Multiple Shifts Per Day auction
- Full Schedule Period auction in *non-grouped* shift bid mode

Column	Description
Template Name	Name of the shift template.
Description	Optional. Provides additional information about the template when this feature is set up.
Preference	Value that defines the user's preference or priority for the shift bid. When a preference is entered, the schedule is selected for a bid. 1 indicates the highest ranked schedule, 2 indicates the second highest ranked schedule, and so on. When more than one bid has the same preference number, the bids have equal preference. After a bid is submitted and the status is **Pending** or **Escalated**, the preference number can be changed, saved, and resubmitted. (The status can be viewed on the My Requests page.)
Status	Indicates the status of the preference for the shift bid. • **Pending**: Bid preference has been submitted. • **Saved**: Bid preference has been saved, but not submitted. • **Edited, Saved**: Bid preference was previously submitted, but has been changed and saved. The new bid preference has not yet been submitted. • **Denied**: The bid preference was submitted and denied. The preference cannot be changed. (The status can be viewed on the Employee Requests page and the My Requests page.) • (**No status shown**): A status in not available when the bid preference has been entered, but has not been saved. The preference can be changed.
Available	Number of instances of the template that have *not* yet been bid on.
Submitted	Number of bids submitted.
Bonus	Bonus points awarded for working this shift/schedule.
Paid Hours	Total number of paid hours in the template.

Confidential and Proprietary Information of Verint Systems Inc.

Column	Description
(*remaining columns*)	Starting with the current day, shows the shift start and ending times for each day.

Submit a single shift bid request for a Multiple Shifts per Day auction (for employees) (page 300)

Submit a single shift bid request for a Full Schedule Period auction (for employees) (page 303)

Submit multiple, non-grouped shift bids for a Full Schedule Period auction (for employees)

For a **Full Schedule Period** auction, select a *fixed* schedule for working and non-working days for the entire scheduling period. You *cannot* create a custom schedule for the scheduling period in this type of auction.

For only the **Full Schedule Period** auction, depending on auction configurations, you can either submit a single request or multiple requests that contain all of your selected bid options. (Only one request is approved.) When you submit multiple, non-grouped shift bids, you can set preferences for each individual shift bid.

> If there is no required minimum number of submitted requests configured for this type of auction, you can also submit a single request that contains all of your selected bid options.

Procedure

1. Go to **Request Management**. From **Schedule Auctions**, select **Bid Options**.
2. From the **Auction Name** column, select the auction you want.
3. From the **Employee** drop-down list, select the employee for whom you want to submit a single shift bid request for a **Full Schedule Period** auction.
4. From the **Group Bid Options by:** drop-down list, select **No grouping**.

   When you select this option, bid options are listed individually and *not* grouped according to similar attributes.
5. Optional. To limit the bid options displayed in the list, select a filter from the **Filter** drop-down list.
6. Optional. To view the skills required for a shift, from the **Template Name** column, select a shift template.

   The system displays the skills and their proficiencies required for the shift. To return to the **My Bid Options** screen, select **Done**.
7. Optional. To view the details of a shift, select the shift from the date column that displays the shift time range.

   The system displays the template name, time range, activities, and shift events of the shift.

Confidential and Proprietary Information of Verint Systems Inc.

8. In the **Preference** field for each relevant schedule template, enter a numeric value to indicate your preference for that schedule or shift. (For example, enter **1** for your first choice, and **2** for your second choice.)

> If there is a required minimum number of submitted requests configured for this type of auction, a message is displayed above the bid options list, indicating the total number of available schedules in your current submission. Select the number of bids needed to meet or exceed your minimum number of available schedules.

9. Select **Save Preferences**.
10. To submit your shift bid options and preferences, select **Submit Multiple Bids**.

> The **Submit Multiple Bids** option is *only* available after you select **Save Preferences**. In addition, if the auction requires a minimum number of bids, you must enter preference values for the required minimum or more number of bids.

11. When prompted to continue, select **OK**.

    On the **Employee Requests** page, your preferences are saved for the submitted bids, and the system updates the status of the requests.

> After a bid is submitted and the bid status is **Pending** or **Escalated**, you can change the preference value of the bid and resubmit it.

Submit multiple, grouped shift bids for a Full Schedule Period auction (for employees)

For a **Full Schedule Period** auction, select a *fixed* schedule for working and non-working days for the entire scheduling period. You *cannot* create a custom schedule for the scheduling period in this type of auction.

For only the **Full Schedule Period** auction, you can submit multiple shift bid requests that contain all your selected bid options. Depending on your auction configurations, you can group shift bid options according to similar attributes, such as the same shift start time and end time, non-working days, primary shift activity, and organization. This ability allows you to select bid options in bulk by selecting a group.

You can also set shift bidding preferences on a group level, rather than for each individual shift bid option.

Procedure

1. Go to **Request Management**. From **Schedule Auctions**, select **Bid Options**.
2. From the **Auction Name** column, select the auction you want.
3. From the **Employee** drop-down list, select the employee for whom you want to submit shift bid requests for a **Full Schedule Period** auction.
4. From the **Group Bid Options by:** drop-down list, select one of the following grouping options configured for your auction:
   - **Similar schedule**: Bid options are grouped if the shift start time and end time are the same for all days, and the schedule has the same non-working days.
   - **Similar schedule and primary activity**: Bid options are grouped if the shift start time and end time are the same for all days, the schedule has the same non-working days, and shifts have the same primary activity.
   - **Similar schedule and organization**: Bid options are grouped if the shift start time and end time are the same for all days, the schedule has the same non-working days, and the organization is the same for all schedules.
   - **Similar schedule, primary activity, and organization**: Bid options are grouped if the shift start time and end time are the same for all days, the schedule has the same non-working days, shifts have the same primary activity, and the organization is the same for all schedules.

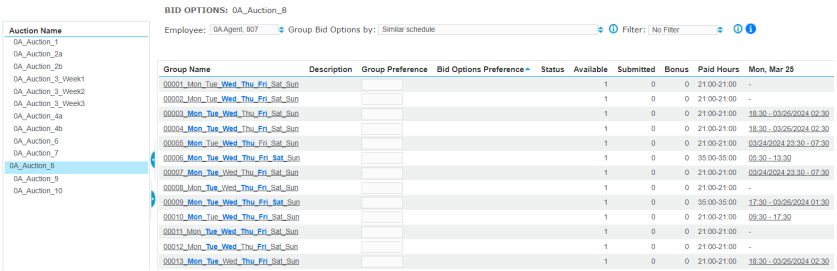
   > The grouping options that appear in the **Group Bid Options by:** list can vary, depend on your auction configurations.

   When you select a grouping option, the system groups the shift bid options according to your selection, and displays the name of each group under the **Group Name** column. The bold days of the week indicate the working days of the week. The non-bold days of the week are the non-working days.

   For example, for group 00001_**Mon**_Tue_**Wed**_**Thu**_**Fri**_Sat_**Sun**, the working days are Monday,

Confidential and Proprietary Information of Verint Systems Inc.

Wednesday, Thursday, Friday, and Sunday.



5. Optional. To limit the bid options displayed in the list, select a filter from the **Filter** drop-down list.

> If you change your filter settings without saving your preferences, *the system clears all unsaved preferences*. Therefore, make sure you select **Save Preferences** *before* changing your filter settings.

6. Optional. To view the skills required for shifts in a specific group, from the **Group Name** column, select a group.

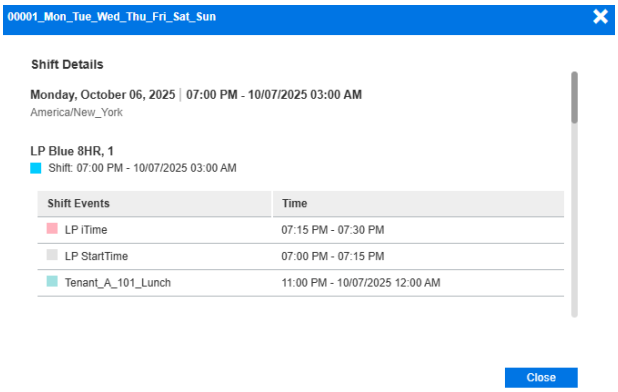
   For each shift template, the system displays the required skills and proficiencies. To return to the **Bid Options** screen, select **Cancel**.

7. Optional. To view the details of the shift assignments on a specific day for a group, select the day you want from relevant date column heading. For example, select the column, **Mon, Mar 25** to view the details of shift assignments on that day.

Submitted	Bonus	Paid Hours	Mon, Mar 25	Tue, Mar 26
0	0	39:00-39:00	5:00 PM - 03/26/2024 2:00 AM	1:00 PM - 10:00 PM
0	0	40:00-40:00	9:30 PM - View Details :30 AM	7:30 PM - 03/27/2024 4:30 AM
0	0	39:00-39:00	-	5:00 PM - 03/27/2024 2:00 AM
1	0	40:00-40:00	3:00 AM - 12:00 PM	3:00 AM - 12:00 PM
0	0	16:00-16:00	-	9:30 PM - 03/27/2024 6:30 AM
0	0	40:00-40:00	3:00 AM - 12:00 PM	3:00 AM - 12:00 PM
0	0	40:00-40:00	7:30 PM - 03/26/2024 4:30 AM	7:30 PM - 03/27/2024 4:30 AM
1	0	40:00-40:00	8:30 AM - 5:30 PM	7:30 AM - 4:30 PM
0	0	40:00-40:00	5:00 PM - 03/26/2024 2:00 AM	5:00 PM - 03/27/2024 2:00 AM
1	0	40:00-40:00	9:30 AM - 6:30 PM	9:30 AM - 6:30 PM

From the Shift Details window, for each shift template in the group, the system displays the time of the shift assignment on the selected day, and the list and times of the activities of the shift events that occur during the shift. To return to the Bid Options screen, select **Done**.

Confidential and Proprietary Information of Verint Systems Inc.



8. To enter a preference value for *all shift bid options in each group*, enter a numeric preference value in the **Group Preference** column for each group you want.

   For example, you enter **1** for your first choice, which is group 0001_Mon_**Tue_Wed_Thu_Fri**_Sat_Sun. This group has 35 available shift bid options. (The value, 35, is displayed in the **Available** column.) Therefore, you have 35 potential schedules that are your first preference.

   Alternatively, you can enter a preference value for each shift bid option in the group individually, *but this is not recommended*. To do this, select the group name of the group you want, and enter a preference value for each shift template in the group. Select **Save Preferences** and **Done**.

> To view all of your preferences in the **Group Preference** column at the top of the list, sort by the **Group Preference** column. To remove all submitted and saved bid options, and to enter new bid preferences, select **Clear All Preferences** and re-enter your preferences.

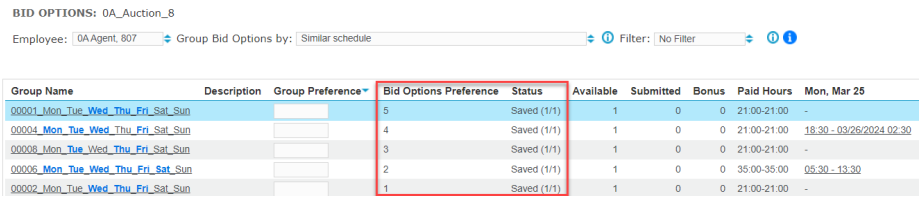
9. Select **Save Preferences**.
10. At the system prompt, select **Save** to save your preferences.

> If the organizational setting, **Max Bids Per Employee**, is set, and you have exceeded the maximum number of bids set for each employee, the system only saves the maximum number of bid options. The remaining bids are *not* saved. For example, **Max Bids Per Employee** is set to **100**. You have entered 103 bids. Therefore, the system only saves 100 out of the 103 bids you entered.

11. On the **Action Completed** screen, select **Done**.

    The **Bid Options Preference** column displays the preferences you entered for each group.

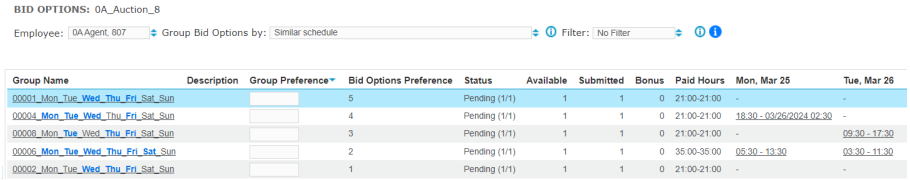
Confidential and Proprietary Information of Verint Systems Inc.



12. To submit your shift bid options and preferences, select **Submit Multiple Bids**.

> The **Submit Multiple Bids** option is *only* available after you select **Save Preferences**. In addition, if the auction requires a minimum number of bids, you must enter preference values for the required minimum or more number of bids.

13. After selecting **Submit Multiple Bids**, one of the following can occur:
    a. If you do *not* have saved or pending bid options, the system prompts you to continue. Click **OK**.
    b. If the organizational setting, **Enforce unique preferences**, is selected, and you have saved and pending bid options, the system prompts you to select one of the following options:
       - **Override previously selected bid options**: The system removes all saved and pending bid options, and saves your currently selected bid options instead. Each bid option has a unique preference value.
       - **Keep previously selected bid options**: The system maintains saved and pending bid options, and adds the newly selected bid options as well. Each new bid option has a unique preference value. Previously selected bid options are saved with their original preference values.
    c. If the organizational setting, **Enforce unique preferences**, is *not* selected, and you have saved and pending bid options, the system prompts you to select one of the following options:
       - **Override previously selected bid options**: The system removes all saved and pending bid options, and saves your currently selected bid options instead. The system saves the bid options with the group preference value.
       - **Keep previously selected bid options**: The system maintains saved and pending bid options, and adds the newly selected bid options as well. The system saves the new bid options with the group preference value. Previously selected bid options are saved with their original preference values.
14. View the **Bid Options** page, which is updated with your preferences saved for the submitted bids.



> After a bid is submitted and the bid status is **Pending** or **Escalated**, you can change the preference value of the bid and resubmit it.

Bid Options columns for grouped bid options (for employees)

When submitting *multiple*, *grouped* shift bid requests for the **Full Schedule Period** auction, specific columns are displayed that describe the shift templates available for selection.

Column	Description
Group Name	Name of the group, using the following syntax: **<consecutive number of the group>_<days of the week with the working days of the group in bold font>**. For example: • 00001_**Mon_Tue_Wed**_Thu_Fri_Sat_**Sun**: This group has the following working days: Monday, Tuesday, Wednesday, and Sunday. • 00002_Mon_**Tue**_Wed_Thu_**Fri_Sat_Sun**: This group has the following working days: Tuesday, Friday, Saturday, and Sunday.
Description	Description of the bid options in the group. If *all* bid options have the *same* description, that description appears in this column. If *any* of the bid options have a *different* description, the value, **Multiple**, appears in this column, indicating that the bid options have multiple descriptions.
Group Preference	Preference or priority value of *all bid options in the group*. This allows employees to set a preference for the entire group, as opposed to individual bid options. When you first access the My Bid Options page, there are no values in the **Group Preference** column, even if the bid options in the group were previously set with preferences. This setting allows you to select and prioritize all bid options in the group.
Bid Options Preference	Displays the preference or priority value of the bid options in the group in read-only mode. Note the following: • If no bid option in the group was selected, there will be no value for this option. • If one or more bid options in the group have the same preference value, this value is displayed. For example: 8. • If several bid options in the group have consecutive values, the system displays the range of these values, such as 1-4.

Confidential and Proprietary Information of Verint Systems Inc.

Column	Description
Status	Indicates the status of the preference for the shift bid group. • **(No status)**: None of the bid options in the group were saved nor submitted. • **Saved X/N**: Number of saved bid options in the group out of the total number of bid options in the group. • **Pending X/N**: Number of pending bid options in the group out of the total number of bid options in the group. • **Denied X/N**: Number of denied bid options in the group out of the total number of bid options in the group. When the group has bid options with different statuses, all statuses are displayed, such as: **Saved X/N**, **Pending X/N**, and **Denied X/N**.
Available	Number of available bid options in the group.
Submitted	Number of bids submitted in the group by all employees in the auction.
Bonus	Bonus points awarded if the employee works the schedule defined by the group. If the number of bonus points is the *same* for all bid options, the system displays the number for the group, such as 5. If the number of bonus points is *different* for various bid options, the system displays a range (X-Y), such as 5-10.
Paid Hours	Total number of paid hours for the group. If the number of paid hours is the *same* for all bid options, the system displays the number for the group, such as 40.00. If the number of paid hours is *different* for various bid options, the system displays the range (X-Y), such as 36.00-38.50.
Bid Rank	In auctions that use scoring, you can see a bid rank in the format of **x(x)**, where: • The first value is the employee's bid rank if the employee *does not* apply points to the bid. • The second value is the employee's bid rank if the employee *does* apply points to the bid. Example: **3(1)** or **3–6 (2-5)** When rank is the sort order, employees with the lowest number have the highest rank and the best chance of getting the shift they bid. NOTE: The **Bid Rank** column *only* appears if the **Use Scoring** parameter is selected under **Request Management**, **Schedule Auctions**, and **Settings**.
Sunday, Monday...(all days in the auction)	Starting with the current day, shows the shift start and ending times for each day. For the non-working days, the system displays the value: **-**.

Bid Options filter settings (for employees) (page 319)

Bid Options filter settings (for employees)

When creating a filter to exclude specific shifts from the Bid Options list, define specific filter settings.

Field	Description
Schedule	
Template Name	Name of the template assigned to the biddable schedule.
Availability	Number of instances of a particular shift template that have not yet been bid upon. Filter by: • Any Number of Options • Equal To • No More Than • No Less Than • Between This setting only appears if the **Group Bid Options by:** drop-down list is set to **No grouping**, or if the **Group Bid Options by:** drop-down list is *not* displayed in your environment.

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Group Availability	Number of available bid options in the shift bid groups. Filter by: • Any Number of Options • Equal To • No More Than • No Less Than • Between This setting only appears if the **Group Bid Options by:** drop-down list is set to a grouping option.
Schedule Length	Length (in hours) of a particular template. When selected, you can set the length according to time or paid hours. Filter by: • Any Length • Equal To • No More Than • No Less Than • Between
Number of working days	Number of working days in the schedule. The values include: • Any number of days • Equal to / Days • No more than / Days • No less than / Days • Between / Days For example, to select all schedules with no more than 4 working days, select **No more than** from this drop-down list, and then enter **4** in the **Days** field. To select all schedules that have between 2 and 4 working days, select **Between**, and then enter **2–4 Days**.
<Days in the auction> - You can set unique filter settings for each day in the auction. The following settings are available for each day:	

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Schedule	Defines the type of schedule on a defined day: • **Any schedule**: Defines that this date can either be a working day or day off. • **Working day**: Defines that this date must be a working day in the schedule. • **Day off**: Defines that this date must be a day off in the schedule. This setting allows you to filter the list according to the type of schedule on each day. For example, you can define that you only want to see working day schedules on 01/01/2024, day off schedules on 01/02/2024 and all types of schedules on 01/03/2024.
Shift Name	Name of the shift assigned to the biddable schedule.
Shift Length	Length (in hours) of a particular shift (the number of hours on a particular day). Filter by: • Any Length • Equal To • No More Than • No Less Than • Between
Shifts Starting	Shift start time. Filter by: • Any Time • At • Not After • Not Before • Between
Shifts Ending	Shift finish time. Filter by: • Any Time • At • Not After • Not Before • Between

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Activity Name	Name of shift events within the schedules. You can select up to two events, and filter according to the events in the shift. For example: • Break • CKA • Late • Learning Break
Length	Length (in hours) of a particular activity. Filter by: • Any Length • Equal To • No More Than • No Less Than • Between
Starting	Activity start time. Filter by: • Any Time • At • Not After • Not Before • Between
Skills	

Confidential and Proprietary Information of Verint Systems Inc.

Field	Description
Skills Associated with Shift	Allows you to filter the skills required for the shifts in the shift bid options that you want to view in the list. To select required skills for the filter, move the relevant skills from **Available Skills** to **Selected Skills**. Then, select one of the following options: • **At Least These Skills**: The skills required for the shifts in the Bid Options list *must include* the skills displayed in **Selected Skills**. There can also be *more* required skills for the shifts. • **At Most These Skills**: The skills required for the shifts in the Bid Options list *can include* the skills displayed in **Selected Skills**. There can also be *less* required skills for the shifts. • **Exactly These Skills**: The skills required for the shifts in the Bid Options list *must only be* the skills displayed in **Selected Skills**. There *cannot* be any additional required skills for the shifts.
